# THREE ATTRACTIVE VALUE-FOR-MONEY LIGHTWEIGHT PROPOSITIONS

## *The Quality Henley*

Built as it is throughout from components bearing such irreproachable names as Blackburne, Burman, and Brampton, this beautiful machine stands head and shoulders above the ordinary assembled lightweight by reason of its superb finish and detail refinement. The price too is attractive. Three-speed 2¾ Blackburne **70 Gns.**

## *The Big-Hearted Radco*

A machine of special appeal to the man who requires a sturdy, reliable machine, made by a firm with a first-class reputation, at the lowest possible price. The single-geared model at 34 gns. is the lowest priced REAL motor cycle to be bought, while you can obtain the same machine equipped with a Two-speed, clutch, and kick-starter gearbox for - - - - - **45 Gns.**

## *The Thoroughbred Excelsior*

A range of lightweights made by a firm with nearly half a century's reputation—each a leader in its particular class. Economy is a special feature of these machines—both to buy and maintain, while the finish is second to none on the road. I am in a position to supply a few only of these desirable little machines equipped with clutch and kick-start gearboxes and Villiers flywheel-magneto engines at the tempting price of - - - - - **£49 10s.**

*The only difference between these and stock machines is that 24" wheels are fitted in lieu of 26".*

An Opportunity for Enterprising Agents.

THE MOTOR CYCLE

Insurance Policies

**IMPORTANT AGENCY EXTENSION**

SERVICE to your clients should include the best and most reliable Motor Cycle Insurance Agency it is possible to obtain.

The Policies you recommend should carry a name that inspires confidence and gives an assurance of prompt and generous settlement of claims.

From your own point of view it is desirable that you should represent a company that enjoys the highest reputation among the motoring public, and be able to offer policies that are known to give complete and comprehensive cover.

**An extension of the Agency and Service arrangements for "The Motor Cycle" policies is now being made, and applications are invited from agents who realise the value of specialised experience and the importance of maintaining the goodwill of their clients.**

Here is your opportunity of handling policies that every motor cyclist knows and the value of which he fully appreciates.

MANUFACTURERS' STOCK

MAKINCOT BRAND

*TO BE CLEARED.*

Fawn double texture, interlined rubber,

MOTOR SUITS

**THESE suits are made of Fawn double texture cloth, interlined rubber.**

**The seams are cemented, sewn and taped, making these absolutely waterproof.**

**Will stand any amount of hard wear.**

**The jackets are made double-breasted, with belts and wind cuffs.**

**The overalls are made on the trouser pattern, fastening with clips and straps, and have wind gussets in leg.**

**These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear.**

Every suit is guaranteed absolutely waterproof and should these not meet entirely with your approval, we guarantee to return your money in full, if returned within seven days.

SPECIAL PRICE,

**29/11** Carriage 1/- extra.

We have also several thousands, heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemented seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof, and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The overalls are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

**Orders to be addressed—**

# Something really GOOD for you Motor Cyclists!

## REAL DUNGAREE OVERALLS

**4/6**

Pos.age 9d.

Not only will we refund the purchase money if these Overalls don't satisfy you, but also *all the postal expenses incurred by you in ordering and returning.* You won't lose a sou if they are not just what we say they are. Could anything be fairer than that?

Think a minute! When you're cleaning or overhauling your 'bus, what parts of your clothes get dirtiest? Trousers and shirt front, naturally.

**THESE OVERALLS, MADE OF REAL DUNGAREE** and *not* imitation twill, are just *the* thing for clothes protection. The trousers are ample, wide enough to slip on and off over your boots, and the six pockets, three front, two hip, and one behind the right knee, are perfect boons. They will stand any amount of wear and tear—don't forget it is *real* Dungaree—and are ideal for cleaning, overhauling, and bench work. Special Price **4/6**
Maximum waist, 38in. (postage 9d.)

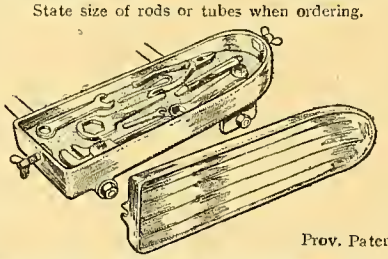
**KENNARD Bros., Ltd.** 11-31, North End CROYDON.

## NO MORE LOST or RATTLING TOOLS.

NEAT AND EFFECTIVE.

**PRICE £2 2s.** —— **Carriage 1/6.**

State size of rods or tubes when ordering.



Prov. Patent.

**BEAUMONT MOTORS (LEEDS), LTD., Cleopatra Works, Harehills, LEEDS.**

# The BRAMPTON Bi-Flex SPRING FORK.

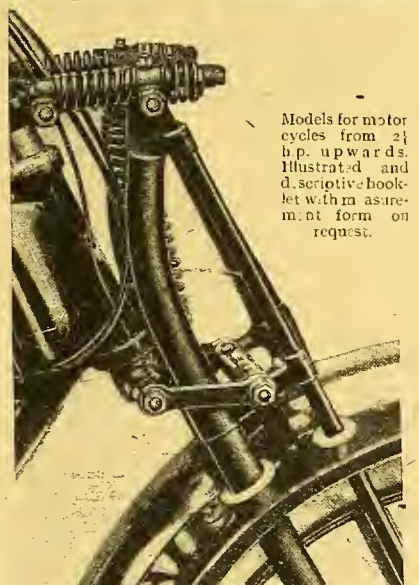
## It speaks for itself by the service it renders.

*Extract of unsolicited letter recently received from the rider of an 8 h.p. Motor Cycle fitted with the "BRAMPTON" Bi-Flex Spring Fork:*

"I may say that the Forks are the very finest I have ever ridden on, and I can keep up a higher pace on bad roads than I could on any other machine I have ever tried. When riding with friends, I have many times had to slow down owing to their inability to stand the bad roads, whereas I have considered the going quite comfortable. I shall specify your Forks on whatever machine I go in for next."

**The "BRAMPTON" Bi-Flex Spring Fork never tires—it is always instantly responsive to and completely absorbs within itself vibration and road shocks from every angle at which resistance is encountered, rendering the rider immune from discomforts which are otherwise impossible to entirely eliminate—ask a user.**

**BRAMPTON Bros. Ltd., Oliver Street,———BIRMINGHAM.**



Models for motor cycles from 2½ h.p. upwards. Illustrated and descriptive booklet with measurement form on request.

Secondhand Canoelet touring model in very nice condition, £8/15. Secondhand Empire touring model, with Easting windscreen and all fittings for Triumph, £9. Secondhand Sandum touring Elite Model, in perfect condition, body £6/10, complete with new chassis, £16/10. A large assortment of clips and fittings always in stock.—26, Tulse Hill, Brixton (2 minute from Brixton Skating Rink). 'Phone: Brixton 1292. [4395

## RUNABOUTS AND CYCLE CARS.

CARDEN 2-seater, late model; £58.—Miss Patmore, 106, Acre Lane, S.W.2 [4153

## RUNABOUTS AND CYCLE CARS.

REY'S, of Euston Rd. (Nos. 378-384), have the following in stock:—

MORGANS, all 1922 Models, also second-hand De Luxe and Grands Prix in good condition.

COVENTRY-PREMIER 1922 4-wheeler Model, £230; one shop-soiled, only £205.

ROVER 8h.p. Model, £220; two second-hand, good condition, £162/10.

G.N.'s, all Models; also 1920 with dynamo, very good order, £132/10; one 1921, £142/10.

EXCHANGES or deferred payments arranged.—Rey's, 378-384, Euston Rd. 'Phone, Museum 6436. [3996

WAUCHOPE'S, 9, Shoe Lane, London.—5-6h.p. Carden Monocar, £50. [4504

TAMPLIN, 1921, 8h.p., 3 speeds, all on, perfect; £85.—43, Avenue, Egham. [4232

GRAND Prix Morgan; £120; fully equipped, perfect order.—See, Ellam, Exchange Column. [4437

£20.—A.C. Sociable, 3-wheeler, 2-seater, good running but shabby.—King, Egrove Farm, Oxford. [4295

MORGAN.—New models in stock.—Agents, Birkenhead Motor Works, 9, Hamilton St., Birkenhead. [2389

SCOTT Sociable, delivered August, tax £4, paid.—Somerville, 30, Ormidale Terrace, Edinburgh. [3765

MORGAN Spare Parts.—Largest stock in London.—Maudes' Motor Mart, 100, Great Portland St., W.1. [4007

MORGAN De Luxe, 1917, M.A.G., lamps, Klaxon, speedometer, etc.; £105.—10, Lincoln St., Coventry. [3387

MORGAN, fully equipped, beautiful condition, any trial; £75.—Inman, Durham Rd., Seaforth, Liverpool. [3580

BEDELIA.—The new 1922 model 8-10h.p., air-cooled or water-cooled to choice. Immediate deliveries.

BEDELIA.—Air-cooled model, £185; water-cooled model, £195. Side-by-side armchair seats, 3 speeds and reverse, 5 detachable wheels, hood, screen, lamps, tools, jack and pump included. Trial free.

BEDELIA.—Cash or easy terms. Your old car or motor cycle taken part payment.

BEDELIA.—Catalogue free from L. N. Palmer, Sole Concessionaire for the British Empire.—Palmer's Garage, Tooting. [3994

8h.p. Rover.—1922 model in stock; exchanges.—Walbro Motor Cycle Co., Saffron Walden. 'Phone: 45. [7159

MORGANS Always in Stock.—The West of England Agent, Gibb, 100, Northgate, Gloucester. 'Phone: 852. [8127

GIBBONS Mark III. Cycle Car, 1921, splendid condition; £60 or nearest. — Wain, Cotton Rd., Potters Bar. [3536

COVENTRY PREMIER.—1922 model in stock; exchanges.—Walbro Motor Cycle Co., Saffron Walden. 'Phone: 45. [7160

1921 Morgan G.P., 10h.p. M.A.G. engine, most lavishly equipped; £140.—24, Balliol Rd., North Kensington. [3812

MORGAN, Grand Prix, w.c. J.A.P., hood, screen, lamps, discs, large exhausts; £95.—Swiss Cottage, Olton, Birmingham. [4340

MORGANS, New and Second-hand, always in stock; exchanges, extended terms; official agents, trade distributors.—Below.

MORGAN de Luxe 1921, w.c., M.A.G., acetylene lighting, horn, watch, etc., excellent condition; £155.—Below.

G.N. 1922, Standard and All-weather models in stock, dynamo lighting, dickey seat, etc.—Below.

ROVER 1922 8h.p. Model; £220; dynamo lighting, etc.; prompt delivery.—Elce, Ltd., 15-16, Bishopsgate Avenue, Camomile St., E.C.3. 'Phone, Avenue 5548. [0078

1921 De Luxe G.N., dynamo lighting, spare wheel, every accessory, any trial; £130.—24, Balliol Rd., North Kensington. [3811

1914 Duo Car, 2-seater, new hood, tyres, variable gear, completely overhauled; £45 or nearest.—Tomkins, R.A.F., Duxford. [3520

MORGAN, completely overhauled; £90; seen Thursday, 7 p.m., or appointment Sunday. — 209, Northend Rd., West Kensington. [3772

REY'S, of Euston Rd. (Nos. 378-384).—Morgans, G.N.'s, and Rovers, new and second-hand, several in stock. 'Phone, Museum 6436. [3997

WAUCHOPE'S. 9, Shoe Lane, London.—G.N. Cars, 1922, all models; easy payments or exchange. 'Phone: Holborn 5777. [4505

RITZ 10.5h.p. 4-cylinder light car, good mechanical order, 45 m.p.h., very economical, any trial; £150.—47, Hamilton Rd., Reading. [3800

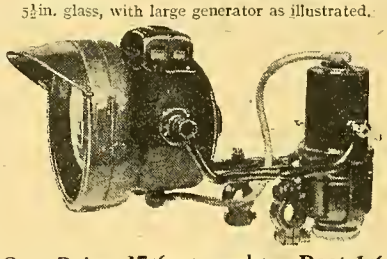
**TUBES,** brand new, all sizes at **6/6**; 700×80 at **7/6.**

### BRAND NEW LAMP SETS.

5½in. glass, with large generator as illustrated.



**Our Price 37/6 set complete. Post 1/6.**

LAMPS ONLY, **18/6.** GENERATORS, **15/6.** BRACKETS, **8/6.** WE ALSO HAVE A SMALL LAMP AT **12/6.**

(A client writes: "I consider them wonderful value.")

### BELTS in standard sizes. Post 1/- extra.

Clipper belts, ¾in.×6ft. 6in., at 9/9; 8ft. at 11/-; ⅞in.×6ft. 6in. at 10/-; 7ft. 6in. at 13/-; 8ft. 6in. at 13/6; 1in.×8ft. 6in., 16/-. Also Dunlop belts, ¾in. at 1/7 ft., ⅞in. at 1/10 ft., 1in. at 2/2 ft.

### DO YOU RIDE A DOUGLAS?

**We have in stock all spares, from a nut to a complete engine. We also have in stock a few rebuilt machines, containing 75 per cent. new parts enamelled to any colour to suit clients. All machines sold bear a three months' guarantee. Call and see them or write for full particulars and you will agree that no better value is on the market.**

**2¾ h.p., £52 10s. 4 h.p., £65.**

### SECONDHAND MACHINES IN STOCK.

**AMERICAN EXCELSIOR,** 1920, combination, 7-9 h.p., only done 800 miles. Easting screen and all on ..... **£95**

**EXCELSIOR,** 2-stroke, 2¼ h.p., late 1920, fully equipped and in splendid condition..... **£42**

**DOUGLAS,** 2¾ h.p., 1918, just overhauled, all on, in splendid condition..... **£36**

**We are also Agents for the SILVER PRINCE. 1922 Models can be had from stock, from 42 guineas. Write for leaflet.**

## RUNABOUTS AND CYCLE CARS.

WAUCHOPE'S, 9, Shoe Lane, London.—Carden De Luxe, 2-seater, 1921, electric lighting, fully equipped, tax paid, insured; £110. [4506

G.N. 1920, dynamo lighting, detachable wheels, speedometer; £135; good combination wanted.—132, High Rd., East Finchley, N.2. [3360

1920 Scott Sociable, fitted with new 1922 bevel drive, in perfect condition throughout; offers.—Hoyland, 18, Victoria Square, Bradford. [3521

8h.p. Duo car, J.A.P., Binks, Bosch, fully equipped, good running order; a bargain, £45; appointment only.—Shaw, Jeweller, Wellington, Salop. [4543

WAUCHOPE'S, 9, Shoe Lane, London.—New 1922 Morgans supplied on easy terms or exchange. 'Phone: Holborn 5777. List on application. [4507

CARDEN DE LUXE, 1921, dynamo lighting, hardly used, speedometer, any trial; £85.—Biss, 44, Sun St., Waltham Abbey. 'Phone: W.C. 299. [3834

MORGAN, 1920, Grand Prix, w.c. J.A.P. engine, just overhauled, disc wheels, fully equipped; £150.—6, St. Leonards Road, Waddon, Croydon. [3871

1921 Carden 2-seater, new August 20th, equipped, perfect, mileage 700, £80; offers considered, cash wanted.—Freeman, Union St., Winchester. [3832

MORGANS.—1922 De Luxe, Grand Prix, and Popular models in stock; exchanges.—Walbro Motor Cycle Co., Saffron Walden. 'Phone: 45. [7158

NEW 1921 Tamplin 2-seater, 8h.p., all complete; £125; cycles or combination taken in part exchange.—Percy and Co., 314, Euston Rd., N.W.1. [4179

1920 G.N., dynamo lighting, speedometer, 3 new tyres, overhauled at cost of £18, excellent condition; 120 gns.—Edwards, 101, Gt. Portland St., W. [4172

MORGAN, Aero, 1922, brand new, specially made, dynamo lighting set, cost over £230, unregistered; offers.—Maskell, 5, Brixton Hill, London. [4246

CYCLECAR Bargains.—De Dion chassis, 6h.p., 3-speed and reverse, good tyres, new gears, needs magneto and carburetter, £14. Van body for above, £2.

GRAHAME-White Cyclecar complete, less engine, gear box, brand new, with tyres and tubes, £12/10.—Derrington, Grafton Rd., New Malden. [4352

NEW and Second-hand Light Cars and Cycle Cars, all makes; good selection in stock; cash, easy payments, or exchange.—Service Co., 292, High Holborn, W.C.1. [0673

1921 G.N. Touring, dynamo lighting, spare wheel, speedometer, clock, lovely condition; £135.—Hillier (side bell), 9, Wallingford Avenue, North Kensington. [4266

1921 Morgan De Luxe, water-cooled, M.A.G., speedometer, clock, small mileage; £150.—Hillier (side bell), 9, Wallingford Ave., North Kensington. [4267

TAMPLIN 1920, all accessories, new tyres, good condition, tax paid for year; exchange for Morgan, or sell £84.—A. W. Smith, 26, Cope St., Coventry. [4319

8h.p. Humberette, overhauled, as new, complete lamps, tax paid, £90; another, in good running order, £65.—Rhind and Co., Stone Place, Rusholme, Manchester. [3551

BAYLISS-THOMAS, 1922 10h.p. model, 4-cyl. water-cooled engine, 3 speeds, Magdyno; 300 gns.; immediate delivery.—Godfrey's, Ltd., 208, Gt. Portland St., London, W.1. [0736

CARDEN 2-seater 1919, with hood, screen, lamps, etc., twin J.A.P. engine, 3 speeds; price £75, or exchange good combination.—Speechley, 86, Churchfield Rd., Acton, W.3. [4211

MORGAN 1920 Grand Prix M.A.G., acetylene and electric, speedometer, clock, aluminium dash, Dunlop Magnums, very smart, £145.—Clark, 7, Exhibition Rd., S.W.7. [3296

MORGAN De Luxe, M.A.G., water-cooled, late 1920, Lucas Magdyno, also acetylene, splendid condition, insured and tax paid; £158.—484, West Green Rd., Harringay. [3456

1922 Morgan Popular, £150; Grand Prix, £180; 8h.p. Rover, £220; in stock for immediate delivery; easy payments only 4% extra.—The Premier Motor Co., Aston Rd., Birmingham. [0773

1921 Morgan Aero-Special, 10h.p., M.A.G., dark blue, black hood, aluminium dashboard, cost £285, do 60, really pretty; £160, offers. — 61, Netherhall Gardens, Hampstead 566. [3508

1920 Emscott 2-seater, Lucas dynamo lighting, condition as new, insurance policy, tax paid; £145, exchange for good combination.—Rhind and Co., Stone Place, Rusholme, Manchester. [3550

CARDEN 1921 de Luxe Model, Rotax Igdyno lighting, large head lamp, trip speedometer, clock, hood, screen, perfect condition; £87, or nearest offer.—4, Taunton Rd., Bridgwater. [3367

HALIFAX.—Morgans, 8h.p., J.A.P., hood, screen, £85, £100, £110; 1920 8h.p. A.V. monocar, £75; 1920 2-seater Tamplin, £99/10.—Halifax Motor Exchange, Horton St., Halifax. [3987

## A Test or a Definition?

RATHER an unfortunate *contretemps* has marred the useful and deservedly well-supported A.C.U. one-day trial for stock machines.

Nine of the stock entries which otherwise apparently retained clean scores and in some cases made outstanding performances have not reaped full benefit because they did not comply with a regulation to the effect that front wheel stands were compulsory. Admittedly, the manufacturers concerned should have read the rules of the event more carefully, but just as surely should the A.C.U. have issued a warning before the trial started that these motor cycles, *selected from agents' or makers' stocks by the Union*, actually did not comply with the regulations. Much expense would have been saved the unfortunate makers—a stock machine trial means a greater financial expenditure than the ordinary type of event—and the public would have been better able to judge the merits of the various performances. From the official results published in this issue it is noticeable that the deficiency which caused the trouble was in every case discovered during the preliminary examination; it was therefore doubly unfortunate that the promoting body should have reserved its bomb-shell until after the event had run its course. It is doubtful, in fact, if the A.C.U. was in order at all in selecting machines which at a cursory glance did not comply with the rules.

The matter may, indeed almost inevitably will, be taken further with the assertion that the rule was quite an unreasonable one. Most of the erring nine were sports models, a title which usually implies a semi-stripped machine with many essentially "touring" features eliminated; the remainder were lightweights, which again implies an absence of weight and complication. The avowed purpose of the A.C.U. was to test the machines available for purchase by the public. Does it wish to dictate to manufacturers and the public in this matter? For, by its action, it recommends the public not to buy models which are minus front wheel stands.

The regulations referred to above are those of the F.I.C.M., but T.T. requirements omit the front stand; yet the T.T. races are to promote touring machines, and the present-day sports model is the roadster T.T. mount.

The trial as a trial was very well supported, was excellently organised, and demonstrated in a remarkable fashion the reliability of the standard motor cycle of to-day. Much of the good effect of the trial seems likely to be nullified by this eleventh-hour insistence on a regulation which certainly more nearly resembles an attempt to control design than to test existing types of machines.

This year Brooklands speeds have not been announced. The Union's reason for this omission may be perfectly justifiable, but speed figures form an item regarding which the average potential buyer positively craves information, and consequently we regret the decision.

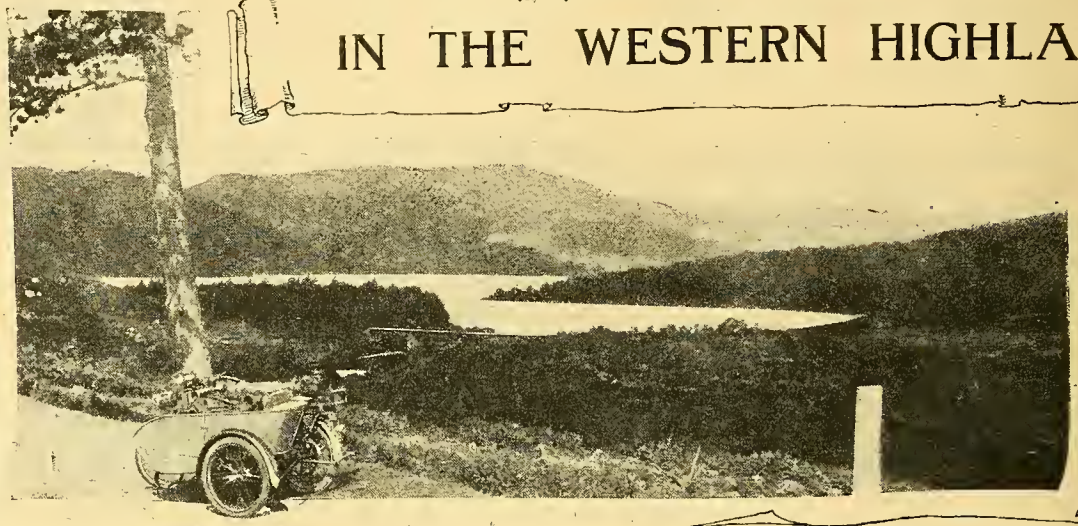
## Trials Booming.

FROM all indications, the competition side of the motor cycle movement is to enjoy an unparalleled boom this year. The two big Midland trials of early spring, the Colmore and Victory Cup events, each received over 200 entries, and in this issue we announce advance figures for the Land's End run and the Scottish Six Days Trials, which are very satisfactory, even without the last-minute additions which inevitably will come.

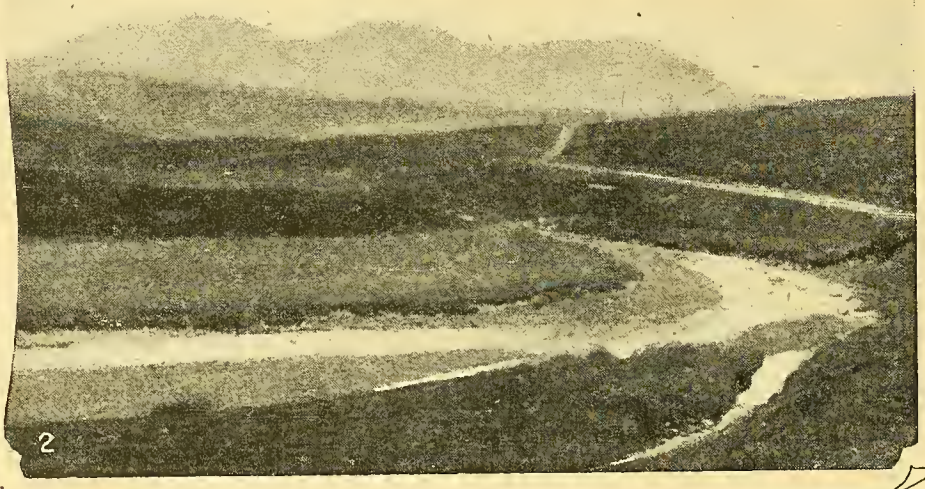
Private owners form not a small proportion of all the largely supported trials lists, and it is evident, freak hills notwithstanding, that the amateur keenly supports the sporting event.

An index to the advertisements in this issue will be found on the page facing the back cover.

# IN THE WESTERN HIGHLANDS



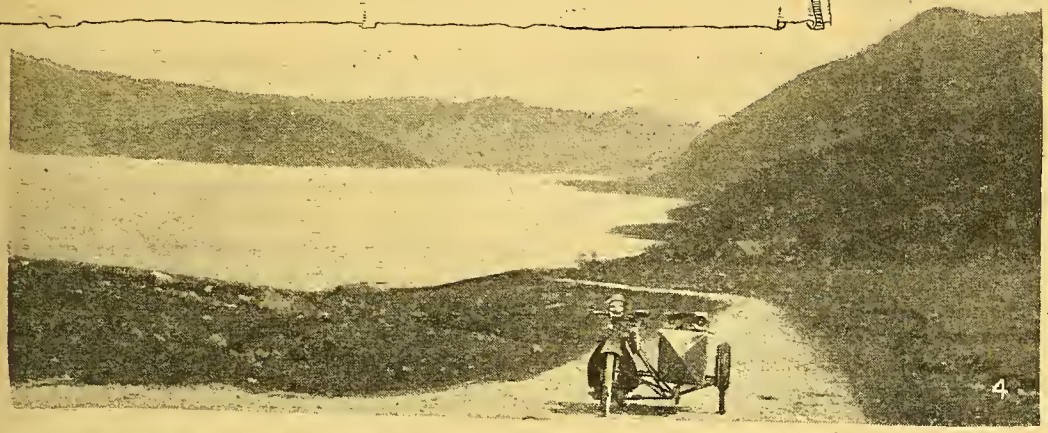
(1) Loch Garve. From this poin the traveller to the north-west bids good-bye to the railway line and branches off into one of the most remote regions of Great Britain.



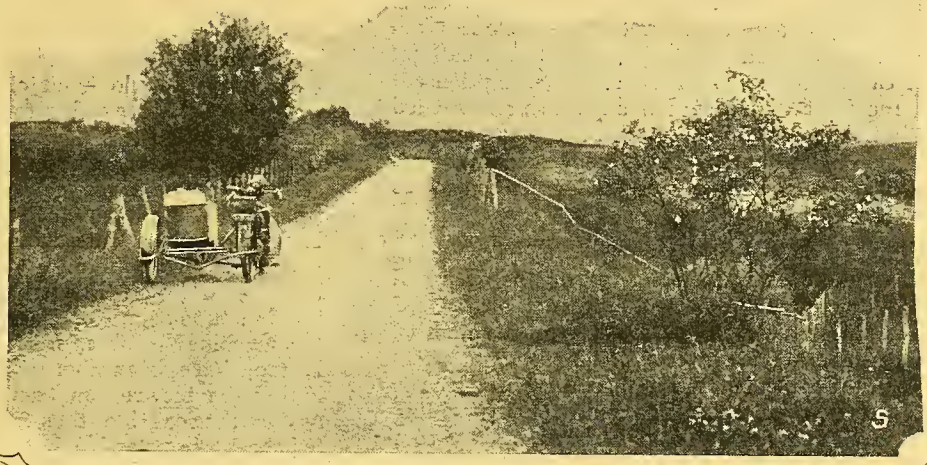
(2) The main road leads through desolate mountain and moorland scenery; habitations are few and far between. These mountains are in the heart of Ross and Cromarty, approaching the western coast, and a breakdown or accident in this district between thirty and forty miles from the rail-head, would be by no means pleasant.

(3) Rugged scenery on the coast. The small group of houses beyond the bend of the road is Dundonnel, a bleak and wind-swept hamlet, which in winter must be isolated for weeks. It nevertheless boasts one hospitable hotel.

# ITH A SIDECAR OUTFIT.

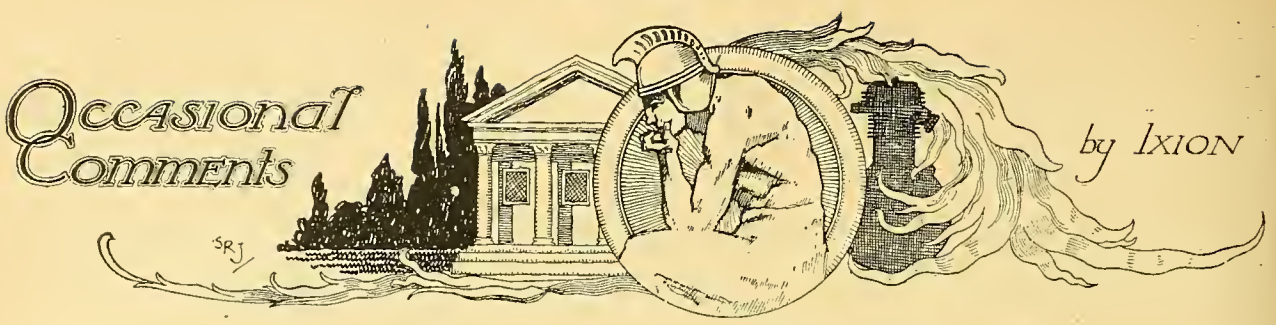


(4) Mountains and sea: another view of Little Loch Broom, on the shore of which lies Dundonnel. The few people who live beside this land-locked arm of the sea are quite forty miles from the nearest station and probably ten miles from the nearest telegraph office.



(5) This photograph, taken last June, shows wild-roses at the roadside, yet on the mountain tops were great drifts of snow (unfortunately scarcely discernible in the reproduction).

(6) On the shores of Loch Maree: one of the most famous of Western Highland lochs. The scenery is magnificent, being dominated by tremendous mountains rising from the water's edge. Maree is a fisherman's paradise.



### Jet Control.

TRUE to my principles, I have fitted a Sutton & Pocklington variable jet to my Ricardo-Triumph. The needle is calibrated to give the same range of jet openings as a full set of fixed jets varying from 28 to 36. As past experience had suggested, there are no compensating disadvantages whatsoever, the mechanism being reliable and leakproof. On the other hand, the control affords three distinct advantages on the positive side. Minor obstructions can be shifted by operating the needle violently. Maximum power and acceleration are instantly obtainable at desire. In ordinary pottering a small jet aperture can be utilised and the fuel consumption cut down. Incidentally, no special adjustment is needed to burn pure benzole, a variation of the jet opening meeting the circumstances. I am convinced that it is cost which prevents makers from fitting jet control as standard.

### An Air Cycle.

ONE of the evening papers dived off the deep end the other day with the tale of an "air cycle," in other words, an aeroplane for the man of moderate means. I let myself dream for a preparatory minute of widening the tarmac drive of Benzole Villa to serve as a landing ground, for the selling price of this 110 m.p.h. machine was only £100, and—what was more attractive to a bald old fogey like myself—the landing speed was guaranteed to be strictly moderate. Meanwhile, as I know just a trifle about costing, I wondered what engine was fitted. Towards the tail of the paragraph the mystery was solved. The engines are to be 90 h.p. R.A.F. bought up from the Disposal Board. Very nice engines, of course. But, as my typist said after she'd bought a 90 h.p. Mercédès car at an auction in the Euston Road, "It ain't so much what she cost, as the petrol she drinks." Really, these daily papers ought to keep a tame technician on their staffs.

### Strapping It On.

FROM time to time my placid soul is disturbed by a presentation trade sample of some motor cycling accessory contained in a leather case and designed to strap on to the handle-bar or carrier stays. Let me say once and for all that I will accept nothing of the kind, unless its strapping be of the order one finds on a twenty-guinea ocean trunk, and I strongly advise readers not to waste money on any motor cycling accessory disfigured by the sort of strap you see on a pedal cycle luggage carrier. Firms lacking in motor cycling experience are perpetually marketing gadgets with straps about half an inch wide and less than ⅛in. thick, composed of inferior leather, stitched with an inch or two of the flimsiest cotton, and weakened by a tiny rivet. Such attachments can be relied upon to fail within a week. The observant will notice that concerns with prolonged motor cycling experience suspect the most expensive strapping and evince a preference for metal clips.

### The Silly Season.

A MANCHESTER reader, who rides a big Yankee twin with no hand clutch, propounds the suggestion that, owing to the dry air in the States, machines weigh less there than they do here. Otherwise, he opines, nobody but Dempsey could ride certain Yankee twins on the kind of road which is freely illustrated in American motor cycle journals. His speculations date from an unintentional engine stop at a road fork on a 1 in 8 grade. One of his legs was occupied in applying the brake; the other was in action as a prop stand. Puzzle: how to restart the machine? His efforts ended in a purler. Well, I, too, have been there. I have been reduced to letting the bicycle run back and stub its rear wheel against the roadside, thus freeing a leg from the brake for the kick-starter. I have alternatively checked the machine by leaving a gear engaged whilst I put down the stand to act as a sprag during kick-starting. This is precisely why I insist on a hand clutch for all my rough-riding machines. In any freak trial one may watch weird acrobatics on the part of the foot clutch brigade when and if they get stalled on a bad grade.

### Miniature Sidecar Outfits.

LOTS of the new poor send me piteous inquiries anent 350 c.c. sidecar machines. They are unable to run to a 500 c.c. outfit, and wonder whether they can duplicate F. C. North's miraculous feats on a small two-stroke. Of course they cannot. An expert rider and tuner, handling a machine with all the resources of the factory behind it, must obviously get better results than any isolated duffer, though the results will only be fractionally better if the manufacturer is a thoroughly honest person. I always tell these inquirers that they can be very happy with a sidecarette if they are people of character. I myself prefer to lunch at the Carlton or the Ritz when I am in town, but, being an impecunious journalist, I make shift at an A.B.C. shop, and

**Occasional Comments.—**

resign myself to taking as much pleasure in deciding between poached eggs and a Welsh rarebit as the fur-coated opulents do in selecting their stewed ortolans and truffles (or whatever one gets at the Ritz). That is the whole point of these tiny outfits. They go, and go well. They are economical. They are *not* fast. They will *not* climb any hill. Years ago, *moi qui vous parle* used to drive a 2¾ h.p. tricar *avec jeune fille* (you mean *filles*?—ED.), single-geared, belt driven, automatic inlet valve, and that in one of our hilliest counties. I enjoyed it too. Just because I had enough sense not to envy too despairingly my wealthy neighbour, who ran a luxurious 7 h.p. Panhard with Roi des Belges coachwork and tulip rear seats.

## The Challenger Tube.

THANKS to a change of cover, I had a Challenger tube lying around my office last night and proceeded to demonstrate it to two incredulous visitors. The mere fact that I was prepared to inflict umpteen punctures on my own property no doubt carried a certain amount of conviction. I thought I had destroyed this by my first test, for I had such confidence in the tube that the weapon selected was the marlin-spike on a camping-knife—possibly half an inch in diameter. I thrust this well through the tread till its tip distended the inner periphery of the tube and then withdrew it. A nasty hiss followed; but even as my guests opened their mouths to crow at me, the hiss ceased, for with a vicious "plop!" a gobbet of black mastic surged up from inside the tread and sealed the hole, no material pressure having been lost. When more modest weapons, approximating to wire nails, were used, there was no hiss at all.

## Weight on Brooklands.

IT would be very interesting to know whether the secret tests of any Brooklands *habitués* have covered experiments with machines of varying weight housing similar engines. Within the last few days I have been conversing with two record-holders. One opines that weight is immaterial, except that a certain minimum is essential for comfort, as a bantamweight bounces so horribly. The other asserts that in the climb up to the back of the members' hill weight is a dominant factor; he goes so far as to prophesy that with engines capable of 6,000 r.p.m. or more it might pay to fit two close-ratio direct drives and to change gear for this ascent.

## A Very New Flat Twin.

QUITE recently I saw a new engine in a French cycle car, and for quite a time it baffled me. It was named the Kiddy—an air-cooled flat twin, on which no sign appeared either of the valves or transfer pipes. It was not a two-stroke, and how could it be a four-stroke? I had just decided it was an audacious dummy, when light dawned. It had overhead valves concealed beneath a finned aluminium cover, which looked for all the world like a pukka cylinder head. Two items which posed as mere holding-down bolts were hollow, and concealed internal push-rods. By the way, the engine of the new Crouch small car similarly hides its overhead valves under neat domed tops. Offhand, one would say that no amount of oil vapour would compensate for trapping the heat which comes off a cylinder head in such mighty lumps. So I hope that ere long the overhead valve type of air-cooled engine will have its valves enclosed as a matter of course, and then we shall be rid of the extra noise. Besides, these domed heads look far neater than a mere rocker box.

RUSSIAN PURCHASE OF BRITISH MOTOR CYCLES.

Twenty-five Matchless sidecar outfits have been purchased by the All-Russia Co-operative Society, at a price—in roubles—which defies calculation! Representatives of the Society were taken for a demonstration run over allotment ground, etc., in the neighbourhood of Woolwich.

Between Rhayader and Devil's Bridge, North Wales.

## The Question of Comfortable Seating; Petrol Consumption of Sidecars; and the 200 Mile Sidecar Race.

By "FRIAR JOHN."

NEARLY all sidecar manufacturers have succumbed to the craze for sporting and streamline bodies. Beauty and grace of outline are more easily attained in this type than in the old and more conventional pattern with the high back. On the stands at Olympia last November these "sporting" designs were dominant, and probably more attractive in appearance than any other style, but—they are neck creakers. For long journeys the lack of support for the back is felt keenly, and in cold weather they are not particularly warm. The cutting winds of spring-time whistle round the screen and catch the back of the neck and shoulders. One wishes for some sort of arrangement whereby the back of the sidecar could be lifted like that of a barber's chair. A "far-fetched" and crazy idea—but I am sure the adjustable back idea could be carried further than it has been up to the present.

OF course many firms have studied from every conceivable point of view the question of comfort, and have not fallen into the error of lowering the back of their touring models, but there are manufacturers who have done so, and the passenger's comfort has undoubtedly been sacrificed for smart racy appearance.

I have heard more than one "grouse" from purchasers of expensive cars on precisely the same point. To obtain the straight contour the height of the seat is lowered so that one is not sitting but reclining in far too recumbent a position for comfort. It is to be hoped that sidecar manufacturers won't overstep the mark in designing future models, and that in addition to their touring types particular care will be given to the contour of the passenger, as well as the contour of the sidecar.

THE question of upholstery, too, is one that needs ventilating. There is any amount of talk on chassis design, sidecar connections, and sidecar accommodation, but precious little about the inside of the body. It may not be a technical question, but after all the seat is a very important item. We pay anything up to £20 for a Chesterfield chair, and when we purchase one, we press the springs, we sit on it, the wife sits in it, we criticise its comfort, its height, length, width, and everything—but especially its comfort and the way it fits one. The salesman tells you how many springs there are in the arms—the arms, mind you, and yet when we buy a £30 or £40 sidecar, a perfunctory glance at the colour of the upholstery is all the majority of buyers give to that part of the sidecar. But they often hear about the body shape and comfort afterwards, especially if it is about the sixth outfit one has purchased. One's first sidecar is really like a first-born—it can do no wrong—it cannot be wrong. But many years' sidecarring makes one critical, and I have now a decided "grouse" about the short seat, poor finish, and faulty shape of the upholstery of many sidecars produced to-day.

I HAVE a friend living in the Midlands whose forebears must have been the hardy Norsemen. When the average sidecarist is muffled to the eyes with leather and wool, he sallies forth clad in thin, but rain-proof, clothing. How I envy him in the winter. Last week, combining business with pleasure, he started North for a little village near to Stirling. He rode a 1917 B.S.A. and sidecar carrying his personal luggage in the sidecar, together with salmon tackle and rods.

Ye gods! Salmon-fishing in the March gale. One can understand its fascination when the heather is in bloom. Yet as surely as the season opens on February 2nd are there enthusiasts ready for the opening. Yes, that old sidecar has carried some loads of fish and game in its time; the last time I rode in it the bottom was thick with jack.

A KEEN, one might almost say an acute, interest is being taken at the moment in petrol consumption of sidecars. Whenever this subject is brought up in the correspondence columns, sheaves of opinions and records follow, and the recent letters, whilst simply a recurrence of an old subject, have culminated this time in a proposed practical demonstration of the petrol economy of various sidecars. The question of legitimate or illegitimate intervention of the A.C.U. hardly enters here, however.

The great point of the whole matter is that motor cyclists should want to go to the trouble of organising such trials. That fact alone is significant, and

**Passenger Machine Topics.—**

of healthy significance, too. It is interest and enthusiasm that is wanted all the time, and the suppression of the suggested competition—even if it could be suppressed—would do no good whatever. The competitors, if members of affiliated clubs, might suffer, but that is their look-out. When Mr. A.J.S. Jones says he got 70 m.p.g. on a run down to Brighton, Mr. Two-Stroke Smith naturally wonders how it is he cannot do the same, having a smaller powered machine; he is quite willing to join in a competition if the conditions are not arduous, and he can take his wife, and possibly Jackie on the carrier. On the face of it the trial will be merely a "sporting" run of a new and interesting nature.

But when I ponder over the question I am less surprised at Mr. Loughborough's letter than I was when it first came to my notice.

◈ ◈ ◈ ◈

LAST autumn a friend, an enthusiastic sidecar owner, knowing nothing of stocks and shares, bought 5 per cent. War Loan when he sold his outfit, and so disgusted was he at the abnormal depreciation of his elaborate and expensive sidecar that he vowed he'd done with motor cycling altogether. He said he intended taking up golf instead.

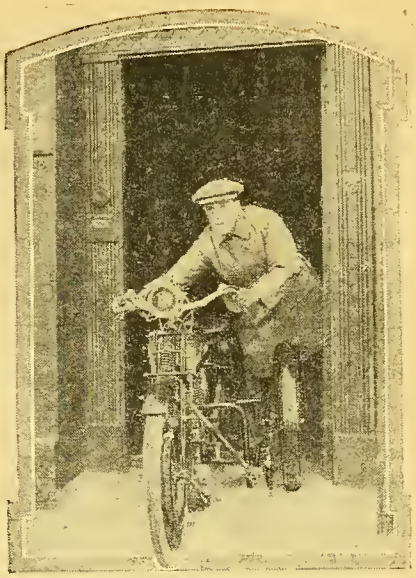
I met him, looking blithe and gay, in Great Portland Street yesterday, inspecting a second-hand sidecar outfit. Thanks to the "gilt edge" boom, he told me he had sold his War Loan at an excellent profit, but that it was no more than what ought to have happened, for he had lost pounds' worth of pleasure during the autumn and winter.

"Never again," he swore; then, as an afterthought, queried: "Ever been without a 'bus?"

"Not since 1906," I answered, "except, of course, during the——"

"Well, try it for a change; sell your 'bus and get some golf sticks. You may think you know the 'inestimable value' of the motor cycle—that's the proper touch, isn't it?—but you don't really. You know nothing whatever of the joys of possession until you are suddenly deprived of something that has become second nature to you."

JUDGING by readers' inquiries for experience with folding sidecar, greater interest is being taken in the question of storing the machine at home. On March 9th the Hopley folding chassis was shown on these pages, and probably the Paragon here illustrated is just as well known. This folding sidecar has stood the test of time and is giving satisfaction to many users. It is sold by The Wincycle Co., Ltd., 236, High Holborn, London, W.C.1.

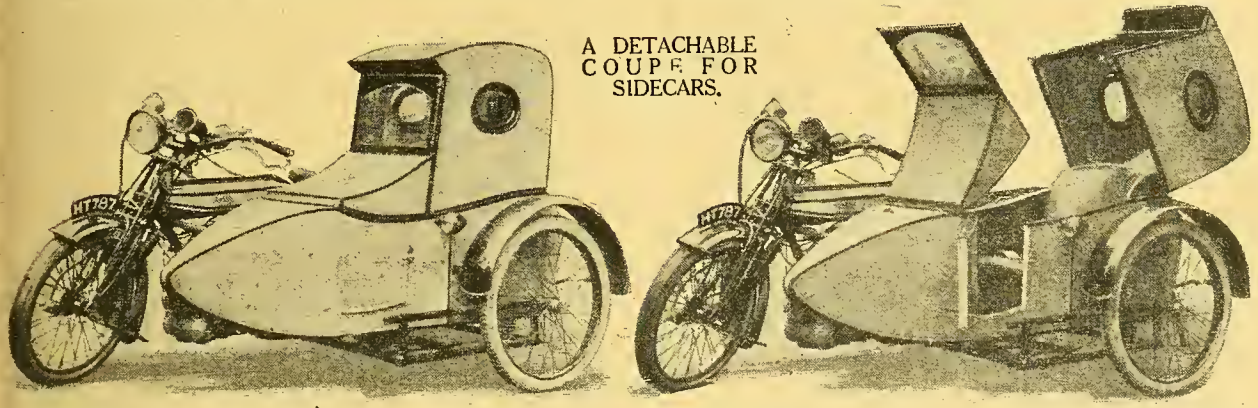


The Paragon folding sidecar attached to a 4¼ h.p. B.S.A. being wheeled through a doorway of ordinary width.

◈ ◈ ◈ ◈

ON June 17th a 200 mile sidecar race will be held at Brooklands—a race the strenuousness of which very few realise. Only a comparatively small number know what it means to ride 200 miles on end, even at ordinary touring speed, and fewer still have ever blinded 5 miles at 60 m.p.h. Many of us recollect a particular burst of speed of which we are proud, but which was probably spoilt by the fear of "something smashing," or "smashing something," or "being smashed," so besides being a great sporting event this race will be specially appreciated by the ordinary passenger machine potterer. Not only is it the first race to be held over such a long distance, but piloting a sidecar at 60 or 70 m.p.h. for 200 miles is no small feat of endurance.

## A DETACHABLE COUPÉ FOR SIDECARS.



Efficient protection for the sidecar occupant is the aim of the designer of the unusual fitting shown above. Mr. W. F. Baxter, the maker of Bax sidecars, of 14, Wells Road, Bristol, is marketing this coupé attachment, which converts a standard sidecar to a closed body in a few moments. The hinge upon which the hood turns back for entrance or egress is made with a draw bolt; on this being withdrawn the cover can be removed, the operation only taking a few moments. The cost of the coupé only, fitted and painted to match the sidecar, is from £10 to £12, according to the work involved.

# TUNING A 4 H.P. TRIUMPH.

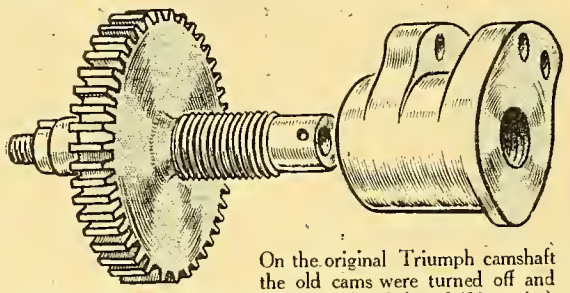
## Describing Engine Alterations which gave Speeds of 60 m.p.h. Solo, and over 50 m.p.h. with Sidecar.

(By K. H. Leech, A.M.I.C.E., B.Sc.E.)

MANY readers have from time to time requested further information of—not how the wizards of track or slide-rule tune or design for terrific velocities, but—how the ordinary private owner may succeed in adding 5-15 m.p.h. to the maximum of an ordinary touring machine. Owners of 4 h.p. Triumphs have in particular been very persistent with this query.

In February, 1920, the author purchased a W.D. Triumph, more or less renovated. The engine number was 54171, which proved that the machine was then just two years old.

A general overhaul was at once carried out, and a number of small parts were renewed. No alteration was made to the engine, and, with a sidecar, about 3,000 miles were covered before piston slap became annoying. Maximum speeds were: solo, 51 m.p.h.; sidecar, 42 m.p.h. The cylinder was re-ground, and a new piston fitted, increasing the "capacity" to 554 c.c. At the same time, the valve timing was checked over and found to be by no means efficient. Two complete sets of experimental cams were made, screwed with a left-hand thread on to the old cam wheel, from which the original cams had been turned off.



On the original Triumph camshaft the old cams were turned off and the new ones screwed on a $\frac{5}{16}$in. left-hand thread (26 per in.). Decompressor cam and lightening holes are also shown.

The relative timing of inlet and exhaust valves was varied during the experiments by "jumping up" the inlet rocker arm to a greater or a less extent. The overlap between inlet opening and exhaust closing was first made 10°, and this was gradually increased till as much as 45° was tried, *i.e.*, inlet opened 10° early, exhaust closed 35° late. This did not give quite such good results as smaller overlaps, and the final setting was fixed at 35°, the inlet opening 10° early as before.

The lift of the valves with the new cams was increased to $\frac{11}{32}$in. from $\frac{1}{4}$in., and, owing to various defects in workmanship, due to the alterations which had been made in the cam contours from time to time, the valve gear became noisy and also caused the fracture of two exhaust valve stems in rather quick succession.

The cam circles were then carefully trued up almost to the points where the "lift" of the cams started, about $\frac{1}{8}$in. being left raised about $\frac{5}{1000}$in. above the surface of the cam-circle. This was eased with a carborundum stone to form a relatively gentle "take-up" of the tappet clearance, somewhat on the lines of the Ricardo design, although the valves were in no sense "masked."

The improvement in quietness was very great, practically no tappet noise being audible over the first 1,000 miles after the alteration. However, now, after about 2,500 miles, a slight, not noisy, click has developed. The same process was tried on the standard cams of a friend's Triumph, with identical results.

Various contours were tried for the cams, and finally, after careful experiment and laying out on a drawing board, double size, profiles were obtained which gave a quick lift and fall to the valves, the rates and periods of rise and fall being identical for both valves.

This point may not be clear until it is explained that, with the Triumph design of rocker arm, an ordinary straight-faced cam will give quick rise and slow fall to the exhaust valve. The standard Triumph cam is slightly concave on the fall side, but the peculiarity mentioned can be noticed on any Triumph, nevertheless, and probably is partly the cause of the special characteristics of the Triumph engine.

The timing finally settled on, and the comparative standard Triumph figures, are as follows:—

| *Inlet.* | |
|---|---|
| New. | Standard. |
| *Open* 10° early. | Top dead. |
| *Close* 40° late. | 50° late. |
| *Exhaust.* | |
| *Open* 60° early. | 50° early. |
| *Close* 25° late. | Top dead. |

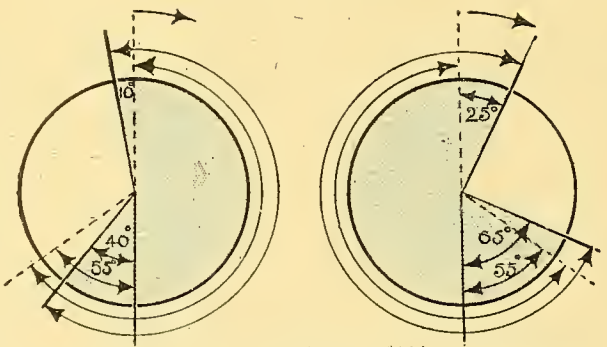


Diagram showing alterations to valve timing. The new cam periods are shaded.

These figures, of course, are only correct when tappet clearances are kept as small as possible.

The quick lift cams caused a rather objectionable "smack" in the exhaust note with the standard exhaust arrangement, and so a new long extension pipe of larger cross-section was brazed on to the silencer, the kick-starter crank being set outwards to clear the pipe.

**Tuning a 4 h.p. Triumph.—**

An experimental exhaust valve with a tungsten steel stem screwed into the head and riveted over was made and has now done over 1,200 miles without the slightest trouble, and is still in service. There is not any trace of burning visible, and the valve looks just as it did when put in.

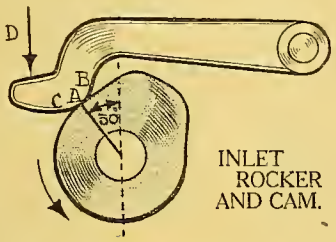
Other experimental fittings included a phosphor-bronze bush for the big end in place of rollers (but this was not satisfactory, and has been replaced by rollers and an oversize crank pin), lubricating the inlet valve stem by oil mist from the timing case (which has been entirely satisfactory) and a home-made extra air inlet, which was very useful, until the fitting of a Binks carburetter rendered it unnecessary.

One other alteration from standard is in existence on the engine, but this is not due to the author. It was noticed that the piston seemed to rise higher up the bore of the cylinder than on other Triumph engines examined, and the clearance volume was then carefully measured. This was found to be 132 c.c., giving a compression ratio of just over 5.1 as compared with the standard 4.8.

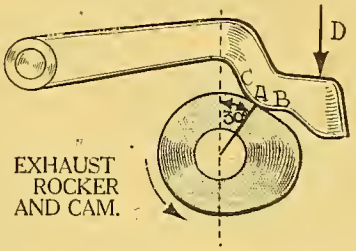
The higher compression of the author's engine renders it not very comfortable to drive on petrol, but undoubtedly improves the power output.

It is possible that someone, during the Army career of the machine, had the cylinder flange thinned down about 2 mm., or perhaps the core for the L head of the cylinder may have been misplaced during moulding.

A Binks carburetter was tried, at first experimentally, but after some trouble (and prejudice) had been overcome, the author was forced to confess that, although not quite perfect, it gave him great satisfaction, particularly as regards maximum speeds, and also from the point of view of economy and slow running.



As the rocker first is lifted by the cam the point of contact moves from A to B, slightly altering the leverage of the rocker and presenting a very unfavourable angle to lift the tappet at D; consequently the lift is at first very sudden. In descending, the action is the reverse, the point of contact moving first from A to C, and then back to A.



In this case, the point of contact in first lifting the rocker moves from A to B, and at B the angle of contact is better than at A. In descending, the point of contact moves first from A to C, and causes a quick drop.

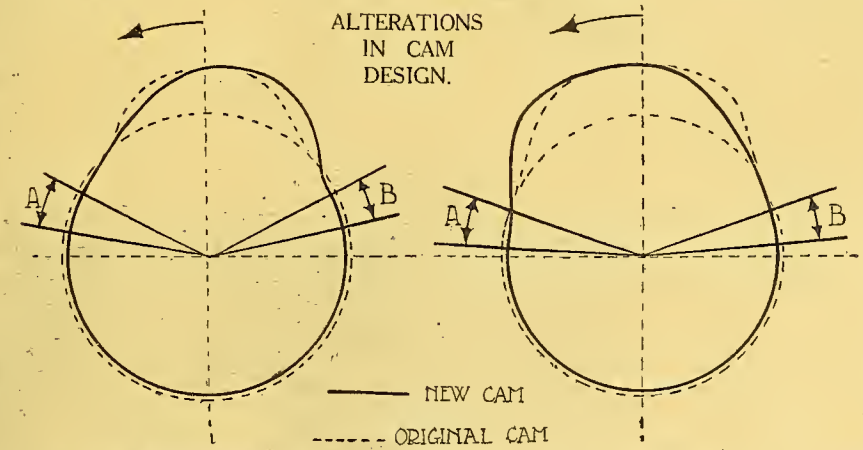
As regards the speed capacity of the machine, at present the maximum, in touring condition with a loaded sidecar, has been 51 m.p.h., this being the average of short runs with and against the wind, and being recorded by a moderately accurate Cowey speedometer; 40 m.p.h. has been obtained in second gear (8.15 to 1), also with sidecar, but usually the engine starts misfiring at 38 m.p.h., due either to the valve springs or the magneto contact breaker spring being insufficiently strong.

**60 m.p.h. Solo.**

Sixty miles per hour has been obtained solo, but no attempt has been made to exceed this speed on account of the special precautions which must be taken, although it is probable that at least another 5 m.p.h. could be obtained. However, as stated earlier, 51 m.p.h. was the maximum of the machine as it was taken over, so the modifications were responsible for a 20% improvement in speed alone.

It should be noted that it is not possible to sustain the "all-out" speeds for more than relatively short distances, or overheating occurs. This point forms the author's only serious "grouse," but in fairness to the Triumph Co. it must be emphasised that the engine runs quite satisfactorily cool under all ordinary circumstances, and that trouble of some sort must be expected if the engine is made to develop some 40% more power than the maximum it is designed for.

In conclusion, the author must confess that the task entailed in making and testing special parts and fittings, such as above described, gives him almost as much pleasure as ordinary touring, at any rate, in spite of his using a spring seat pillar and a 28in. × 3in. rear tyre, over present-day roads. He believes that there is only one other 4 h.p. Triumph in existence which actually reaches the mile-a-minute gait against the clock, and the fact is of considerable satisfaction, much more than if he had purchased a sporting model with a guarantee of express train velocities.



New inlet (left) and exhaust (right) cams showing alterations made to secure correct harmonic rise and fall.

Left: A shows the gentle rise to take up tappet clearance without opening the valve appreciably; B shows the gentle fall.

Right: Actually the exhaust is arranged to give a more rapid lift than "simple harmonic," the rocker angle permitting this.

In both cases the backing-off of the cam circle is exaggerated.

# Official Test of Stock Machines.

Two stock outfits driven by N. Hall (2¾ O.K. sidecar) and A. G. Cocks (4½ Beardmore-Precision sidecar) ascending Kop Hill—probably the worst climb in the trial.

## Out of 108 Starters only 1—a Motor-assisted Bicycle—retires. 34 Stock Machines secure Premier Awards, 33 Non-Stock Motor Cycles obtain Maximum Marks, 22 Penalised for not having Front Stands.

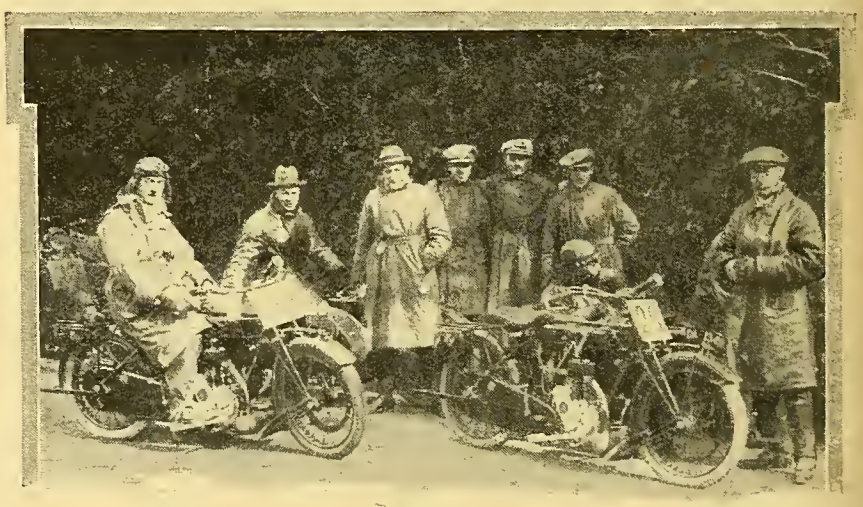
SIX-THIRTY on a cold, grey March morning is early for the start of a trial, and more than one "sluggard" among the competitors in the A.C.U. One Day Trial on Wednesday of last week was "heard to complain." Nevertheless, the immediate prospect became brighter when it was discovered that the Wolseley Motor Co., in whose Ward End (Birmingham) Works the machines had been parked overnight, had courteously opened its canteen for the benefit of competitors. An excellent hot breakfast cheered the sleepy riders, and a few minutes before the official starting time there was an air of bustle about the big shed in which the machines were stored.

On the previous day all machines had been weighed, filled up, and stored, while stock entries had been allowed an hour's testing about the Works' roads, under strict observation.

### Affected by Engineering Lock-out.

In many instances, stock machines arrived by lorry, and of these the Martinsyde contingent must have had a long journey. Amongst the non-starters one or two were members of the A.E.U., who were therefore prevented from riding on account of the engineering lock-out. No very startling features were to be found amongst the competing machines, but the modern tendency towards light sidecar outfits was well exemplified by such entries as E. Williams (stock 2¾ A.J.S. sc.), N. Hall (stock 2¾ O.K. Junior sc.), G. Francis (2¾ Francis-Barnett sc.), and G. E. Cuffe (2½ Metro-Tyler sc.). Almost a new-comer to competition work was the Barr and Stroud-engined Royal Scot, a promising performer, hailing, as might be suspected, from north of the Tweed. The 5-7 h.p. McKechnie Victor sidecar entered by F. Becker attracted considerable attention, and interest was also shown in the Zenith-Bradshaw flat twins, the o.h.v. Triumphs and Douglases, Mrs. Janson's Ner-a-car, the 4¼ h.p. Beardmore-Precision, and the plucky entered 1¾ h.p. Young cycle attachment, which, however, did not check in at Oxford.

Dry roads and an easy course favoured the chances of the small machine, but it must be remembered that the stock machine trial is intended to be within the powers of *all* classes of self-propelled motor cycles and three-wheelers.



Competitors outside the Oxford check. R. Brown (4½ Sunbeam sidecar) on the left, with J. E. Greenwood (4½ Sunbeam sidecar) on the extreme right.

**Official Test of Stock Machines.—**

The course was admirably marked with blue stain and arrows, and apart from rough surfaces there was no obstacle of note until the Kenilworth watersplash. Even here the surface has been improved quite recently, and though moderately wide, the ford is so shallow that it can be crossed with ease by the smallest belt-driven machine.

### Sunrising Easy.

On to Warwick the roads were rough, but soon a temporary improvement took place as the Gaydon and Kineton route was followed to Sunrising Hill. So well known is this hill, and so excellent the surface, that even the acute right-handed corner provides no obstacle to the modern motor cycle. There were but two failures while we were present, and these were both caused by misadventure rather than by lack of power. Greening's stock T.B. stalled momentarily when well past the worst of the hill, owing apparently to a missed gear change, and A. Cocks (stock 4¼ Beardmore-Precision sc.) failed just after the corner owing to a faulty plug. On restarting, however, he made a good climb. F. Becker (5-7 McKechnie-Victor sc.) stopped at the foot of the hill, but came up well, and C. Barham (2¾ Warnes) appeared to be in serious trouble, since he only just surmounted the gradient, and his engine sounded very "woolly." The Young attachment made a fine climb with pedal assistance. For the rest it is impossible to distinguish between many excellent ascents, especially as some riders were quite obviously saving their engines for Brooklands.

It is necessary, however, to say a word in praise of the fast, silent climbs made by the brothers Brandish, both mounted on flat twin Humbers. All the little side-car outfits climbed well, but special praise must be given to G. I. Francis (2¾ Francis Barnett sc.).

### Consistent Performances.

Towards the end of the list came the familiar figure of F. A. MacNab on the new 6 h.p. Trump, a sporting-looking twin, which made a fine climb. Three-wheelers, sidecar outfits, heavy and light, and solo machines all climbed consistently and well.

Since stops were not penalised and the time margins were reasonably wide, competitors took full advantage of the allowances. Indeed, it seemed that the regulations were too lax, for there were instances of two or three competitors stopping to assist a friend in difficulties, and on at least one occasion a competing machine emerged from a roadside workshop.

With the exception of one rough and tricky little hill near Lidstone, which was too short to cause trouble, the road to Oxford presented no difficulties. True, by-roads were the order of the day for most of the distance, and a stretch of undulating road with rutty surfaces near Hook Norton was termed by some a colonial section.

In spite of easy routes, there are always a few unfortunates, and before lunch we noticed H. Reyre (3½ Ariel), G. Francis (2¾ Francis Barnett sc.), and E. A. Barnett (stock 2¾ Francis-Barnett) all in trouble with their tyres. M. O. Reilly (5 N.U.T.) was apparently in difficulties with his clutch spring, J. Caslake (8 Brough Superior) had his tool-bag out near Chipping Norton, and G. E. Cuffe (2½ Metro-Tyler sc.) suffered continuous belt trouble, and, in consequence, ran out of petrol. A.A. and R.A.C. scouts were in evidence throughout the morning's run, and the organisation of the lunch control, carried out by the Oxford University M.C.C., was beyond criticism.

Top: Col. Lindsay-Lloyd despatching W. T Woodcock (3½ Ariel) on the track test at Brooklands, while J. Bishop (2½ Sun-Vitesse) awaits his turn. Centre: School children at Thame cheering on W. B. Gibb (4 Douglas sidecar). Bottom: An unofficial check at Oxford to F. C. Townshend (3½ Zenith-Bradshaw).

### After the Lunch Interval.

Lunch at Oxford occupied only a brief interval in the run, and before noon the earlier men were on their way again, passing through Wheatley, Thame, and Chinnor. From the last-mentioned village a detour was made to include a long by-road hill, which even without a fairly acute hairpin bend midway up was certainly not a top gear climb.

Both for sheer speed and neat driving on the corner, H. F. S. Morgan, on a stock £150 Morgan three-wheeler, was probably more conspicuous than any other entrant, but only a novice on an underpowered, out-of-condition machine might reasonably have been expected to fail entirely at this point.

Kop Hill (Princes Risborough), some six miles further on, provided considerably more incident, and quite a creditable turn-out of spectators made very interesting comparisons of the hill-climbing capabilities of the stock machines in particular.

### Performances on Kop.

The hill, it should be explained, is no longer regarded as worthy of inclusion in any modern trial in which hill-climbing failures are relied on to find a winner; it is, however, a very popular grade for speed events, and has been scaled at 60 m.p.h. on more than one occasion. The average private owner of the average 3½ to 4 h.p. solo machine nowadays would feel dissatisfied if he failed to get up on second gear. Therefore, one or two of the performances on Wednesday were by no means inspiring. W. B. Gibb (stock 4 Douglas sc.) broke his belt before reaching the most severe portion, returned to the foot, and made quite a good ascent at a second attempt. On a 3½ h.p. model of the same make, also stock, J. A. Newman, much ahead of time, made a very cautious climb. J. Donaldson's stock 2¾ h.p. Royal Scot evoked very favourable comment, especially on the score of silence, the B. and S. sleeve-valve engine being almost inaudible. Unlucky "13," S. Jones (stock 2¼ Levis) got into difficulties, and neither zig-zagging nor clutch slipping postponed the necessity for vigorous foot-slogging.

Then Eric Williams's stock A.J.S. lightweight outfit pegged up manfully, excusably with little in hand, but before the issue was decided Kaye Don (stock 3½ Norton) synchronised his 30 m.p.h. swoop past with a slight deviation from the straight path on the part of Williams; both stopped, the solo man very forcibly some dozen hectic yards higher up. He very pluckily restarted and carried on.

Next to fail was the stock L.S.D. three-wheeler driven by C. Swain. As a result, A. G. Cocks (stock 4¼ Beardmore-Precision sc.) was baulked and was quite unable to make an unaided restart on the gradient.

### Fine Climbing by Stock Machines.

The remainder of those in the stock class were all successful, particularly fine climbs being made by the three 4½ h.p. Humbers, G. Dance's Sunbeam, G. H. Kirby's o.h.v. Triumph, Bert Kershaw's 2¼ h.p. New Imperial, and the 6 h.p. Martinsyde outfit by W. H. Bashall.

At one time the track was alive with competitors, but very little racing took place. Here are shown F. W. Giles (7 A.J.S. sidecar) P. Pike (2¼ Levis), Eric Williams (2¼ A.J.S. sidecar), H. Holmes (8 Morgan), and C. F. Knott (2¾ Raleigh).

Only one of the non-stock entrants failed, H. H. Beacon (2¼ New Imperial), but on the whole the performance here by no means outshone those who were handicapped by too new engines. Two o.h.v. Triumphs, a Brough Superior, and Belfield's Harley-Davidson, and Bucknell's Matchless sidecar outfits were outstandingly fast. Mrs. Janson (2¼ Ner-a-Car) looked worried, but made a sure climb, especially commendable if the gear ratios were standard.

Perhaps owing to its moderate price, a large number of potential purchasers displayed considerable interest in the 2¾ h.p. Raleigh, the two examples of which made highly creditable ascents of Kop Hill.

The main road climb out of Great Missenden was also observed, but again spectators and observers had a tedious time, and might almost as usefully have taken up vantage points on the flat. Another rise on the Beaconsfield side of Amersham proved responsible for only one failure, L. F. Peaty (stock 4¼ Hawker), whose engine was reported to have dried up.

Thereafter it was good going to Brooklands, so good that we trust that the scores of police who lined this portion of the route held broad-minded views on speed limits! As it was, a great many of the competitors found time for a tea stop in Weybridge before entering the track.

### Too Many Punctures.

Punctures were even more common during the afternoon's run, and we can only hazard that the popular standard sizes of tyre are not up to competition work. The precautionary luxury of oversize tyres was obviously sadly missed by those who regularly ride in the conventional reliability trials.

There was too much "tinkering" on the part of competitors. Nearly all stopped at Weybridge, and in many of the towns on the routes it was no uncommon sight to see competing machines receiving attention outside garages.

### Well-organised Speed Test.

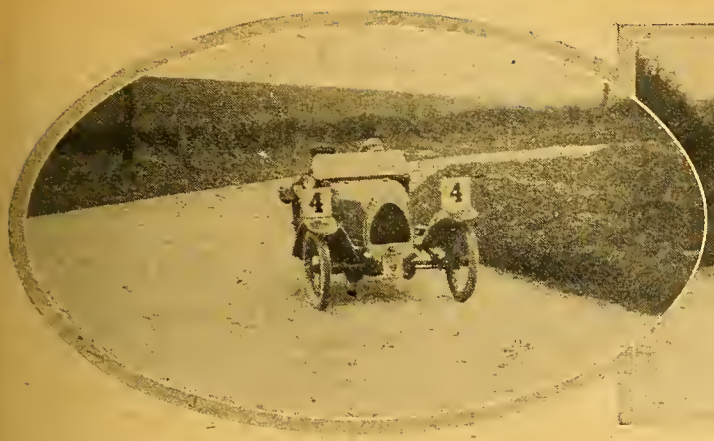
The twelve-lap speed test on Brooklands Track was very well organised, and confounded the pessimists by the regularity with which the stock entries completed the distance successfully. W. L. Handley (stock 2¾ O.K. Junior) was very unfortunate; first a link of his front forks came adrift, and, having repaired this, his belt broke on attempting to restart. Another to meet adversity on the last lap was H. R. Davies (stock 2¾ A.J.S.), who was towed into the paddock owing to an inlet valve cotter shearing.

To help the competitors to count their laps, a special tie-on label bearing twelve numbered slips was supplied to each man; but quite a number disdained any aid to memory.

The P. and M. riders, unfortunately, tore off one slip too many, with the result that they lost their awards through not having completed the twelve laps.

It was amusing to see George Dance (Sunbeam) sitting up wearing a bored expression, and doing a mere 40 m.p.h. Restraint was evident, but temptation was great.

H. W. Hassall's Norton was knocked over in the paddock before the speed test and the front wheel was buckled. Nevertheless, he pluckily carried on.



S. M. Greening (T.B.) turning off the main Oxford-London road towards Thame.

G. M. Townshend (4¼ P. & M. sidecar), the first man to start, climbing the hill into Woodstock.

# SPRING FRAMES.

## A Review of the Systems Employed in the Rear Suspension of Motor Cycles.

WHEN motor cycles are sprung more or less from end to end the springing may be divided into three classes.

(1.) That in which the whole frame except the rear wheel attachments, sometimes including the carrier, is sprung.

(2.) A method of springing applied to the driver and the principal parts of the mechanism, the rear wheel being mounted in a rigid part of the frame extending to the head.

(3.) A partly duplicated frame providing spring suspension for the saddle and footboards or footrests.

Most spring frames come into the first class, and herein they follow the lines laid down by car designers. The difficulties to be overcome lie in making the rear wheel rigid laterally and in preventing a snatch in the drive which may be caused by variation in the distance between the driving centres or a large difference in the size of the sprockets when chain drive is employed.

### Defining the "Sprung" Portion.

That part of the frame which is supported on springs must be regarded as the sprung part. This seems very obvious, but some people call this part of the frame the rigid part and refer to the wheels as sprung, a fact which has caused more than one small argument with attendants at Olympia. Incidentally, it is not strictly correct to speak of a spring wheel sidecar, for it is the sidecar chassis that is carried on a spring, but the term is well known and convenient, and for the sake of clarity it may be desirable to use it again.

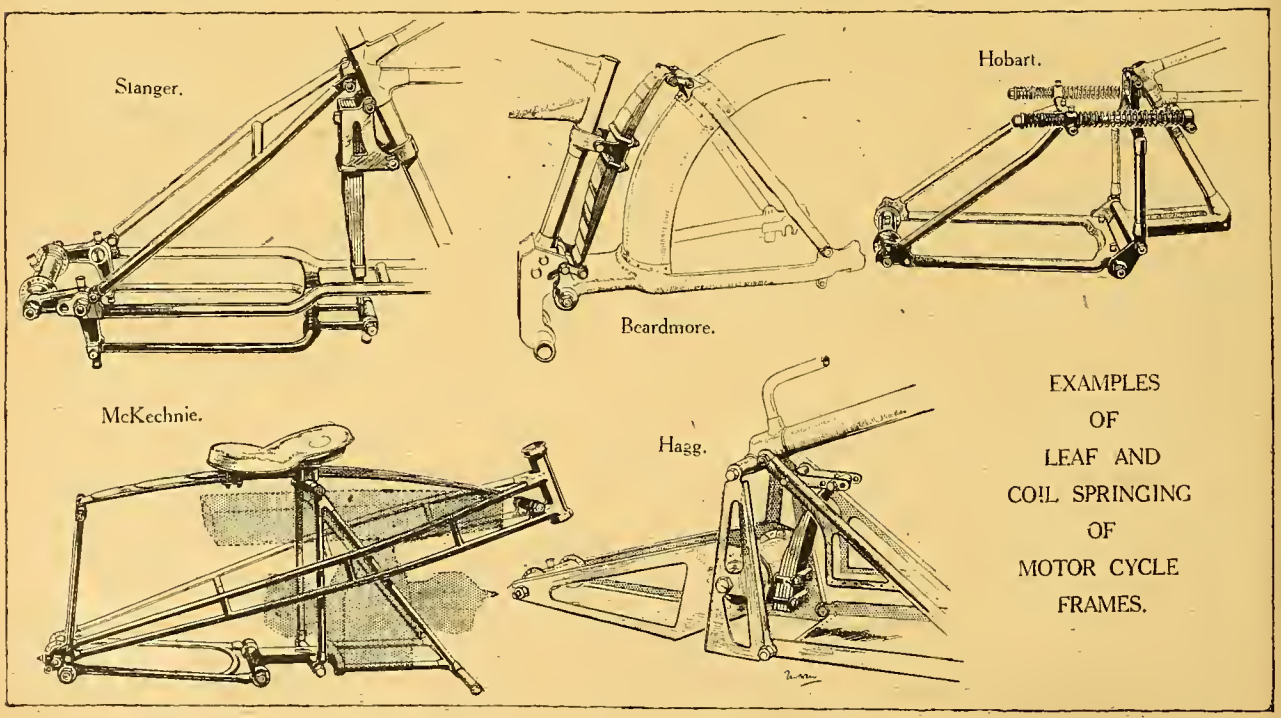
In a general way it may be stated that a spring frame is best designed as a whole with the front and rear springing on the same lines, though excellent results can be obtained by combining rear springing with a good proprietary spring fork. A good example of the first mode of construction is to be found in the Beardmore-Precision where the cantilever principle of laminated spring is used throughout. In the rear suspension of this machine the cantilever spring retains its usual form, and is hinged behind the tube from the saddle to the countershaft just below the tank; the upper end sustains the thrust from the rear wheel and supports the weight, and as the spring is in a position not far from vertical it is well placed to give lateral rigidity to the wheel.

### Quarter Elliptic Springing.

The Raleigh motor cycle has quarter-elliptic springs extending rearwards from the saddle, and is further notable for a duplex frame throughout and the very neat way in which the chain case is fitted so that it shall not interfere with the movement; the rear mudguard is in two parts, one being unsprung. The fork in this case is the Brampton Biflex.

Quarter-elliptic springs are also found both in the front and rear suspension of the Indian and the Royal Ruby. In the latter machine some adjustment is allowed for weight, and the frame can be locked rigid when required. The Indian springs terminate in curves which improve their resiliences at the expense of lateral rigidity, but doubtless this is sufficiently provided in the construction of the fork joints.

The A.B.C. method of rear springing gives a minimum number of joints, for the springs are anchored



EXAMPLES OF LEAF AND COIL SPRINGING OF MOTOR CYCLE FRAMES.

**Spring Frames.—**

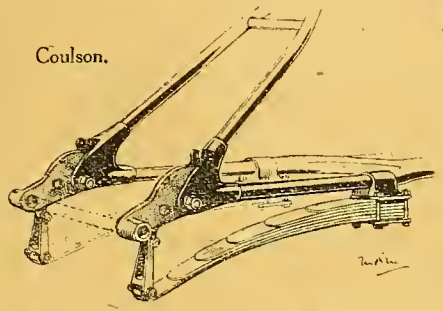
at each end, and, in fact, consist of a pair of quarter-elliptic springs joined together at the thin end to form one complete spring on each side. These in themselves would give good rigidity laterally, but the wheel is also carried in a single fork on two roller bearings placed wide apart. The other two joints are near the rear axle and have a very small movement. Front and rear springing are synchronised, and the result is a very comfortable machine.

### Coil Springs.

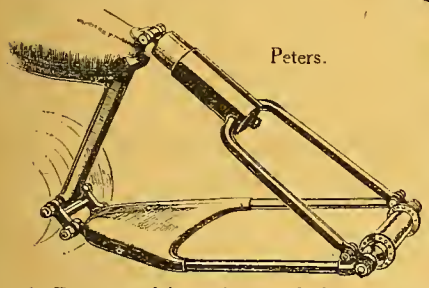
The P.V. is a well-tried device consisting of a fork carrying the rear wheel, and hinged near its ends to the back of the main frame. These ends carry the wheel, and the centre part projects into the down tube which is suitably curved and contains springs to control the movement. Adjustment for weight is possible.

The Matchless spring frame is supported on coil springs. These have the advantage of lightness, but they require the use of more jointed tubes than leaf springs. The design is, however, a very good one, and makes a fine outfit with the special sidecar provided.

Coulson.



Peters.



The Hobart and Dot machines have their rear wheels mounted in triangular frames hinged behind the countershaft and supported by coil springs. The Hobart has four springs, two to carry the weight and two to check the rebound. The Dot incorporates a curious feature in that the saddle is carried on a long semi-elliptic spring, one end of which is supported on the sprung part of the frame and the other end on the unsprung part. Proprietary forks are used on both these machines.

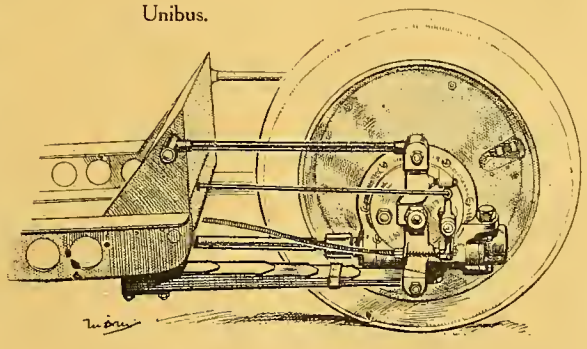
### Novel Methods.

The rear wheel of the Hagg Tandem is carried in a strong pressed steel frame hinged near the countershaft and controlled by a short stout quarter-elliptic spring. This is combined with a Brampton fork.

That new and original machine from the Isle of Man, the Peters, has forks on the "hinged" principle but controlled by an enclosed leaf spring; the rear part of the frame is carried on coil springs working inside a barrel below the saddle.

The Coulson relies for its rear springing upon a combination of links and leaf springs lying below the lower members of the rear part of the frame, and the Unibus is supported like a little car upon quarter-elliptic rear springs.

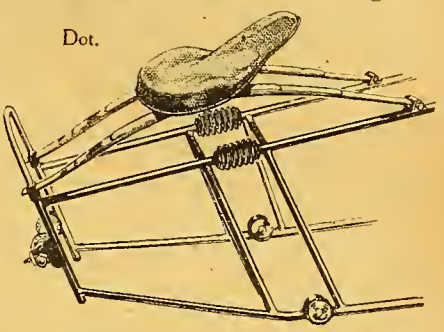
Unibus.



### The Rider and Engine Sprung.

The second method of springing is at present represented by only one machine, but that an interesting one, viz., the McKechnie. This was designed in India by Col. McKechnie, who found the Indian roads very trying when he was riding a motor cycle with a rigid frame, and a model embodying all the special points was made in Meccano.

Dot.



A duplex frame consisting of two tubes on each side extends from the rear hub to the head, where the front wheel is carried on a Brampton fork. Within the main frame is a sub-frame carrying the engine and other mechanical parts as well as the saddle and footboards. On such a frame there is more unsprung weight than is found on the usual spring frame, but it has the advantage of the lateral rigidity of a rigid frame. The sub-frame is supported on a long laminated semi-elliptic spring (3ft. 2in. × 2in., to be exact) pivoted behind the head and to a rocking bridge piece over the rear axle.

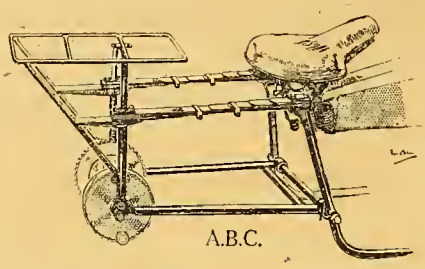
The lower part of the movable frame is carried on Skefko ball bearings, where radius rods maintain the chain adjustment with very little variation during the rise and fall of the wheel. This variation is found to some extent on all machines where the engine is sprung, but with good design it can be made very small, and on the McKechnie motor cycle it is made of still less consequence by the use of a Brampton shock-absorbing chain. The use of this chain is a proof of the care bestowed upon details by the designer, for such a chain or an efficient shock-absorber in the rear hub should be standard practice on all chain-driven spring frame motor cycles.

### Only the Rider on Springs.

On the Edmund the saddle, footboards, and top tube carrying the tank are supported on long quarter-elliptic springs and supplementary coil springs. Arrangements are made to allow of some adjustment for weight. The advantage of this method is that there can be no variation

**Spring Frames.—**
in the distance between the driving and driven sprockets, and so the tension of the chain is not affected by the roughness of the road. To set against this advantage is the need for pliable petrol and oil pipes between the tank and the engine unit, since the tank is partly sprung while the engine is not. The Bat employs a similar system but embodies coil springs.

The Kenilworth miniature is sprung somewhat in the same way, since the saddle pillar and footboards are supported on the same set of coil springs, but there is no spring fork.



A.B.C.

In spring frames of the second and third types the relative positions of handle-bar, saddle, and footrests are not maintained constant, but probably this makes but little difference in practice.

Notes on spring frames would not be complete without some reference to that very attractive machine which began life as the T.A.C. and had a spring frame, four-cylinder engine, and shaft drive. The rear springing consisted of four quarter-elliptic springs, placed in pairs, which carried the rear wheel without any radius rods. The spring forks were at first upon the same principle, but parallel link forks soon took their place. A hand- or foot-operated clutch was, I believe, first seen on the T.A.C., so also was wheel steering, but the latter was not suited to a solo machine, and was soon changed.

Another spring frame machine which never became really popular was the A.S.L. This differed from others not so much in the manner of its suspension as in the type of "springs" employed—a pneumatic system devised by Prof. Sharp. This machine was provided with a padded seat instead of a sprung saddle. Air springs have the advantage of being easily and quickly adjustable to the weight of the rider and the condition of the road by means of an inflator.

# THE TOUR DE FRANCE.

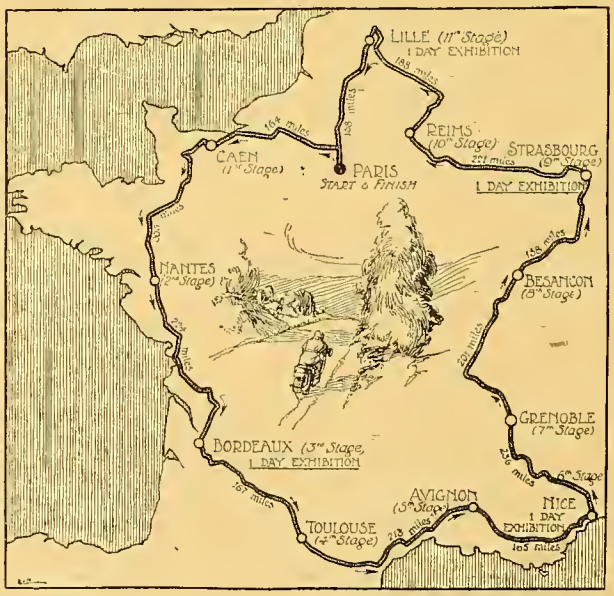
## A Journey of 2,334 Miles, embracing all Types of Scenery and all Classes of Roads.

AFTER an interval of 17 years the Tour de France is being revived on Saturday next. This is the longest reliability trial which has been held for many a long day, and will entail a journey of some 2,334 miles. Altogether there are 46 motor cycle and 32 cycle car entries. Great Britain will be represented by such well-known makes as Levis, Velocette, Sunbeam, Rover, B.S.A., and Triumph. So far as British riders are concerned, Col. McKechnie will be riding his own spring frame machine; Pinney, the French Triumph expert, is an Englishman resident in Paris, while there is a Sunbeam sidecar outfit ridden by an Englishman named White.

Naturally, America will be represented by its two principal makes, the Indian and Harley-Davidson. Among the French makes may be mentioned the Soyer, D.F.R., Gillet, Yvels, Viratelle, Rasser, Blériot, Gnome-Rhone, and Janoir.

As its name implies, the trial covers the whole of France.

Leaving Paris, the competitors make Caen in Normandy the first night. The next day Nantes is reached after passing through Brittany, while on the third day, after a run of 224 miles down the western part of France, the competitors reach Bordeaux, where an exhibition will be held. Toulouse is reached the next night, and on the following day the most southern point of the journey is reached, and after a run of 213 miles the competitors pass the night at the historical city of Avignon. The next day is comparatively easy and takes the riders over the Esterelles into Nice, where another exhibition will be held. Next follows one of the most interesting sections of the journey, from Nice to Grenoble, after which a journey of over 200 miles bring the competitors to Besançon on the edge of the Juras. The next day's run passes through re-occupied area, and the riders pass the night at Strasbourg, where for the third time a one-day exhibition of competing machines is to be held. The trial now passes through the war area, traversing Reims, where the tenth night is spent; finally Lille, where the last exhibition is held. After Lille the trial proceeds direct to Paris.



The circular route of the Tour de France, embracing in the 2,334 miles journey long straight stretches in the plains of Normandy and mountain climbing in Haute-Savoie.

The organisation is in the hands of the Moto-Cycle Club de France.

The Editor does not hold himself responsible for the opinions of his correspondents.

**Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address.**

### *TOURIST TROPHIES—EMPHASISING "TOURIST."*

Sir,—I have read with great interest the account of the origin of the Tourist Trophy races in the current number of *The Motor Cycle*. Particularly was I interested in the statement that "great care was taken to prevent any form of freak being brought into the race."

Heaton Norris. PRIVATE RIDER.

### *NAVIGATION DIFFICULTIES ON A 1910 SINGLE.*

Sir,—Will some expert please advise me on how best to manage a 1910 single gear Triumph on greasy roads? My machine persists in what I think is termed rolling, and I find it most difficult to keep a straight course. I have fixed the footrests as low as possible, and use semi-T.T. bars, and should like to know the usual procedure for driving on vile, greasy roads—whether the bars should be held firmly or otherwise, etc.? TROUBLED.

Tetbury.

### *STEAM.*

Sir,—May I be permitted to ask why it is that the steam engine as applied to motor cycles seems to be entirely ignored? I really fail to understand the absolute monopoly the really inefficient i.e. engine holds when one considers its disadvantages.

To my mind, speaking theoretically, the twin-cylindered steam engine has overwhelming superiority, *e.g.*:—

A *constant* push the *complete* length of *every* stroke!

*Self-starting* and good *silence*. W.G.E.E.

Swansea.

[Steam engines are only self-starting after a sufficient head of steam has been generated.—ED.]

### *TWO-STROKE EFFICIENCY.*

Sir,—I read with interest the remarks of Mrs. Mary C. Jennison about the cooling of two-strokes, but if this lady had been with me the other day I feel sure she would change her ideas; it opened my eyes.

I had the pleasure of seeing a 500 c.c. Dunelt outfit run up and over Hindhead. This the machine climbed all the way *on top gear*, never under 28 m.p.h. B.E.8694.

Godalming.

Sir,—Replying to the letter from Mrs. Mary C. Jennison, the temperature of the gas in a cylinder at the instant the charge is completely burnt is governed by two factors, the compression ratio and the volumetric efficiency of the engine. From this it is obvious that the maximum temperature of the gas in the cylinder is independent of the size of the cylinder. Again, as the size of a cylinder increases, the ratio of the cooling surface of the cylinder to the surface in contact with the hot gases remains constant, and thus, other things being equal, the temperature of the cylinder walls will remain constant. Consequently, if only the cylinder of an engine is considered it is obvious that there is no limit which can be imposed on the capacity of a cylinder. It is a distinct advantage, as far as thermal efficiency is concerned, to use one large cylinder for a given c.c. in preference to several small cylinders. R.T.F.

Blackpool.

Sir,—The following are some of my exploits on a 2½ h.p. Sports Velocette (two-speed): (1) Measured half-mile in 33sec. (54.5 m.p.h.) (this includes slowing down to about 35 m.p.h. for an obstruction). (2) Climbed Lytton Slack on bottom gear of 10 to 1 (the middle portion—about one-half the total length—was done in top gear of 5.7 to 1). (3) Sheffield to Axe Edge, a distance of 28 miles, with sidecar and passenger, in 1h. 10m.

All these are after about 2,500 miles running with no replacements excepting new piston rings.

Sheffield. WELLERSSET.

### *THE A.C.U. AND PRIVATE TRIALS.*

Sir,—Having read with interest the controversy between Mr. Booth and Mr. Loughborough regarding private motor cycle trials, and also having perused Mr. Loughborough's reply to his critics, I can only conclude, with due regard to Mr. Loughborough's position in the motor cycling world, that he has yet to give a clearer explanation for his attitude in interfering with a private individual's affairs. The one peg on which Mr. Loughborough hangs his reasoning, *i.e.*, "authenticity," is hardly constructed to enable the A.C.U. to question the rights of any individual or any non-affiliated club to hold any trials which they should choose within themselves. My respect for the A.C.U. as a governing body is profound enough, but let it act in its self-appointed official capacity within its limits, and it will find its prestige will be duly regarded not only in America and elsewhere but within our own portals as well.

T. ROBERTSON,
Pitlochry and District M.C.C.

Sir,—I am of the opinion that every intelligent motor cyclist will support the attitude Mr. Loughborough has taken up in regard to the "open petrol consumption test" which Mr. Booth suggested that he might organise. However much a certain type of rider may object to being dictated to in the matter of sport, it must surely be clear to every motor cyclist that the governing body, as represented by the Auto-Cycle Union, is the great safeguard which stands between private owners of machines and those who might be inclined to exploit their confidence for commercial ends. While one does not surmise, of course, that the competition suggested by Mr. Booth would have been conducted on any but proper lines, the fact remains that such a test, if carried out, would be absolutely unofficial in character, and any claims of performances made on behalf of the competing machines could not possibly have the authenticity of those recorded in the recognised A.C.U. contests.

It would surely be a bad day for motor cyclists in general were it generally accepted that private individuals could promote competitions of an unofficial character whose results might gain equal publicity with those of the official contests.

The art of the advertisement writer could undoubtedly make such results equally convincing to the uninitiated reader as those claimed for machines in the classic competitions, and we should soon arrive at a condition of affairs in which the ordinary private owner, without opportunity or inclination to investigate the claims of all and sundry, would simply be unable to come to a reliable

opinion about the performances and capabilities of any given machine.

By all means let Mr. Booth promote his petrol consumption competition if it amuses him, or interests his prospective competitors; but I hope we shall always have a governing body strong enough to maintain the attitude Mr. Loughborough has now adopted in the interests of private riders. A. E. CURTIS.

Sir,—The writer believes that he expresses the wish of many motor cyclists in saying that he hopes Mr. Booth's trial will be held and the results published. If he and his friends are free-lance cyclists then it cannot be said of them that they will have infringed the A.C.U. Rule 3a. They have not subscribed to any rule of the A.C.U.

The question must be asked—Is Mr. Booth's competition one that will be popular? Then, if so, is it filling a gap left in the programme of the A.C.U? Are the A.C.U. events filling the whole bill, or is there a desire for an event or events run on lines not covered by the official policy? ORTHODOX.

Glasgow.

*MOTOR CYCLES FOR BOYS AND GIRLS.*

Sir,—I have read with much interest the article by Col. Brereton, and am in hearty agreement with him, especially with regard to the development of the mind and the encouragement of those desirable qualities (and many others, too) which he mentions.

Now, the selection of a machine obviously calls for great care and consideration on the part of those responsible. As Col. Brereton says, there are many suitable machines on the market, which, without becoming a source of danger in the hands of an inexperienced rider, will develop his or her necessary qualities, and in doing so will produce a rider capable of using any type of machine which he or she may desire to possess.

Therefore, I say that, should the youngster of either sex show a desire for the possession of a motor cycle, this desire should be encouraged, provided that the machine selected is easily controlled, docile in running and not liable to dash away at the slightest touch of the throttle, light, and reasonably clean. FLYWHEEL.

Middlesbrough.

Sir,—May I trespass in your much-appreciated columns to thank Col. Brereton for his defence of the juvenile motor cyclist?

However, with all due respect, I must beg to protest against one or two extremely unjust remarks he made. He is surely rather hard and, in fact, he is exaggerating when he states that any boy not attracted by machinery is "sick, or dull, or unusually constructed." Were this statement true, full fifty per cent. of the boys in this country would come under this heading.

Again, when a boy has reached the age of fourteen or more, he has surely passed the stage of infancy, and will not throw his machine into a ditch, or break it to pieces with a hammer should it go wrong (as Col. Brereton suggests), even if he has an exceptionally bad temper. If, like half the number of young motor cyclists, he is not mechanically-minded, what is simpler than to take the refractory machine to the nearest garage and have it repaired? SMALL BOY.

Wellington.

Sir,—All who know boys intimately—I do not mean those who merely look down at them from their pedestal of middle-aged superiority—are well aware that an intelligent boy often, in moments of danger, gives proof of great self-possession and courage, a keen, intuitive grasp of details and possibilities, and a lightning rapidity in decision and action, which is not often equalled by the middle-aged, whether short-sighted, deaf, crippled, or suffering from nerves or other failings of advanced age.

It is, in my opinion, unfair and unsportsmanlike to make such sweeping and arrogant distinctions between boys and adults. It is impossible to generalise like that. Countless people never grow up. Many a boy of 16 is smarter and quicker, and more capable of dealing with sudden danger than many a middle-aged man, and a motor cycle is infinitely safer in the hands of an intelligent boy than in the hands of a stupid, and possibly nervy middle-aged man who, as likely as not, would flounder hopelessly when suddenly faced with a dangerous position.

We train our boys in all kinds of sport likely to develop the characteristics we admire. Why not motor cycling?

Lincoln. A PARENT.

Sir,—I would remind "XH-3296" that because boys may go fast it does not mean that they are reckless; they might be just as safe as the person that "potters" along: in fact, in some cases safer. G. V. HENDY.

Sir,—I am 15, but I cannot agree with "XH-3296" and "Middle-age," who state that the age is too young. A modern boy of 14-16 has more sense than to dash up and down at speeds dangerous to the public. A two-stroke or a light-weight four-stroke cannot reach 50 m.p.h., and what boy does one see in charge of a Sports Sunbeam or Norton? Again, concerning speed, what motor-cyclist is there who, when leaving a town and getting on to an almost deserted road, keeps inside the paltry 20 m.p.h. limit?

Wakefield. GUS.

Sir,—I am only sixteen, but am madly interested in motor cycles. Owning a machine at an early age prepares any boy to become a real upholder of the glorious sport. I have read many of Lieut.-Col. Brereton's fine books for boys, and from their tone I think he ought to know.

London, N.17. YOUNG 'UN.

Sir,—The average boy from 14-17 is not reckless: he uses his motor cycle for pleasure. The road hogs are more often riders who are getting near the "twenties." YOUTH.

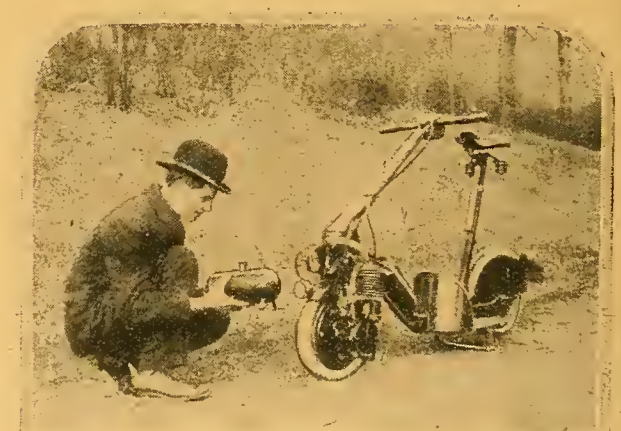
Felsted.

Sir,—I am fifteen, and own an Enfield two-stroke, and can say quite honestly that I am more dangerous on a push-bike (all necessary apologies!) than on a motor cycle. On the former I corner recklessly, steadying myself with my feet, tear through traffic, and never use a bell. On the latter I never "open out" unless the road is straight and empty, corner with perhaps exaggerated caution, and make plentiful use of my horn. PETROIL.

Elstree.

Sir,—I suppose it is permissible for juveniles to be "heard and not seen," sometimes.

Surely "XH-3296" cannot think that if a boy of fifteen owns a motor cycle he races about at all times with his throttle full open? If so, I can assure him he is mistaken. W. F. MEAD.



THE LATEST AMERICAN SCOOTER. The frame is a five-leaf spring, shaped somewhat like an open frame bicycle, affording good insulation for the rider from engine vibration as well as from road shocks. The machine is fitted with a two-stroke engine and fly-wheel magneto. A quickly detachable petrol tank is used so that it may be left out of doors when the scooter is taken inside an ordinary dwelling house.

Sir,—Apparently many middle-aged folk disagree with Lieut.-Col. Brereton's views on the subject, as they think that the boy of 14-16 is entirely irresponsible and ought not to be trusted with a motor cycle. I know a few boy riders who, although they like speed, are not so inconsiderate as many "middle-agers" in their pursuit of the goddess. Another point in the boy's favour is that, although sometimes reckless, he seldom loses his head or "gets the wind up." STARTED AT 14.
Edinburgh.

Sir,—I would like to point out that it was not boys of 14-16 that won our supremacy in the air, but young men of twenty upwards. If, in "XH-3296's" opinion, we boys should not have motor cycles, should people who are short-sighted, deaf, or crippled?

I also think that the fact that there are few boy and girl motor cyclists on the road is caused through lack of finance on the parents' part, decidedly not the reason suggested. ONLY FIFTEEN.
London, N.10.

Sir,—I entirely agree with Lieut.-Col. Brereton's article. I can ride a 2¾ h.p. machine myself as well as some people of 30-40, and am only just fifteen. Has any reader heard of a boy in Court for reckless driving? No, he is usually too careful of his first mount. W.T.
Birmingham.

Sir,—I entirely disagree with "XH-3296" and "Middle-Age." I consider that there are dozens of boys on this island capable of handling a motor cycle.

Again, the average boy does not want very much "speed," and if he does "let her rip" on a good, quiet road, what does it matter? 13-YEAR-OLD YOUNGSTER.
Hastings.

Sir,—Your correspondent "XH-3296" evidently thinks that because a boy is young he is a "reckless, irresponsible, dare-devil," and that as soon as he reaches the age of 18 or thereabouts he becomes "steady," and gives up his irresponsible habits. Surely boys of 14, who "want speed, and know no limit," are just as enthusiastic when they are three or four years older. The young pilots, whose dare-devilry invoked "XH-3296's" blessings, were hardly boys of 14 or even 16 years of age. D. M.
Harrow.

Sir,—I can hardly credit that in this enlightened age there can be anyone so narrow-minded and bigoted as "XH-3296" and "Middle-Age." I am a schoolboy of 15, and possess a light-weight motor cycle, from which I derive an infinite amount of pleasure. My only explanation of the attitude adopted by your correspondents is that when they were at the age of 14, they were "reckless, thoughtless, irresponsible dare-devils," and that they are judging others by themselves.

"Middle-Age" says a pedal cycle is good enough; I can quite picture him when a youth refusing a motor cycle until he had earned it. STANLEY F. BENNETT.

## HANDLE-BARS FOR CONTROLLABILITY.

Sir,—With regard to the question as to whether touring or semi-T.T. handle-bars are the best, it seems to me to depend entirely on the relative sizes of man and machine—a small man needing handle-bars which come further back than those of a tall man who has a longer reach. It is a well-known fact that the greater the comfort of a persou the greater his control over any machine. Therefore, let each individual decide which is the most comfortable position he can get into, and adjust handle-bars, footrest, and saddle to suit.

The vast majority of people when sitting without any support for their back, loosen the muscles in the small of their back, thus leaning forward very slightly. The most effective position of the arms is for them to be not quite straight, with the hands a little farther apart than the knees, and fairly low. This position is readily obtainable by means of an upturned handle-bar of the N.U.T. type, rather like a very broad bicycle handle-bar, only with the grips turned out at an angle of about 35° to the line of travel, and somewhat dropped. This type of handle-bar and riding position enable me to sit bolt upright with one hand on the handle-bar, but not with both. However, since one scarcely ever wishes to keep for long in what, to most people, is a distinctly tiring position, this is not a very serious drawback. Many types of touring handle-bars can be quickly bent out into this shape, my own having been produced by this method. XH-212.
Oxford.

## COMPLICATED COASTING.

Sir,—Mr. Geary comments on the saving of petrol and also the wear of the engine relative to coasting down inclines.

I have often considered the point he raises myself, and used to coast down hills with the engine shut off and gear in neutral, until I was told by one person that doing so was to ask for trouble, as the front cylinder was liable to distort owing to the rush of cold air playing on the front part of it; the same person said that it was best to run down hills with the exhaust lifter raised, but another expert tells me that to do that I will also be asking for trouble in the way of burnt valves.

I should like the opinion of some of your correspondents on this matter, as until I get a little more information I shall continue to rnn down hills with the engine ticking over, with the gear in neutral, which up to the present I have considered to be the happy medium. F. WALKER.

## THE WORLD'S WORST ROADS.

Sir,—I see in the issue of January 12th that my letter of December 22nd has put Mr. H. Beacon's back up. I regret this, because he and I are both on the same tack, he being irritated by Englishmen's abuse of their roads at home, I by their continual boasting of the appalling surfaces in the colonies, which, nevertheless, fail to damp their manly ardour. When I found that these were much better than I had been led to suppose, I succumbed to the temptation that every man has once, at least, in his lifetime, that of rushing into print.

To answer Mr. Beacon's question, rain improves sandy roads out of all recognition.

Lastly, I hope his four months on English roads included the Uxbridge and Hounslow tram routes. I should like to think they have altered. OVERSEAS TRIUMPH.
S. Rhodesia.

## TWO "BEACON HILLS."

Sir,—I note with interest the various replies to my recent letter *re* the freak hill at South Harting. Your correspondents seem to have been trying their various mounts on the wrong hill. The Beacon Hill is not exactly what one may call a road, but simply a chalk lane directly up the side of the South Downs. Mr. C. J. Evershed states he has climbed it on his Dunelt sidecar. This I beg to contradict, as it is absolutely impossible to pilot an outfit up the Beacon Hill.

I am willing to meet any of your correspondents at Easter if they will write to me (c/o the Editor) and arrange a particular time. REGINALD S. FOWLER, R.A.F.

## SHAFT-DRIVE UNPOPULARITY.

Sir,—Why are our manufacturers so terrified of shaft-drive? After hectic hours of wrestling by the roadside with slipping and breaking belts and filthy and inaccessible chains, the mere rider may be pardoned for enquiring, in language more pointed than printable, why "car-drive" is denied to him. The F.N. has employed this transmission for many years, with no apparent want of success—even on a single-cylinder lightweight—while in price these machines compare very favourably with more conventional types. One would almost be tempted to ascribe the phenomenon to sheer lack of enterprise did one not find the gifted designer of the A.B.C. (by no means a slave to convention!) carefully "turning the drive round" in order to get the "final chain"; an act (one would think) of sheer perversity, introducing an unnecessary complication for a highly undesirable end.

Will one of our authorities shed the beam of his wisdom upon the darkness of our ignorance, that we may suffer our belts or chains gladly henceforth, comforted by the knowledge that there is no practicable alternative?
CHARLES A. N. MORRIS.

THE MOTOR CYCLE
SPRING NUMBER AND BUYERS' GUIDE

*An enlarged number with seasonable features and special articles of interest to all Motor Cyclists and Potential Riders.*

**An illustrated Buyers' Guide embodying Specifications of all Motor Cycles on the British market will be a feature.**

**Thursday. April 6th.**

### *SPEEDS OF TWO-STROKE LIGHT-WEIGHTS.*

Sir,—I would like to accept Mr. Grubb's challenge to a three-lap race on Brooklands. My machine is a 293 c.c. single-speed Connaught. STEVE.
Hendon.

### *AFTER PROLONGED USE.*

Sir,—Referring to the observations by Major Willcox on the above subject, I should also like to give a few particulars of my experience over a corresponding period with a similar machine, a model H. 4 h.p. Triumph.

The machine in question is a 1919 model (August), and the total distance I have covered to date (solo only) is just over 11,000 miles. I do not use the machine for business purposes, consequently it very often remains in for a week or more at a time, especially in bad weather seasons.

I may say that the only replacements I have fitted up to the present time are :—

1 new set of wheel cones and bearings.
1 „ „ „ head races for frame and crown axle.
2 new barrel springs.
1 clutch control cable.

As regards the engine, the main shaft bearings, large and small end bearings, and transmission generally are in excellent order, no apparent wear being perceptible. I have found that by packing fine cotton waste inside the inlet valve spring and lubricating occasionally with a few drops of engine oil, adequate lubrication of the valve guide is maintained. The waste also prevents the scouring action and consequent wear caused by the suction of dirt particles into the guide.

My consumption for petrol averages 90/95 m.p.g., and for oil approximately 250 miles to the pint. With the standard jet as supplied (32) I have obtained 53 m.p.h. with a 16-tooth engine sprocket, and could no doubt "touch" 60, under very favourable conditions, but I really doubt the possibility of this model reaching some of the extraordinary speeds some of your recent correspondents claim to have attained. SATISFIED RIDER.
Bristol.

### *DEFINING A "SPORTING" MACHINE.*

Sir,—Your recent leader on the best type of sporting machine is interesting; the argument, however, is bound to be interminable unless a hard and fast definition of the word "sporting" can be agreed upon. To many people it has little meaning beyond speed and acceleration, coupled with a deafening exhaust. This is not my idea, though, of course, speed and acceleration cannot be ignored. I feel that the most sporting machine is one whose powers are such that with skilful riding and expert nursing it can just be persuaded to accomplish the most difficult tasks. I do not believe it possible for the rider of a big twin or modern 3½ h.p. ever to experience the thrill of exultation and triumph which comes to the rider of the baby—whether two or four-stroke—as he successfully tops Alt-y-Bady, or rounds the last hairpin on Tornapress. Of course, we all know the contemptuous sneers of the big twin enthusiast—that it takes a *man* to handle one in bad going, while if it is too rough for the baby you can put it in your trouser pocket and walk up, and so on. Be it so, but let the B.T.E. try to ride the baby up, for instance, Park Rash, and he will find that it is as much of a handful to control as he could wish for. And as for that "scrap" along the road, the baby may not be able to do a lot more than forty, but at the end of two or three hours it will not be such a very long way behind, particularly if it is not a straightaway main road. Anyway, I am a whole-hearted supporter of the baby as the true sporting machine. The first machine I ever owned was the biggest, and each succeeding one has been smaller, and has given me more real satisfaction than the others. The capacity of my present machine is 220 c.c., and my riding weight fifteen stone, and if I can find an appreciably smaller engine which can be persuaded to do what I ask it, I shall certainly try it. (Rev.) J. M. PHILPOTT.

### *SIX THOUSAND MILES ON A SPRING-FRAME MOUNT.*

Sir,—I have read with interest the recent correspondence concerning "Where are the Spring Frames?" The paucity of their numbers as compared with those of rigid frames doubtless accounts for the above quoted query; but when spring-frame machines for the most part have seen only a single season, one cannot expect to see their numbers compare favourably with those of rigid frames, the dates of manufacture of which vary from pre-1910 to the present day.

My experience with a spring-frame machine may be of interest. Last February I secured delivery of a 5-6 h.p. Raleigh. I was immediately captured by the comfortable sitting position and the vibrationless running of the engine. The spring frame gave one 100% more comfort than a rigid frame, so that even after a long journey over present-day roads one did not feel unduly fatigued. The one "fly in the ointment" was, "How would the spring-frame bearings wear? Would 'play' develop and make riding at speed dangerous?" Over 6,000 miles have been covered on this machine, and I can truly say that the motor cycle is as comfortable and safe to ride to-day as on the day I purchased it. The spring frame has given me the seating comfort of a car, and has given no trouble whatsoever. Without undue forcing, the machine can tick off (as per Watford) 55 m.p.h. on a level stretch of road any time, equipped, as it is, with the wide leg shields fitted as standard. On wet roads it is as steady as a rigid-frame machine—in fact, steadier than many I have known, as the weight and riding position are low. Only the deeper pot-holes are felt; the jars of the small and medium sized ones are not transmitted to the rider, and, after all, it is the continual jars from these that make motor cycling fatiguing and unpleasant to lovers of ease and comfort.

I have no connection with the Raleigh Co. other than being a thoroughly satisfied owner and user of one of their productions. D.F.C.
Tregaron, Cardiganshire.

### SUMMARY OF CORRESPONDENCE.

Mr. C. R. Haill has had very discouraging experiences with "clearance covers."

The wonderful speeds on the road periodically claimed by readers move Mr. S. G. Onseley to suggest that the police may also be readers of *The Motor Cycle*.

**Books & Maps for Motor Cyclists.**

Issued in conjunction with *The Motor Cycle*.

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "Ixion," of *The Motor Cycle*.
Price net, 5/-. By post, 5/3.

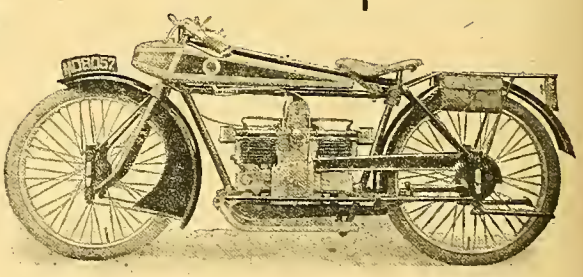
TRADE ACCESSIBLE MARK



## OUR TRADE MARK.

A trade mark should be the first cousin of the goods it represents.

The WOOLER trade mark has a very real connection with WOOLER MOTOR CYCLES.

The little set-spanner reproduced above is certainly closely related to the design of the WOOLER.

Only two sizes of Nuts and Bolts on the whole machine!

This is not a pleasant dream, but an accomplished fact.

With the exception of the nuts on either end of the crankshaft, this little spanner and a screwdriver will enable you to take down completely and re-assemble your WOOLER engine and gear.

Mudguards, tank, brakes, steering, any detail you can think of will bow to the spell of this little spanner.

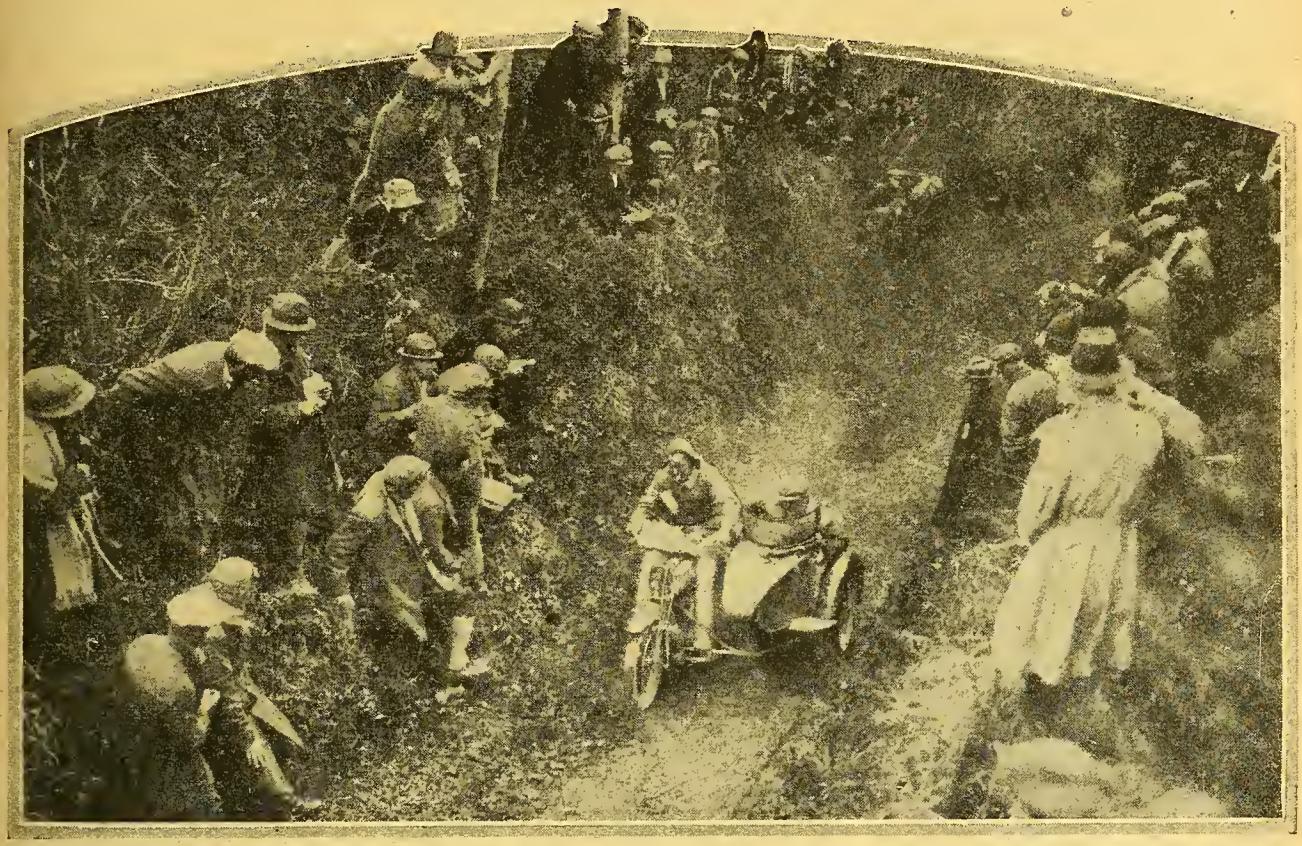
In addition the word ACCESSIBLE means what it says.

*Write for particulars.*

**ALPERTON, LONDON**

# "VICTORY" OVER FREAK HILLS.

## One Hill only—a new discovery—Causes Real Trouble in Saturday's Birmingham M.C.C. Classic Trial.



On Sandy Lane, B. L. Bird (6 B.S.A. sidecar) charged up at speed until he met his Waterloo in the shape of one of the banks within a few yards of the summit.

WITH the exception of one hill, the course of last Saturday's "Victory" Reliability Trial was nearly ideal for such an event; it was quite fair, yet reasonably sporting. The inclusion of Sandy Lane, a sadly misnamed wet, earthy gutter up a hillside near Alfrick village, was undoubtedly a mistake.

At 2.30 p.m. "No. 1" registered a failure here, and it was three and a half hours later before the last of the 210 starters did not get up. The fact that there were one or two clean climbs proved that it was not an impossible task, but unfortunately the successful riders gain no advantage in marks over those who sprawled up with legs trailing in an erratic and inelegant fashion, providing, of course, they did not actually come to a stop.

There were twelve other non-stop hills and two observed "colonial" sections.

### From Birmingham.

Starting at the James Cycle Works, Greet, Birmingham, competitors found little difficulty with Swan's Hill or Gravel Pit Hill, but muddy Fordrough required careful negotiation. On an even worse section following quite a few of the early men had an uneasy suspicion that they had run off the course—so thoroughly vile were the red clay tracks—but they picked up the arrows again in due course. For the rest the route-marking was exemplary.

Very good times were recorded in the acceleration test by B. Kershaw and J. N. Roberts (New Imperials), A. R. Evans, and A. W. Thrush (Sunbeams), E. Spencer (3½ Douglas), L. Newey (8 Ariel sc.), G. E. Austin (5-7 Coventry Victor), M. G. Scalley (4½ Humber), A. Watson (3½ Sunbeam sc.), H. Stretton-Ward (3½ Triumph), R. Brown (3½ Sunbeam sc.), B. L. Bird (6 B.S.A. sc.), and G. Dance and A. Bennett (Sunbeams). W. E. Smith (3½ Norton), broke a front chain.

Lower Walton and Hagley Wood Hills were taken on the run by most. P. L. Mayo (2½ Coventry Eagle), W. E. Smith (3½ Norton), carburetter trouble, and F. C. Gray (8 Excelsior sc.), with a stone wedged in his mudguard, were the only stops on the latter grade. Not until Noah's Ark Hill, beyond Stourport, came into view was there much incident for observers or Press men. The alarmist rumours regarding the last mentioned climb were, however, mainly unfounded, and the majority of the failures were due to belt slip developed in a miniature river-bed approach.

### Belt Slip Troubles.

E. H. Broughall (3½ Coventry-Challenge) and E. Gates (2½ Sun) both stopped for this reason; E. Poppe, on a very fast White and Poppe two-stroke, was also unfortunate, but re-started well after he had shed his silencer. Very fast climbs were made by R. W. Duke (3½ Triumph), Bert Kershaw (2¾ New Imperial), W. B. Gibb (3½ Douglas)—until he all but missed his gear-change—and Eric Barnett (2¾ Francis-Barnett). A. King Smith (2¼ Morris) combined considerable speed with as much noise.

The descent of High Oak Hill was, in the words of the route card, a natural brake-test, and a rocky water-splash at the foot, plus the immediate ascent of Liveridge Hill, called for careful driving. Belt-slip was again prevalent, A. D. Mayo (2½ Coventry Eagle), W. T. Woodcock (3½ Ariel), W. Bell (2¼ New Hudson), P. Sadler (2¾ Connaught), E. H. Broughall (3½ Coventry Challenge), J. E. Bramley (3½ Coventry Challenge), H. Bennett (3½ Ariel), R. A. Weeks (2¾ Sirrah), L. G. Green (2¾ Verus), and

Thick layers of extremely glutinous red clay formed the surface for several hundred yards after Hagley Wood Hill. S. H. Jones (2¼ Levis) manfully keeps his equilibrium while R. E. Pugh on a sister mount "foots."

G. L. Reading (3½ Ariel) being the chief sufferers. Clifford Wilson (4½ Quadrant sc.) charged through the splash and up the hill in striking contrast to M. G. Scally (4½ Humber), who came through at less than a walking pace. Three of the most striking climbs were made by R. G. G. Beesley (3½ Sunbeam sc.), B. L. Bird (6 B.S.A. sc.), and H. J. Stretton Ward (3½ Triumph). Having "lost" his low gear, G. E. Austin (5-7 Coventry-Victor) returned to the foot and announced his intention of retiring. Great caution failed to prevent J. Westwood Will's new Powell outfit from almost overturning in the water.

### An Old Favourite Revisited.

Buckeridge, the next official climb, was child's play, and it remained for Abberley Hill to tarnish further clean sheets before the lunch stop, which it did most effectively, but withal fairly.

Rushing tactics were impossible on account of a fairly acute right-hand turn at the foot, and the following failures were recorded :—F. W. Viles (2¾ Raleigh), punctured; E. Gates (2½ Sun), dry-skidded; F. Wood (3½ Connaught sc.), turned turtle; A. Rollason (3½ Ariel); Bert Bladder (8 New Imperial sc.); W. H. Fortington (3½ Sunbeam sc.), ran to a standstill causing clever driving in the rough by S. Judge (2¼ Velocette); F. A. Robbins (2½ Triple-H.) and H. W. Parkes (2¾ Sun-Vitesse); Mrs. Jauson (2¼ Ner-a-Car), clutch slip, almost baulking F. T. Sibley's and W. L. Danskin's 7-9 h.p. Rudge outfits; A. L. Mould (3 A.B.C.), skidded and fell, being almost run over by H. V. Collins's very fast Norton outfit; S. E. Longman (7-9 Harley-D. sc.), burnt out his clutch, baulking G. W. Shepherd (2¾ Edmund sc.); S. G. Neal (2½ Neal-Dalm); R. G. Spainforth (2¼ Ner-a-Car), skidded into ditch; L. Heller (4 Douglas), charged into bank for no apparent reason; and S. R. Philpott (6 Martinsyde sc.).

T. Blumfield (8 Ariel sc.) just clambered up, being hampered by a broken throttle wire; and A. Fisher (4 James sc.) and H. K. Prosser (3½ Ariel sc.) both bounced violently, perchance needlessly, in their saddles. Wonderful climbs were made by George Dance and Alec Bennett on long-stroke Sunbeams, and by J. A. Watson-Bourne on a brand new Brough Superior. Fractionally less excellent were J. W. Moxon (3½ Monopole), F. J. Price (2¾ Diamond), Gus Kuhn (4 Douglas), F. Giles (7 A.J.S. sc.), H. R. Davies (2¾ A.J.S.), who was almost baulked, C. Greenwood (4¼ Sunbeam sc.), T. C. de la Hay (4¼ Sunbeam sc.), G. Sharrat (T.G.S.), G. S. Smith (2½ Morris sc.), who seemingly sat in mid-air, Sam Wright (4½ Humber sc.), "revving" at a terrific rate, and J. H. Mathers (7-9 Rudge).

### At the "Hundred House."

Lunch at the "Hundred House" was followed by mixed and often tortuous going *via* Clifton Hill, unworthy of observation, and a much bungled stop and restart test on Telegraph Hill to the now famous Sandy Lane. We noted the performance of every competitor at this point, and at the outset would emphasise that the glorious failures who kept their feet firmly on the rests until they fell off deserve more commendation than many who lost no marks by the expedient of keeping moving somehow.

### Four Outstanding Climbs.

By magnificent riding four, only four, solo men made absolutely clean ascents; they were J. S. Bacon (3½ Sunbeam), W.

B. Bourke (4½ New Hudson sc.), followed by F. Wood (3½ Connaught sc.), in the river-bed approach to much over-rated Noah's Ark Hill.

**"Victory" over Freak Hills.—**

Braudish (4½ Humber), H. J. Stretton-Ward (3½ Triumph), and G. Dance (3½ Sunbeam).

Seventeen passenger machines succeeded in reaching the top without stopping and without external assistance; they were: P. Pehrson (4 Dunelt sc.), his passenger lying so far back that the sidecar body tipped up backwards; A. Watson (3½ Sunbeam sc.); Reg. Brown (3½ Sunbeam sc.), who came up most of the way in middle gear; B. Bourke (4½ New Hudson sc.), slow but sure; Bert Bladder (8 New Imperial sc.), amid a stream of sparks from a steel-studded rear tyre); H. G. Uzzel (8 New Imperial sc.), "only just" from the spectators' viewpoint; G. W. Shepherd (2¾ Edmund sc.); H. V. Collins (4 Norton sc.), very fast; T. C. de la Hay (4¼ Sunbeam sc.), very spectacular; F. W. Giles (7 A.J.S. sc.), ditto; J. J. Lloyd (7-9 Harley-D. sc.), strenuously bouncing; H. B. Denley (10 Rhode four-wheeler), slow (with Parsons chains); F. S. Spouse (8 T.B.); P. Yates (10 New Hudson three-wheeler); W. Ridley (10 New Hudson three-wheeler); J. Allday (10 Rhode); and A. Fraser Nash (8 G.N.), who hurtled up nearly 10 m.p.h. faster than anything else on two, three, or four wheels.

Competitors were sent up Sandy Lane singly, but for some unknown reason W. B. Gibb (3½ Douglas) was despatched before A. B. Jannet (3½ Norton) was clear. Gibb has just cleverly avoided a baulk, but he, too, stopped a few yards higher up.

**Creditable Failures.**

Particularly creditable failures were registered by W. B. Gibb (3½ Douglas), who cleverly avoided a baulk only to stop higher up, F. A. Longman (3½ Ariel), A. Bennett (3½ Sunbeam), who only just failed to emulate Dance's dash up, H. R. Davies (2¾ A.J.S.), A. S. Smith (2½ Calthorpe), J. A. Watson-Bourne (8 Brough Superior), and J. F. Parker (J.F.P.).

Humorous relief was not lacking. When L. Newey's Ariel outfit overturned, some personal luggage was spilt, including what looked from higher up very like a pack of cards. When C. Wilson's Quadrant sidecar was being pushed up the exhaust pipe muffler fell off; forgetting that it would be hot, an obliging spectator picked it up; he had to repeat the operation six times before he finally succeeded in dumping it into the sidecar.

One particular section of the bank became very popular with the B.S.A. sidecars, several charging for the same spot.

Again, Paynter (3½ Norton sc.) forgot to stop bouncing until quite some time after his engine had stopped. T. H. Bonham's passenger (2¾ Calthorpe sc.) made a great effort to assist the little outfit up by turning the sidecar wheel by hand.

Typical of three-quarters of the route, this photograph shows C. Wilson (4½ Quadrant sidecar) approaching one of the lesser test hills, the Gutter.

**Thus Are the Mighty Fallen!**

Some of the failures were surprising, but none more so than H. F. S. Morgan's; he did not use non-skid chains, however.

Amongst the best of the leg-waving solo climbs were: D. A. Atkin (2½ Coventry Eagle), S. G. Orford (2¾ Henley-Blackburne), W. T. Woodcock (3½ Ariel), A. Rollason (3½ Ariel), B. Riley (2¾ A.J.S.), a youngster of 15 or 16, A. W. Thrush (3½ Sunbeam), E. Mundey (2¼ New Hudson), E. A. Barnett (2¾ Francis-Barnett), W. R. Bown (2¾ Bown), E. Gates (2½ Sun), L. G. Green (2¾ Verus), J. A. Newman (3½ Douglas), after a stop with petrol tap turned off, J. Whalley (2¾ Massey-Arran), P. H. Johnson (7-9 Rudge), G. L. Reading (3½ Ariel), G. F. Hollyoak (2¾ Federal), G. J. Baragwanath (2¾ A.J.S.), K. G. Bedford (2¾ Calthorpe), J. Gardiner (2¼ Levis), R. R. Grindlay (2¾ Francis-Barnett), H. R. Harveyson (4 Harley-Davidson), G. A.

**"Victory" over Freak Hills.—**

Strange (8 Brough Superior), and G. H. Kirby on a four-valve Triumph, the last mentioned two being particularly fine and all but clean.

Steep, narrow, but dry, Mill Lane Hill caused only one failure amongst the first sixty or so, E. Smith (2¾ Connaught), who momentarily grounded on a projecting boulder.

**Home in the Darkness.**

Near to the finish the competitors were sent on a detour to Beacon Hill, where a huge crowd watched a series of monotonously successful ascents. It was long after lighting-up time before the last man passed, but the police in the neighbourhood were thoroughly sporting and directed the lampless unfortunates with great impartiality.

The organisation was good, but the main idea of the organisers seemed to be to make the competitors so dizzy that when they came to a stretch of good, straight road they would automatically fall off!

Out of 208 starters, 168 signed in at the finishing point, which in itself indicates the nature of the day. There will not be many gold medalists.

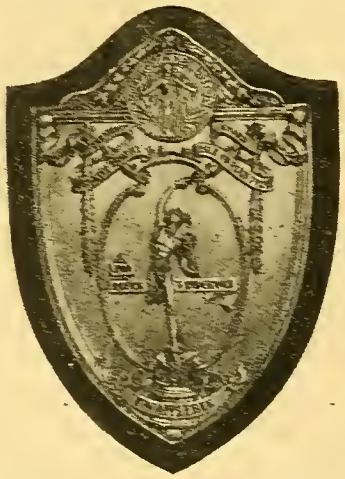
## OPENING RUN OF THE M.C.C. TO BRIGHTON.

FROM the road point of view there is not the excitement about the M.C.C. opening run there was in the early days of the club now the rendezvous at Purley has been abandoned, and all members go down independently. However, there was a very happy gathering at the Royal Albion Hotel, Brighton, on Saturday last. An excellent dinner was served under the chairmanship of Mr. J. K. Starley, the president, who made a witty speech, while speeches were also made by the chairman of the club, Mr. Robert Head, and Mr. W. H. Wells, the club's captain. In the course of the dinner the medals won in the London-Exeter run were presented by Mrs. Starley.

## TAXATION REFERENDUM.

THE A.A. contends that the experience of 1921 has forcibly demonstrated the unreasonableness and grave anomalies of the system which became operative last year, and is urging the Government to remedy this at the earliest date by introducing a method of taxation graduating the individual tax in proportion to the extent to which the vehicle uses the road. A *questionnaire* is being circulated to all members and to as many other motor cyclists as possible, with the object of obtaining the results of practical experience on the road during 1921, *e.g.*, total annual mileage, average fuel consumption, amount of tax paid, extent to which car or motor cycle was laid up, and any difficulties in obtaining registration book or licence.

PATIENCE REWARDED.



The Nisbet Award. Just received by F. W. Applebee for his plucky ride against time and adversity in the 1920 T.T. race.

## IMPORTS AND EXPORTS.

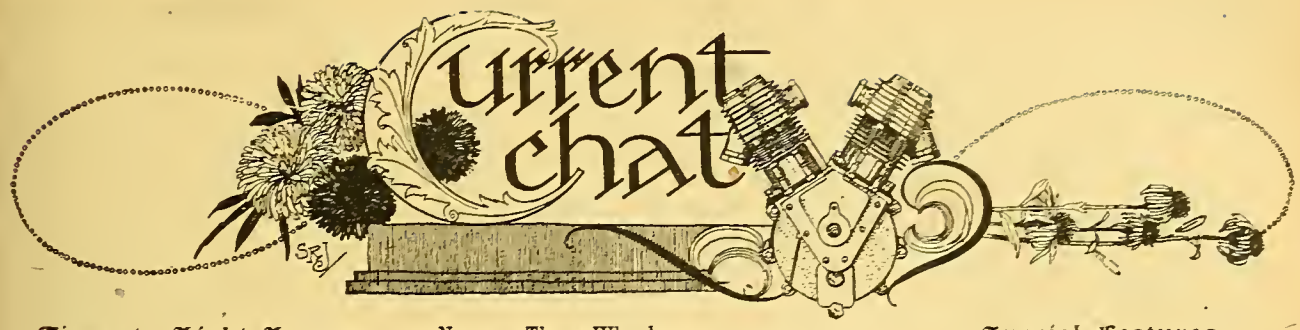
COMPARED with January's importation of motor cycles, last month's figures show a fairly big reduction, being only £7,297, as against £11,958. Exports, however, remain nearly at the same comparatively low level, a slight reduction in value (£2,334) being registered, although there were forty-six more machines exported.

Figures from the Board of Trade Return are given below :—

| | Jan., 1922. | Feb., 1922. |
|---|---|---|
| *Imports.* | | |
| Number of motor cycles | 128 | 75 |
| Value of machines and parts | £11,958 | £7,297 |
| *Exports.* | | |
| Number of motor cycles ... | 501 | 547 |
| Value of motor cycles ... ... | £35,245 | £38,903 |
| Value of parts ... ... | £21,940 | £15,946 |
| | £57,153 | £54,849 |

NO SPEED LIMIT. COMPETITORS AT BROOKLANDS IN THE A.C.U. STOCK MACHINE TRIAL.

It is a severe test for a new machine to indulge in a prolonged speed burst, but the majority of the entries stood up very well.



## Times to Light Lamps.

| | | | |
|---|---|---|---|
| Mar. 23rd | .. | .. | 7.16 p.m. |
| „ 25th | .. | .. | 7.19 „ |
| „ 27th | .. | .. | 8.22 „ |
| „ 29th | .. | .. | 8.25 „ |

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### Put Your Clocks On.

Summer Time comes into force at 2 a.m. on Sunday next.

### Scottish Trials Leader.

This year, No. 1 in the Scottish Six Days will be Rex G. Mundy, who will be at the wheel of a B.A.C. light car.

### An Early Bird.

To ensure that he should obtain an early number A. G. Cocks, the Beardmore-Precision rider, entered the Scottish Trials on January 1st.

### Beware Road Repairs.

A Northern reader sends a warning regarding repairs which are being effected to the main road between Durham and Barnard Castle, about 2½ miles from the latter place. Only half the road is available, and there is a considerable drop from the edges.

### The Popularity of the Motor Cycle.

There is no question about the popularity of the motor cycle in England, but in America it would be useless to claim that motor cycles find universal favour. An American journal just received is using great efforts to show the wide use of the motor cycle in England by every class of rider, from the highest in the land to the lowest.

### Hill Climbing at Pretoria.

British machines scored in a hill-climb organised by the Pretoria M.C., C. B. Bower (Norton) being first, P. C. Flook (Norton) second, and A. V. Baker (Armis) third. In the sidecar class on formula, two American machines, a Harley-Davidson and Indian respectively, occupied the first and second places, while an Enfield ran third.

### Carelessness.

Many manufacturers entering the A.C.U. Stock Machine Trial evidently did not read the regulations, or twenty odd machines would not have been penalised for not complying with them. Most of the motor cycles which were penalised through not having front stands were sporting models, the present-day T.T. type. Incidentally, the A.C.U. regulations for the last T.T. did not demand front stands.

### Now on Three Wheels.

Mr. O. D'Lissa, the veteran Motosacoche exponent, is to be seen these days driving a New Hudson three-wheeler, which incidentally is fitted with a M.A.G. engine.

### Lightweight Sidecars.

A topic of conversation on the track last week was Eric Williams' astounding speed on Brooklands with a 2¾ h.p. A.J.S. sidecar at the conclusion of the Stock Machine Trial. He doubled the legal limit for 12 laps.

### Why?

Since most of the penalised machines in the Stock Machine Trial were chosen from stocks by the A.C.U., and also were examined prior to the start, why were they allowed to start when the officials must have known that there was no chance for a premier award?

## Special Features.

TUNING A 4 h.p. TRIUMPH.
SPRING FRAMES.
OFFICIAL TEST OF STOCK MACHINES.

### Longer Days.

Next week we shall have one more hour of daylight.

### English Princes through American Glasses.

In an American motor-cycling contemporary there is an (unintentionally) amusing article on the use of motor cycles in the British Universities. Undergraduates are called "students," and the following sentence is typical: "Americans . . . may fancy that Prince Albert and Prince Henry were driven to school in the Royal Rolls-Royce until they acquired their own Sports Models to use at Eton or Hanover (*sic*) and Oxford or Cambridge. But they don't."

THE SIDE-WHEEL. An outfit in use in Germany wherein the sidecar body is dispensed with. A framework is fitted over the "sidecar" wheel to which is fixed an ordinary bicycle saddle and fixed handle bars. On this device the passenger is even more exposed than the driver. A similar attachment was marketed in England during 1912-13.

### 1922 Records.

Last week saw the first successful attempt on records this year.

### Mounting Entry List for the Scottish Six Days.

Seventy entries have now been received for the Scottish Six Days' Trials, which take place on May 1st-6th.

### Entries for Land's End.

One hundred and seventy entries have already been received for this year's Land's End run.

### Amendments in Stock Trial Results.

Certificates of performance have now been awarded to A. Milwood and J. Wooler, who both rode 2¾ h.p. Woolers.

### Staxton Hill Climb.

First held in 1909, an Easter Monday hill climb will be run this year for the ninth time at Staxton by the Scarborough and Dist. M.C.C.

### Expenses of End-to-End Run.

It is estimated that £25 will cover the expenses of a competitor in the M.C.C. commemorative Land's - End—John - o'-Groat's run.

### To Ride T.T. Triumphs.

Four riders have now been chosen to carry the Triumph colours in the T.T., F. G. Edmond, H. R. Harveyson, F. B. Halford, and W. Brandish. G. H. Kirby will act as a reserve.

### Team Trial for Private Owners.

For the third year the Surbiton Motor Club will hold its inter-club team trial for the Maude Challenge Shield for clubs affiliated to the A.C.U. The date is fixed for April 22nd, and is open to teams of six, consisting of three solo and three sidecar competitors. No trade riders are allowed. The start, as in previous years, will be from Ripley, Surrey, at 12 noon. The present holders of the trophy are the Oxford M.C.

Thursday. April 6th.
THE MOTOR CYCLE
SPRING NUMBER AND BUYERS' GUIDE.
*Special articles and illustrations will be included.*

### Stock Machine Trial Trifles.

The course was too easy, but Brooklands was a severe test for new machines.

Airmen's suits are very popular among competition men.

Most of the more experienced trials riders of both passenger and solo machines cruised up Kop on middle gear.

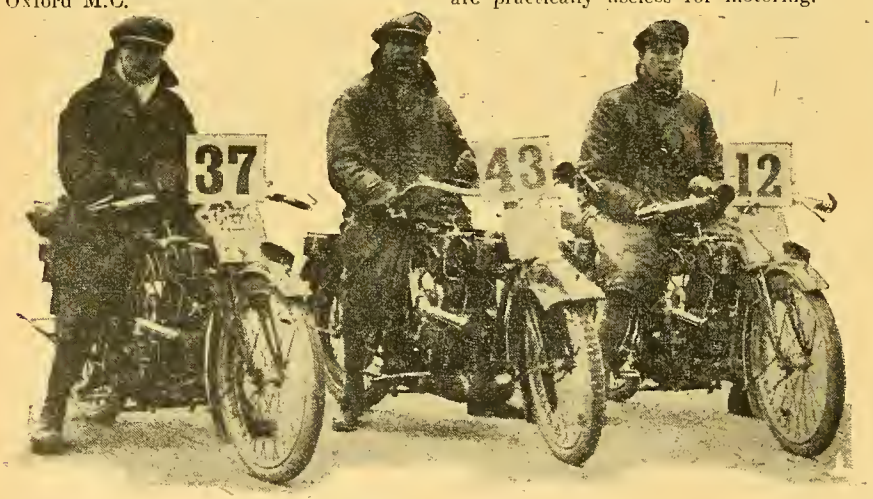
H. R. Davies (A.J.S.) went round the track as if out for a record—and paid the penalty. He was towed in with a bent valve due to a cotter coming adrift.

It was very sporting of the competitors to help one another, but in a 140-mile run there should have been no cause for so much "tinkering."

Several competitors remarked that the trial was the nearest approach to the Scottish Six Days' event the A.C.U. has ever done, inasmuch that there was an absence of irritating tests and checks and "interference."

### In Wales.

A Neath (Glam.) reader sends a cutting from the *Western Mail* whereon it is reported that a Calvinistic Methodist meeting at Porthcawl resolved to petition the County Council to issue only six days' licences to motorists. Incidentally, from central Wales comes a report that the roads between Llandovey and Lampeter and between Cardigan and Aberystwyth are practically useless for motoring.



EQUAL PERFORMANCE BUT NOT EQUAL AWARD. Stock Humbers in the A.C.U. trial. The brothers Brandish rode sports models and were penalised because the standard specification does not include a front stand. R. Grindlay (centre) rode the touring type solo, and secured a special certificate of merit.

Forming a great contrast to the old fashioned sign posting, this guide post, erected by the Ministry of Transport, is situated on the main Birmingham and Stratford-on-Avon Road at Robin Hood. The main arms depict the class and number of the road.

### Police Activity.

It is reported that on two occasions, at least in the early part of the month, a police trap has been worked in the ten mile limit in Radlett on the main London—St. Albans road.

### Saturday's Big Trial.

Although not comparing with the so-called "closed" "Victory" Trial in the matter of entry figures, the open event of the East Midland Centre A.C.U., to be run by the Leicester and District M.C. on Saturday, has received excellent support. There are eighty-one solo, thirty-one sidecar, and ten three- or four-wheeled cycle car competitors.

### The International Six Days.

This year the International Six Days' Trials start on Wednesday, August 2nd, while the Sunday, August 6th, will be a day of rest at Lugano. So far as the actual regulations are concerned, these are very much the same as in the English Six Days, the effect of the F.I.C.M. regulations being to place all Six Days' Trials rules, no matter in what country, on practically the same basis. There will, of course, be hill climbs and a kilometre speed trial at the conclusion of the contest, in which the usual set speeds will have to be maintained by the different classes.

# CLUB NEWS.

### Prestwich and District M.C.C.

About forty new members were enrolled at a very successful recruiting meeting on February 22nd.

### Leeds and District M.C.

Country headquarters have been fixed at the Black Horse Hotel, Otley, and they will be officially opened with a house warming (supper and social evening) on Monday next, at 7.30 p.m.

### Coventry Triangle M.C.

At the annual general meeting, Mr. W. Vice, 58, Argyll Street, Coventry, was elected secretary, Mr. J. Peplow social secretary, and Mr. J. Yardly chairman. The annual subscription is 5s.

### Coatbridge, Airdrie and District M.C.C.

Membership now stands at 60, but, according to the secretary, Mr. W. A. Muir, Carradale House, Coatbridge, there is room for 600; all local motor cyclists are invited to join.

### Worcester and District M.C.C.

Among the many interesting events in the 1922 summer programme are social runs with definite objects in view, such as visiting motor factories, etc., and evening main-road trials for amateur riders exclusively.

### Reigate, Redhill and District M.C.C.

In conjunction with the Woolwich, Plumstead and District Club, an opening run was made from Green Street Green on March 12th. Several freak hills were visited before going to Wrotham, where tea was taken at "The Bull."

### Rugby M.C.

On the 12th inst. the club held a most successful reliability trial over a sporting course of 84 miles. There were only five survivors, the winner being M. G. A. Scally (4½ Humber). Victor Miller (4¼ B.S.A.) was second.

### Southport M.C.

The opening social run was held on the 12th inst. to Clitheroe, and was favoured with ideal weather; upwards of thirty-five members started. After lunch an impromptu hill climb was held on Pendle Hill.

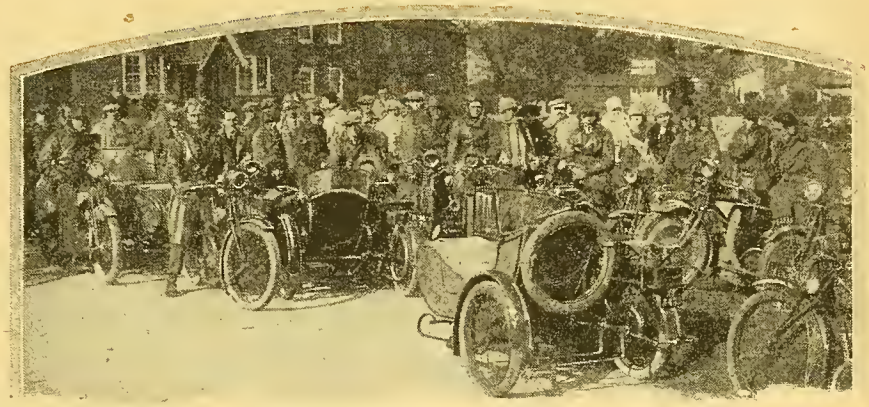
### Blackpool and Fylde M.C.

At a "hot-pot" and smoker at the Queen's Hydro, South Shore (the club's headquarters), the new president, Mr. E. H. Altman, was introduced to the members. Mr. Altman announced his intention of presenting a cup for the reliability trial to be held on the 26th inst.

### Surbiton M.C.

On Saturday, April 1st, a one day reliability trial will be held for the Mellano 100-guinea Challenge Trophy. Entries close on Saturday next.

On the evening of March 16th a successful carnival dance was held at the Vaudeville Club, Thames Ditton. The opening run will take place this week-end, the Talbot Hotel, Ripley, will be the venue.



A group of Woolwich and Plumstead club enthusiasts on the occasion of the recent opening run. It is manifest that interest in social runs will this year be as great as ever.

## Week-End Club Events.

*Mar. 25.—Essex M.C. Hill-climb.*
*Mar. 25.—Bristol M.C. and L.C.C. Mystery Trial.*
*Mar. 25.—Coventry Triangle M.C. Paperchase.*
*Mar. 25.—Worcester and District M.C.C. Evening Main Road (Reliability) Competition.*
*Mar. 25.—Essex County and Southend A.C. Fuel Economy Trial.*
*Mar. 26.—Ipswich and District M.C.C. Opening Reliability Tour.*
*Mar. 26.—Westmorland M.C.C. Social Run.*
*Mar. 26.—Blackpool and Fylde M.C. Reliability Trial.*
*Mar. 26.—Brighton and Hove M.C.C. Hill-climb.*
*Mar. 26.—Eccles and District M.C. Opening Run.*
*Mar. 26.—Stalybridge and District M.C. Reliability Trial.*
*Mar. 26.—Eccles and District M.C. Hidden Route Competition.*
*Mar. 26.—Coventry and District Works Motor Association. Social Run to Henley-in-Arden.*

### Stalybridge and District M.C.

A short reliability trial in the Ashopton—Glossop district will be held on the 26th inst. as an opening run. Members should note that the secretary is now Mr. T. W. Hamer, Hare and Hounds, Mottram Road, Stalybridge.

### Neath and District M.C.

The speed trials which are being held on Porthcawl Sands on Easter Monday are open to all members of the S.W. Wales A.C.U. Centre. All classes will be catered for, and ladies may compete free of charge. Entries close April 11th. The hon. secretary is Mr. Haydn Evans, 9, Windsor Road, Neath.

### West Kent M.C.

The club will meet at the Bull Hotel, Chislehurst, at 10.45 a.m. on the 26th inst. for the purpose of holding a new style of speed-judging contest. Members are particularly requested to be present themselves and to bring motor cyclist friends with them. An important announcement will be made.

### Redditch and District M.C.C.

An attractive programme has been arranged for the coming season, and five cups are being offered for competition amongst the members, including the B.S.A. and Terry Challenge Trophies.

The opening run is fixed for Saturday, and will be a half-day reliability trial under touring conditions.

### Lewes and District M.C.C.

In glorious weather on the 12th inst. the opening run to Godstone took place. The party, numbering nearly forty, were entertained to tea at Ye Claytone Hotel by their president, the Mayor of Lewes, Ald. C. Patrick, J.P., who journeyed there on his 2¼ h.p. Royal Enfield machine. The event was voted one of the most enjoyable the club had ever held.

### Mexboro' and District M.C.C.

On March 9th the club held its first whist drive and dance, which proved a huge success, over 200 persons being present. Great credit is due to the ladies attached to the club for the catering arrangements.

New members are joining each week, and a good programme of sporting and social events is being prepared. All motorists in the district are invited to join. The secretary is Mr. J. E. Major, 42, Temperance Street, Swinton.

### Bradford M.C. and L.C.C.

The first trial of the year (for novices) was to Richmond (Yorks) and back, and of 37 entrants five were non-starters and seven failed to finish. There were four lady competitors—Mrs. Appleton and Miss Barker, both driving P. and M. sidecars, Miss D. Sayles (Barnsley), (Scott sc.), and Mrs. F. W. Wood.

Result: 1st, Triumph Cup (held for one year) and gold medal, H. Barker (4 Triumph), error 52s. 2nd, silver medal, H. R. Humphries (Salmson car), error 53s.

### Manchester M.C.

A reliability trial was held in glorious weather on the 12th inst. The start was from the Nag's Head Hotel, Bucklow Hill, and 103 competitors were despatched at half minute intervals over an interesting course, the vicinity of the start being crowded with spectators. Results: 1, B. Duncan (3½ Norton); 2, C. Stevenson (Indian); 3, A. Allbone (4 Triumph).

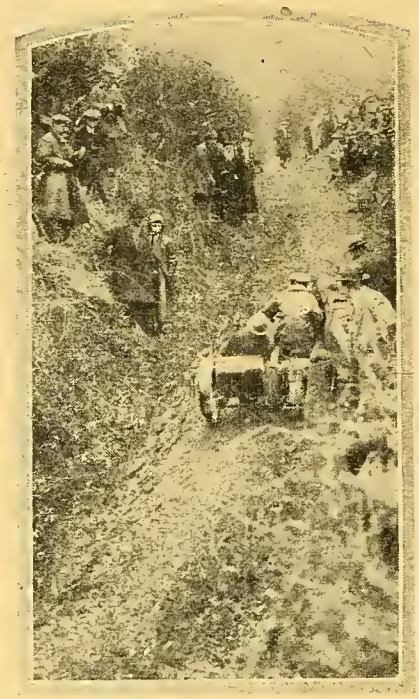
Particulars of the next event, a reliability trial for the Blake Challenge Cup, to be run on April 2nd, may be obtained from Mr. S. J. McCann, Beech Terrace, Heaton Park.

### Manx M.C.C.

The club did not receive sufficient entries for its hill climb, and in its place an open friendly competition was held. J. S. Mylchreest, with a 3½ h.p. Norton, made the fastest time, riding the two miles uphill and against the wind in 2m. 9s.

### Dublin and District M.C.C.

Taking advantage of the fact that St. Patrick's Day (last Friday) was a bank holiday in Ireland, the club ran off the first of its reliability trials. The course selected for the event lay for the most part in County Wicklow, the two chief test pieces of the day being the ascent of Annacreevy Hill, near Enniskerry, and Red Lane, leading from the seaboard to the Calary plateau. The weather conditions were extremely favourable, and with most of the roads in good condition the trial was deprived of a good deal of its terrors. Out of a field of thirty-two the following twenty completed the course: J. Browne (3½ Douglas), A. Carton (3½ Norton), F. O'Connor (3½ Douglas), H. Sinclair (8 Diatto), T. Sleyin (2¼ Velocette), Ed. McGuire (8 Enfield sc.), Richard Murphy (4 Triumph), H. W. Nesbitt (3½ Norton), J. A. Carville (4¼ B.S.A.), P. Grimes (8 Ariel sc.), J. Healy (4¼ Ariel sc.), A. A. Wayte (3½ Sunbeam), G. A. Daly (4 Triumph), R. Humphries (2¼ Velocette), L. McCullagh (3½ Norton), T. E. Green (3½ Douglas), D. Tyson (2¾ A.J.S.), F. J. McMullen (6 Campion), W. Burney (7.5 Deemster), and H. McAlister (2¾ A.J.S.).



IN THE "VICTORY" TRIAL. Not many of the sidecars reached as far as W. E. Bayliss's New Hudson outfit, which is on one of the critical patches of Sandy Lane.

### Reigate, Redhill and District M.C.C.

On Wednesday, April 5th, a paper-chase will be held, entries (2s.) closing on the previous Monday.

### Barrow and District M.C.

The club is holding a reliability trial on April 9th over a course including Coniston, Red Bank (down), Ambleside, Kirkstone Pass, Windermere, and Kendal. Any local motorists who would act as checkers or observers should communicate with the hon. secretary, Mr. W. B. Wilson, 6, Brown St., Barrow-in-Furness.

### Beds. Auto Club.

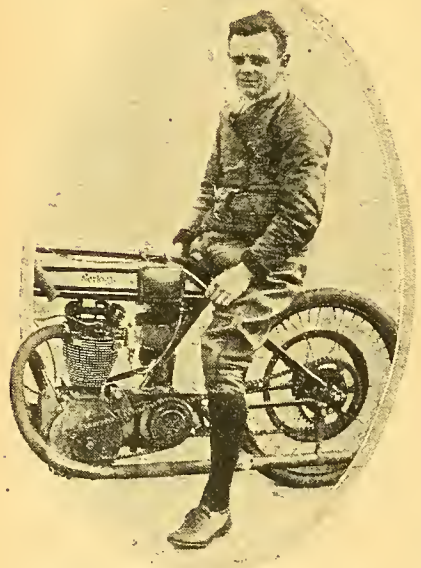
The above club has recently been formed with town headquarters at The Fountain Hotel, Bedford, and country headquarters at Hexton. A lengthy and interesting programme of social events, reliability and speed trials, has been arranged. All interested should apply to Mr. C. Whitworth, 11, St. Andrew's Road, Bedford.

### Herts M.C. and L.C.C.

An attractive programme has been arranged for 1922, and the membership now totals about 115, and is steadily increasing. The opening run, which will incorporate a distance-judging competition, has been arranged to start from headquarters at 3.30 p.m. on March 26th, finishing at the same place. Tea, followed by a lecture by Mr. C. F. Plowman on "Mountain Climbing," will be taken at Little Gaddesden

# OVERHEAD VALVE NORTONS AT LAST!

## Mean Speed Records Broken at First Appearance.



R. N. Judd and the o.h.v. Norton machine, on which he broke the international mile record; his mean speed was 88·39 m.p.h. for the two runs.

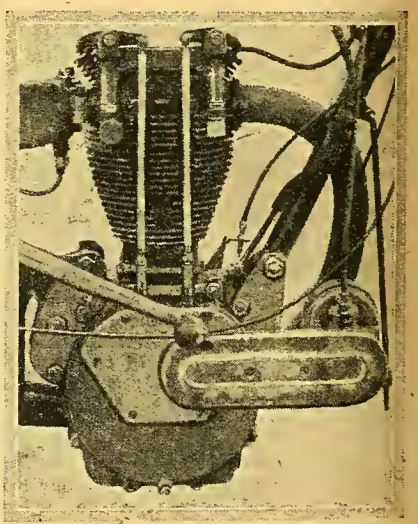
RECORD breaking in 1922 has been opened.

Riding a new o.h.v. 3½ h.p. Norton (70 × 100 mm. = 490 c.c.), R. N. Judd lowered the international mean speed figures for the kilometre and mile on March 15th. Over the kilometre in the ordinary direction the time taken was 23.96 secs., and the time in the reverse direction was 25.79 secs., the mean time being 24.87 secs., equalling 89.92 m.p.h. The two times for the mile were 39.48 secs. and 41.98 secs. respectively, the mean being 40.73 secs., equalling 88.39 m.p.h.

Judd's previous speed for the kilometre, attained a year ago, was 86.37 m.p.h., while the speed of the last holder of the international one mile record, E. B. Halford (3½ o.h.v. Triumph), was 83.91 m.p.h.

### Will One-way Records Fall?

Although the overhead valve Norton has been something of an open secret for quite a while past, this is its first official appearance in the public eye, and no doubt, ere long, it will be a formidable contestant in the lists for the kilometre and mile British records. At present the ultimate speed in the 500 c.c. class appears to be G. Dance's 93.99 m.p.h. over the flying kilometre with the 3½ h.p. Sunbeam.



An experimental Norton racing engine of 490 c.c. with overhead valves, which made its successful *début* at Brooklands on Wednesday of last week. This model is for the track only, and is not available for the market.

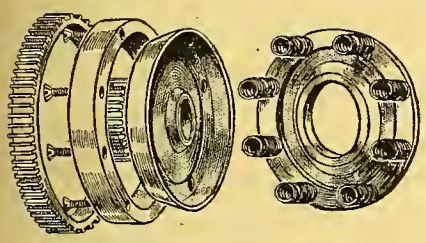
# A FLAT TWIN WITH ENGINE-GEAR UNIT.

## The Chain-driven Wooler Revived with many Improvements and Detail Refinements.

IN view of the recent revival of its manufacture, details concerning the new model chain-driven 2¾ h.p. Wooler are of interest.

One of the latest innovations is the fitting of a handle starter, which is applied directly to the engine-shaft and enables the engine to be pulled over compression from the saddle. As small engines of the flat twin type are usually easy starters, one pull up is generally sufficient.

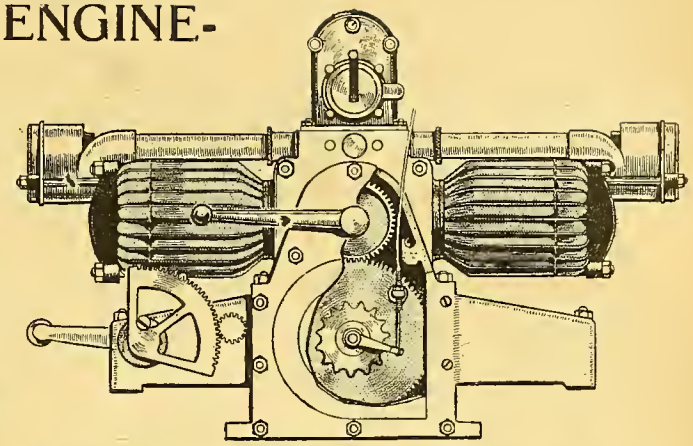
Another practical feature is a chamber screwed on to the bottom of the crank case for carrying the spare chain. It is retained by a single bolt, the chain reposing in the chamber between two thick pieces of felt; in this position it remains undamaged and cannot rattle.



Simplicity is the keynote of the 2¾ h.p. Wooler. The metal-to-metal cone clutch in the chain-driven model is shown with its component parts.

### Foot Control of Change Speed.

Among the peculiarities of the machine may be mentioned the method of changing gear by means of the foot, which is quite easy after a little practice.



Features of the 2¾ h.p. Wooler engine. Note the handle starter, which is an innovation, also the foot-controlled change speed gear. Oil is carried up on the two transmission gear wheels and splashed into the trough shown to the right of the clutch control cable, whence it is conducted to the principal moving parts of the engine.

The whole engine has been carefully thought out from start to finish, and particular attention has been paid to the lubrication. Oil is carried in a large sump at the base of the engine, and is taken up by means of gear wheels through a trough, whence it is conducted to the main bearings. The oil mist which escapes through the crank case breather is carried up into the frame tubes, trapped in the horizontal and saddle tubes, and allowed to drain from the latter back into the sump. This careful arrangement of the release, which is of the timed variety, keeps the crank case perfectly clean, and the whole system is most economical in oil consumption.

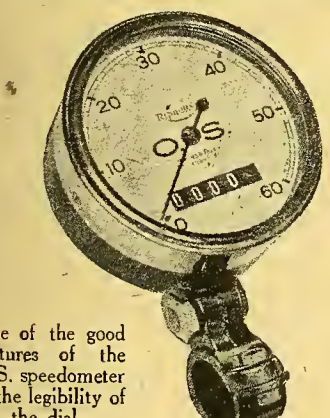
Though the bulk of our experience has been with the chain-driven Wooler, the belt-driven model is also a very practical mount, having a variable belt drive. It is worth mentioning that the Dederich-Wooler Eng. Co., Alperton, will sell this attractive little mount at £65. The chain-driven model, which is geared 5½, 8¾, and 16 to 1, is priced at £78.

---

# A MAGNETIC SPEEDOMETER.

## Simplicity, Sturdiness, and Legibility of Dial Features of the O.S. Instrument.

TO be added to the list of those speedometers which work on the magnetic principle is the O.S., an instrument of French manufacture, and popular among car owners before the war, but hitherto practically unknown to motor cyclists.



One of the good features of the O.S. speedometer is the legibility of the dial.

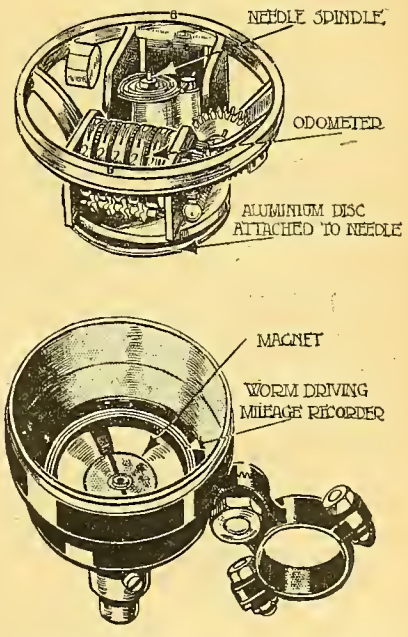
The outer casing is a die casting enamelled black, the rim which secures the glass only being plated. This rim is attached to the instrument by means of screws, is rendered dustproof by a rubber ring, and can easily be removed in the unlikely event of such a procedure being necessary.

### A Circular Magnet.

A circular magnet embedded in an aluminium cup is driven by flexible shafting from one or other of the motor cycle wheels. Immediately above it is an aluminium disc to which the spindle carrying the needle is attached. On the cup carrying the magnet being rotated, the eddy currents set up tend to carry round in the same direction the disc to which the needle spindle is attached. The system renders the instrument very sensitive and the reading of the hand quite steady.

On the outer edge of the cup carrying the magnet a screw thread is cut which meshes with the worm wheel driving the distance-recording mechanism.

There are dog couplings at either end of the flexible cable, and the small driven wheel is of fibre, consequently silent running is assured. The O.S. speedometer is sold by Messrs. Ripaults, 1, King's Road, St. Pancras, London, N.W.1.



Interior mechanism of the speedometer.

# SALES BY SIDECAR.

## How a 1914 Outfit with Special Tradesman Carrier Box aids a Vendor of ex-W.D. Goods.

MANY uses are made of the sidecar outfit as a business vehicle, and it is by no means surprising that its sphere should now include the door-to-door selling of the multitudinous surplus Government clothing, etc., at present on the market. Illustrated is the 1914 Matchless sidecar used by the Government Surplus Stores Co., Brighton Road, Croydon, regarding which the proprietor, Mr. Jupp, gives us some interesting particulars.

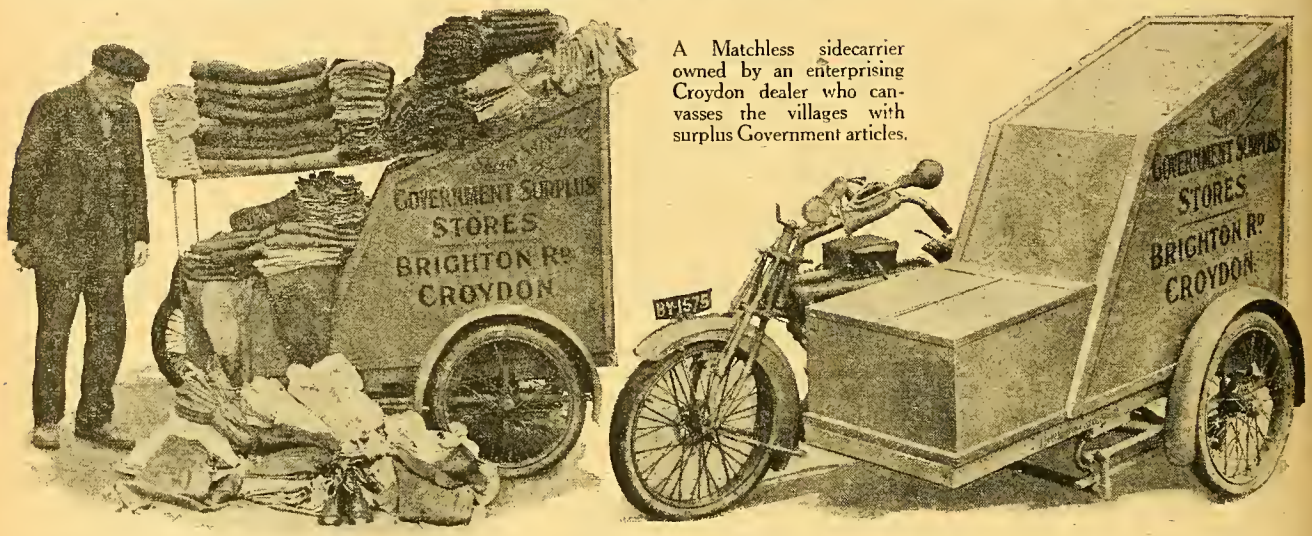
Covering about fifty miles per day, the outfit has been in use for two years without the slightest mechanical trouble. During week-ends an ordinary sidecar is substituted to provide transport for the owner's family.

Several features of the huge box carrier itself are not uninteresting. Its capacity is fairly obvious from the photographs, the floor dimensions being 6ft. by 2ft. If required, the box portion, which is made of three-ply on an angle iron frame, may be removed and the platform only used. The front compartment is generally used for small parcels and samples, while that in the rear carries goods in bulk for supplying village shops. One of the photographs shows the outfit laid out as a retail "shop."

Operating in the hilliest districts of Kent, the average petrol consumption works out at 48 m.p.g., the normal running speed being 30 m.p.h.

Mr. Jupp, who has registered the design, has found the carrier much preferable to the cheapest car on the following counts:

Lower fuel consumption,
Less running costs,
Greater speed,
Greater mobility, and
Less garaging difficulties.



A Matchless sidecarrier owned by an enterprising Croydon dealer who canvasses the villages with surplus Government articles.

# IRISH OLYMPIC GAMES.

## Two Road Races to be held under Government Auspices in Phœnix Park.

THE promoters of the Irish Olympic Games, which are to be held in Dublin in August next, have decided to include in the programme of events a course of motor cycle races, and have secured the co-operation of the Southern Centre of the Motor Cycle Union in the running of the events. As the games are being held under the auspices of the Government, there will be no difficulty in securing permission to close the roads, both for the races and the preliminary practising. The committee of the games has accepted the suggestion of the Union that the races should be held in Phœnix Park, where a circuit of nearly five miles is available. The proximity of the park to Dublin, and the excellent condition of its roads, should make the venue a particularly suitable one.

It is proposed to hold two races—one of twenty-five miles, with separate classes for 250 c.c. and 350 c.c. machines, and one of fifty miles for 500 c.c. machines. The races will be open to any person of Irish birth, and as quite a number of well-known figures in the English competitive world can claim that distinction, we have no doubt there will be a good many entries for the races from this side of the Channel.

Meantime, it may be added that the proposal to hold light car and motor cycle races in the South of Ireland, a suggestion which was urged on the Royal Irish Automobile Club by the trade, seems at the moment to hang fire, and the general impression is that the events are not likely to take place. On the other hand, the trade in the North of Ireland have made considerable progress with the light car and cycle races which they propose to hold on June 17th. A circuit of fifteen miles has been selected in Co. Antrim for the events. It does not seem to commend itself to those interested in light cars, but is regarded as not unsuitable for motor cycle racing.

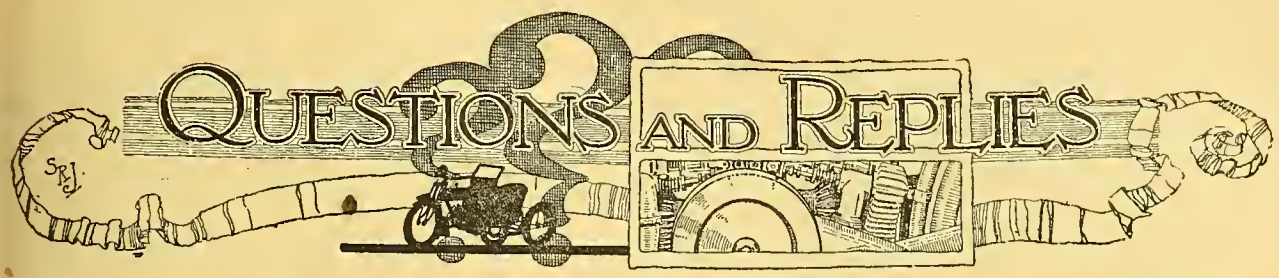
# FUEL CONSUMPTION TESTS.

MR. H. S. B. BOOTH, whose proposed private fuel consumption test has aroused such a storm of controversy, now replies to the A.C.U.'s statement of its position as outlined by Mr. Loughborough on page 314 of *The Motor Cycle*. He writes:

"I fear the A.C.U. *has* in some respects forgotten its *raison d'être*, and does not fully appreciate what the motor cycling public desire. If the A.C.U. *does* give authentic information (which Mr. Loughborough says is desirable), why did it not reply to the leader in *The Motor Cycle* of September 8th last when the published results of the A.C.U. Six Days' Trials (petrol and oil consumption tests) were described as 'Artificial in the extreme. . . . Competitors free-wheel down hills. . . . The figures for lubricating oil are in some cases unbelievable.'

"No criticism of a test could be more severe than that quoted above, and until the 'man in the street' feels convinced that he can get information that is authentic he will hold his private trials.

"My test will take place on April 29th."



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### VALVE OPERATION.

Has the usual method of operating poppet valves by cams always been used? If some other method was used at any time, why was it discontinued?—C.D.C.

Some form of cam mechanism has been used in the case of all motor cycle engines having poppet valves, although, of course, the cams may take widely different forms. For example, the early single-cylinder Motosacoche engines had a system of valve operation by means of a slipper running in a special track machined in the face of the flywheel. Probably manufacturing costs accounted for the discontinuance of this type.

### BURNT-IN PISTON RINGS.

With a Binks carburetter on a 1920 Triumph two-stroke I average 125 m.p.g. The machine runs well, except that I get the piston rings stuck up. When I first decarbonised after 1,000 miles I found the two top rings stuck fast on the exhaust side, the same thing happened at the end of the next 800, the next time after only 460. Up to that time I had been using heavy oil, mixing according to instructions (four measures of oil to one gallon of petrol, which works out at two-third pints to one gallon, or 1 in 12). I was advised by a motor cyclist having a Royal Enfield two-stroke to try another brand of rather lighter body. I have just completed 620 miles on this oil, and find that two top rings are stuck fast again on the exhaust side. The rings are a good fit both in the grooves and the cylinder. Would you advise a different brand of oil or, say, a smaller quantity of this, as I find a good deal of oil deposited in the silencer pipe. I do not overdrive, and very seldom exceed 20 m.p.h.—B.C.M.

The trouble you describe is common to many forms of two-stroke engines, and it is unlikely that any difference will be made by changing the brand of oil; a slightly smaller quantity of oil might improve matters to a certain degree, and it might be as well to increase the vertical clearance of the rings a little. As your rings appear to get stuck up rather more frequently than should be the case, you will be well advised to apply to the manufacturers, as they may be able to supply a set of rings having greater clearances than those fitted.

## Important Dates.

**Sat., Mar. 25th—East Midland Centre A.C.U. Open Reliability Trial.**
**Sat., Mar. 25th, to Sun., April 9th—Tour de France.**
**Fri., Mar. 31st, to Thur., April 6th—Amsterdam Show.**

### AN UNUSUAL CONNECTING ROD.

The connecting rod big end of my 2½ h.p. four-stroke engine is L shaped, *i.e.*, the big end bearing is off set from the connecting rod centre line. In which way should the rod be assembled in relation to the direction of rotation, and what would be the result if it went the reverse direction? Would it affect the balance of the engine?—T.R.

A connecting rod of the type you describe is very unusual in a single-cylinder engine, though it is not uncommon in V twins, where it is used to avoid the forked rods fouling. It should make practically no difference which way the rod is erected, since it is merely a means of connecting the gudgeon pin and crank pin, the relative positions between which cannot be altered by the shape of the rod.

### FITTING MAGNETO CUT OUT.

Can I tap the low-tension current of my Bosch magneto in order to fit a cut-out switch by fitting an insulated bolt in the centre of the contact breaker cover, and arranging thereon a spring blade to make contact with the contact breaker centre screw? There is a hole in the contact breaker cam ring, but I cannot make out what it is for?—A.H.C.

The device you suggest would be quite satisfactory. The hole you mention was probably used at one time for the same purpose, a pin passing through an insulated bush in this hole, with an L shaped spring leading to the nut forming the low-tension contact to which the switch wire would be connected.

### TIMING A.I.V. TWIN.

How should my Rex be timed? It is an old machine of 6 h.p. with automatic inlet valves, and what I should like to know is how to set the cams, as they are separate. When I get one exhaust valve full open where should the other one be?—J.R.C.

Set the timing of both your cylinders separately. The exhaust valve should close when the piston is on top dead centre. If this is set correctly for the rear cylinder, the crankshaft should then be turned a complete revolution, and a part of a revolution more until the front cylinder is at the top of its stroke. The exhaust valve in this cylinder should then be just closing.

### TIME LIMIT FOR POLICE SUMMONS.

I have received a summons for driving a motor cycle without a registration licence four months ago. Is this summons in order, as I am under the impression that if notice is not given within twenty-one days from the alleged occurrence it is invalid?—S.D.

The summons may be issued any time after the infringement of the law to which it refers.

### REPAIRER'S RESPONSIBILITY FOR DAMAGED ENGINE.

Recently I had the misfortune to break the gears of my cycle car, which I left at a garage for repairs. Learning that the machine was ready, I went for it, but on arrival found that in trying the engine to test the job one of the cylinders had blown clean off, also smashing the piston and bending the connecting rod. The garage people state that they cannot accept any liability for the damage, and maintain that the cylinder had previously been welded, of which I have no knowledge. They propose to charge me for the cost of the new parts, and I should be glad if you would inform me if I have any legal redress.—F.M.

If you can show by means of expert evidence that the damage which was done at the garage was due to the negligent way in which the repairers were carrying out the work, then you can insist upon such damage being made good free of charge. In a case like the one you describe, however, it might be argued that a cylinder may blow off at any time, for although it is unusual, it nevertheless does happen at unforeseen times.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.*

"C.H.S." (Finchley).—3 h.p. N.U.T. Speed on hills, etc.; stability.

"A.R." (Manchester).—4½ h.p. Quadrant sidecar: Consumption, etc., and ground clearance.

"R.F.B." (Wymondham). — 2¾ h.p. Raleigh: Power, speed, most suitable carburetter for sports model.

"W.H.J." (Market Drayton).—2¾ h.p. chain-drive New Imperial, 2¾ h.p. Diamond-Jap, and Raleigh.

"J.C.C." (India).—5-6 h.p. Raleigh and 8 h.p. Excelsior-Blackburne sidecars.

"W.B.-S." (Lancaster).—Scott Sociable in rough, hilly country; front wheel drag on hills.

"N.C.D." (Richmond). — Blériot-Whippet belt-driven model.

"W.F.Y." (Holytown).—8 h.p. Rex-Acme sidecar, Model G.

"H.R.T." (Bristol).—2¾ h.p. two-speed Excelsior-Jap.

"J.D.M." (Edinburgh).—4-5 h.p. New Hudson sidecar.

"C. La C." (Streatham).—2¼ h.p. Royal Enfield: Suitability for pillion riding.

"C.H.G.G." (Battersea).—Suitable free-engine clutch for J.E.S.

"K.W.F." (Walsall).—2¾ h.p. three-speed Raleigh, 2¾ h.p. three-speed Excelsior-Blackburne, and 2¾ h.p. New Imperial.

"C.S.B." (Leicester).—2¾ h.p. Coulson-B.

"T.R.H." (Brixton). — Indian, 1916 speed model. Single gear Norton with or without Philipson pulley.

"N.J." (Willington).—P. and M. renovated W.D. model with sidecar.

"J.W.H." (Bakewell).—Starting tips for 1919-20 4¼ h.p. B.S.A.

"W.F.T." (Morpeth).—2¾ or 3 h.p. Raleigh.

"A.B.C." (Cheshire).—Any folding sidecar on 2¾ h.p. machine.

"R.C.C." (Berkeley).—Hints on overhauling and maintenance of 3½ h.p. 1914 Sunbeam engine gears and clutch.

"J.J.J." (Shotley Bridge). — Motor-assisted bicycles.

"G.T.G." (Cheltenham).—8 h.p. L.S.D.

"A.L." (Brighton).—Philipson pulley on 2¾ h.p. O.K.

"D.R." (Tollington Park).—4½ h.p. Quadrant sidecar.

"JEB" (Stockton-on-Tees). — W.S.R. adapter on 2¾ h.p. Douglas; or other Amac carburetter.

"A.H.S." (Tonbridge).—2¾ h.p (Model B1) A.J.S. or 2¼ h.p. sports Velocette.

"SUNBEAM" (Bristol).—Johnson's Wax on Sunbeam tank: Effect on gold lining. Also Sparxekas.

"S.J.P." (Cambridge).—L.S.D. three-wheeler.

"PRECISION" (Worcester). — Highest speeds obtained with Precision two-stroke: Gear ratio used and plug.

## READERS' REPLIES.

### GEAR RATIOS FOR INVALID TRICYCLES.

A reader, "R.F.G." (Weymouth), points out that the Auto-Wheel camshaft only runs at quarter engine speed, therefore the actual ratio is 10 to 1, and the ratio in relation to a 26in. wheel is about 12½ to 1, or double the figure given on p. 319 of our issue of March 9th.

### MOTOR CYCLES AND NERVES.

With reference to "H.S." and Mr. S. R. Giddings' letters on the above subject, I should like to state my experiences and ask your readers' opinion. I have possessed nine motor cycles since leaving the Army from 2¾ h.p. to 8 h.p., all solo. These I could drive at their top speed without feeling any ill-effects, but on attempting to drive with a sidecar attached (I have made three attempts—4¼ h.p. B.S.A., 6 h.p. Rex, and 3½ h.p. Premier) I have crashed every time, as I shoot off to the right after about the first twenty yards. This may be explained by the fact that I still carry a small portion of Krupps' output in my head; but I have done 50 m.p.h. solo, so *pourquoi?*—NOT YET BEATEN.

### DIFFICULTIES WITH A "TWO-STROKE."

In my opinion it is not the carburetter that is the cause of the "popping back," etc., but the magneto. If "H.L.L." will closely examine this unit he will find that the loose fibre roller has become worn (due to coming into constant contact with the spring) to such an extent that the spring catches the roller and hinders it on its course. I have experienced the same trouble with a similar machine, which absolutely refused to run easily, but on engaging bottom gear would pick up. The reason for this was when going slowly on top the spring would catch the roller, causing misfiring, but on engaging bottom gear and increasing the revs. the roller would force its way. With regard to "H.L.L." using a 34 jet, this also accounts for the consumption. I use a 27 with excellent results.—OWEN E. JONES.

### Successful Small Two-stroke.

In the Colmore Cup Trial, the 2¾ h.p. Allon sidecar, driven by L. E. Clulee, was the only two-stroke passenger machine of its power to gain an award.

### A British Win in Spain.

At a recent hill-climb near Madrid a Gradua-geared Zenith-Bradshaw is reported as winner in the 500-600 c.c. class at 84 km.p.h. (approx. 52 m.p.h.).

### Long Connection Severed.

The position of managing director of F.N. (England), Ltd., has been relinquished by Mr. A. E. Gelder; he held the post before the war, and resumed it immediately after the Armistice.

### For Home-made Screens and Hoods.

Celluloid sheet, in any size up to 56in. × 24in., is supplied by Conpé Windscreens, 28, Middle Street, Portsmouth, at 3s. per square foot. The same concern also markets waterproof twill at 12s. 6d. per yard (72in. wide), and cloth-to-cloth press-studs with celluloid tops at 1s. 10d. per dozen.

### Catalogues Received.

The Firestone Tyre and Rubber Co., Ltd., 216, Tottenham Court Road, London, W.1.: A folder giving the latest prices of Firestone motor cycle tyres. Firestone prices have been considerably reduced.

Massey-Arran Motor Co., Ltd., Bordesley Street, Birmingham: The models described are the popular Blackburne, B., the Brooklands sports J.A.P., the Brooklands sports Blackburne, and the T.T. type with overhead valve Blackburne engine. All are of 2¾ h.p.

Leicester Rubber Co., Ltd., Post Office Place, Leicester: Catalogue of John Bull motor cycle tyres, belts and such accessories as belt punches, knee grips, tubing for acetylene lamps, footrest rubbers, rubber handle-bar grips, horn bulbs, repair outfits, and motor cycle clothing.

Whitley Manufacturing Co., Ltd., Charterhouse Mills, London Road, Coventry: A folder giving particulars of Whitley sidecars and accessories, including a luggage carrier, pedal clutch control for Sturmey-Archer gear boxes, and chain adjuster for use with the same component.

## Three Attractive Value-for-Money LIGHTWEIGHT PROPOSITIONS

**THE QUALITY HENLEY**

Built as it is throughout, from components bearing such irreproachable names as Blackburne, Burman, and Brampton, this beautiful machine stands head and shoulders above the ordinary assembled lightweight by reason of its superb finish and detail refinement. The price, too, is attractive. Three-speed 2¾ h.p. Blackburne engine .. .. **70 Gns.**

**THE BIG-HEARTED RADCO**

A machine of special appeal to the man who requires a sturdy, reliable machine, made by a firm with a first-class reputation at the lowest possible price. The single-geared model at **34 Gns.** is the lowest-priced REAL motor cycle to be bought, while you can obtain the same equipped with a two-speed clutch and kick-start gearbox for .. **45 Gns.**

**THE THOROUGHBRED EXCELSIOR**

A range of lightweights made by a firm with nearly half a century's reputation—each a leader in its particular class. Economy is a special feature of these machines—both to buy and maintain—while the finish is second to none on the road. The 2½ h.p. Excelsior Villiers two-speed Sturmey Archer clutch and k.s. at **£53** is outstanding value. Complete with electric lighting set and lamps **£57 10**

**FRANK HALLAM,**
**Dalton St.** (two doors from Bull Street) **Birmingham**
and 88, BRISTOL ST. ('Phone: Midland 1472).

Full Market Price allowed for your present machine in exchange. Easy payments direct with the purchaser only 4 per cent. extra.

An Opportunity for Enterprising Agents.

THE MOTOR CYCLE

Insurance Policies

IMPORTANT AGENCY EXTENSION

SERVICE to your clients should include the best and most reliable Motor Cycle Insurance Agency it is possible to obtain.

The Policies you recommend should carry a name that inspires confidence and gives an assurance of prompt and generous settlement of claims.

From your own point of view it is desirable that you should represent a company that enjoys the highest reputation among the motoring public, and be able to offer policies that are known to give complete and comprehensive cover.

**An extension of the Agency and Service arrangements for "The Motor Cycle" policies is now being made, and applications are invited from agents who realise the value of specialised experience and the importance of maintaining the goodwill of their clients.**

Here is your opportunity of handling policies that every motor cyclist knows and the value of which he fully appreciates.

## HERE is the LAMP

### —the famous F.R.S. Streamline Projector Set

—recommended and accepted by experienced motor cyclists and leading manufacturers as the standard lighting equipment for 1922. Unequalled for beauty, quality, and value—its scientific construction is patented, therefore cannot be imitated—and its superior light-giving power is never questioned. Comparison will prove our claims but—when comparing, bear this important point in mind, that the body diameter of the smallest size is 5 inches.

5" **45/-** 6" **66/-** 7" **99/-**
POST FREE.

**10/6** POST FREE.

## HERE is the HORN

—as supreme as the lamp—handsome in appearance, distinctive in tone. Has no equal for absolute quality and finish, even at 20 per cent. more in price The special bulb and strengthened neck ensures greater durability.

13" **10/6** 15" **18/6** POST FREE.

## HERE is the HOLDER

—another example of F.R.S. supremacy. Has no loose nuts and bolts, sharp edges or ugly clips. Secured together by ONE patent binding rim and ONE large nut. Absolutely watertight, adjustable to any angle, made of BRASS throughout. Supplied in any finish. **5/-** POST FREE.

Our guarantee of "Satisfaction or money refunded" is your safeguard in buying—order NOW while we can give immediate delivery. Complete List on request.

## 100 Miles an Hour!

BROOKLANDS track has only recently been reopened for 1922 racing, but already one of the outstanding achievements of motor cycle history has been accomplished thereon—a 500 c.c. machine has been officially timed to attain a speed of 100 m.p.h. over a distance of half a mile.

Although this short distance is not recognised for official record purposes, its merit is undoubted, since much discussion of late has centred around the possibility of a 500 c.c. machine attaining three-figure speeds during the present year. It must be remembered that at the close of 1921 the greatest speed to the credit of any 500 c.c. machine was 93.99 m.p.h., and to increase that figure by 6 or 7 m.p.h. seemed to be a matter of at least a season's careful tuning and testing, for the addition of even one mile an hour at these almost phenomenal speeds is a prodigious task when it is remembered that wind resistance (the greatest force the speedman has to overcome) increases as the square of the speed. Nevertheless, no sooner was the track available than the speed leapt up almost at once to 98.11 m.p.h., almost immediately afterwards raised to 98.50 by a rival machine—the contestants being flat twin and single respectively.

### A Success for the Flat Twin.

Ultimately the former type attained the signal honour of topping the 100 m.p.h. mark over an officially timed distance. It is little more than six months ago that the three-figure speed was reached by an American 1,000 c.c. machine, yet to-day we have British 500 c.c. machines creeping up in close pursuit. It now only remains for a Class C mean speed international record to be brought up to the same level, to mark another epoch in the development of the motor cycle.

Students of engine design will not fail to notice that all the machines which have recently raised the sprint speeds of the 500 c.c. class have been engined with units of the overhead valve type, and although the general tendency of racing men has been to favour the single cylinder engine, it has remained for a horizontally opposed twin to show that over 100 m.p.h. was attainable by a 500 c.c. unit. Whether this type of engine can prove its staying power to the extent of converting 100 m.p.h. into an international mean speed record, and incidentally proving its independence of such adventitious aids as favourable winds and gradients, remains to be seen. Perhaps, in a few days or weeks, or may be even as we write, the "$3\frac{1}{2}$" single will demonstrate its ability to record this achievement. It must not be overlooked, however, that it is a feat the accomplishment of which is beset with many difficulties.

### What International Records Mean.

These sprint performances which astonish everyone from time to time are largely made possible by the astute selection of the opportune moment. Having developed the engine to its maximum state of efficiency it is difficult to keep it in tune for more than the concentrated effort which will carry it over the sprint distance. To qualify for an international record, which involves a run *both* ways, with and against the wind (should the atmosphere not be calm at the moment) demands the possibility of much higher speed under favourable conditions than the ultimate mean speed often implies. In securing an international record, all the help gained by swooping down the banking with the generous help of a 60 m.p.h. following wind is eliminated on the backward journey; it follows, therefore, that for mean speed records a calm day is essential.

Meanwhile, all honour to the first man and machine to bring a three-figure speed with a 500 c.c. engine into the realm of accomplished fact.

An index to the advertisements in this issue will be found on the page facing the back cover.

# 100 m.p.h. with a 500 c.c. ENGINE

C. G. Pullin (3½ o.h.v. Douglas): 100·06 m.p.h.
R. N. Judd (3½ o.h.v. Norton): 98·50 m.p.h.

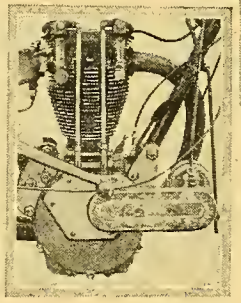
## Remarkable Speeds at Brooklands. A Landmark in Progress. History of 500 c.c. class Speed Records.

TWELVE months ago 100 m.p.h. on a motor cycle of any power had yet to be accomplished in this country; last week a 500 c.c. machine, of the popular "3½ h.p." class, attained the magic figure, the honour of being first going to C. G. Pullin on an o.h.v. flat twin Douglas.

Several people were known to be in the running for some time past—George Dance on a new o.h.v. Sunbeam, F. B. Halford on a four-valve Triumph, R. N. Judd in combination with D. R. O'Donovan and the o.h.v. Norton, and C. G. Pullin and his Douglas—but actually the tussle resolved itself into a duel between the Norton and Douglas camps to be settled before the other two made an official reappearance on the track

### A Flat Twin Triumphant.

The game was opened on Tuesday of last week by C. G. Pullin (T.T. winner of 1914), who succeeded in sending up Dance's (Sunbeam) 93.99 m.p.h. for the flying kilometre nearly 5 m.p.h. to 98.11 m.p.h., and Halford's 87.89 m.p.h. to 93.26 m.p.h for the mile. Hand timing was employed in this instance.



490 c.c. o.h.v. Norton.

On the very next day, however, incidentally a bitterly cold one, Judd decided that the o.h.v. Norton had already proved fast enough to better these amazing speeds. Accordingly an attempt was made, this time with electrical timing attended to by Col. Lindsey Lloyd himself, for it was recognised that an error of a fraction of a second might mean the difference between success and failure.

At first ill-luck attended him, and a broken inlet valve spring caused some delay.

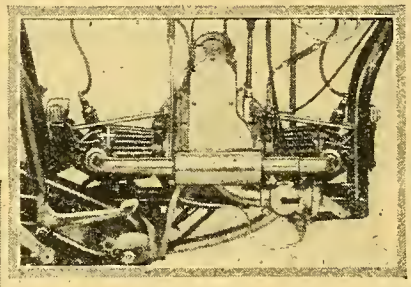
It was nearly lunch time before the overhead Norton was lovingly pushed half-way up the test-hill—to ensure a certain start—but once going it was only a matter of seconds before it was all over. At his first run he lifted the mile and kilometre speeds to 97.35 m.p.h. and 98.50 m.p.h.

The figures were:

| Classes C and D. | | |
|---|---|---|
| Kilometre ... | 22.71 sec. | 98.50 m.p.h. |
| Mile ... ... | 36.98 sec. = | 97.35 m.p.h. |

Equipment used included: Dunlop tyres; Binks carburetter; C.A.V. magneto; Speedwell oil; and Pratt's spirit.

Col. Lloyd was obliged to leave the track immediately, and consequently the machine was locked up until it could be officially measured. But not before Mr J. L. Norton, who had witnessed the attempt, had demonstrated to our representative how remarkably cool the engine had kept. It was possible, less than five minutes after, to keep the ungloved hand against the cylinder, then barely warm.

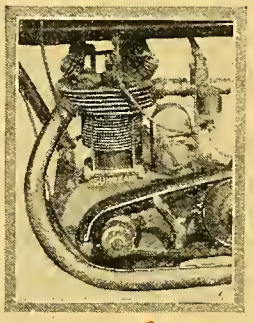


494 c.c. o.h.v. Douglas.

Three 500 c.c. o.h.v. engines which have been instrumental in forcing up the short distance speeds at Brooklands. Douglas holds the coveted honour of being the first "3½ h.p." machine to accomplish 100 m.p.h. The Norton and Sunbeam were runners up.

### The High Efficiency Single

As we indicated last week, this design is in a very experimental stage; so much so that lugs are cast in the cylinder head for one type of valve rocker gear, while an entirely different type is used. Speaking generally, the most striking points visible to the eye are (1) the massive nature of the valve gear and (2) the depth of the radiating fins—incidentally always a Norton feature.



499 c.c. o.h.v. Sunbeam.

Asked how it was done, Mr. Norton would volunteer no further information than "careful consideration of the effect of one thing upon another." A Ricardo piston was used, but we were assured that none of the reciprocating parts are lighter than on the standard B.S. engine.

All the Norton people were confident that they had by no means reached their limit, and that even more startling speeds would be reached very shortly.

All this time, however, Pullin had been working steadily in an endeavour to extract an extra ounce or two of power from his Douglas, and it is said that not before two o'clock on the following morning did he cease from this labour of love.

**100 m.p.h. with a 500 c.c. Engine.—**

His industry was rewarded, for a few hours later, on Thursday, there fell to him the signal honour of being the first man to be timed officially on a 500 c.c. machine at 100 m.p.h., and also to regain the flying mile and kilometre records.

Pullin's figures are doubly remarkable in that his speed for the mile, 99.98 m.p.h., is faster than that for the kilometre, 98.76 m.p.h. This is explained by the fact that he only gained the full benefit of the wind towards the end of the measured section. (It is only fair to add that Judd, the brilliant Norton exponent, was similarly helped on the previous day.)

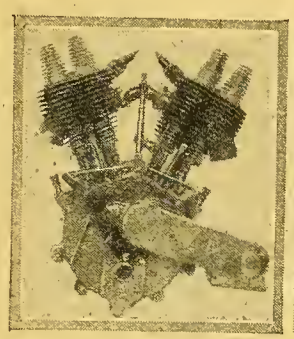
### Wonderful Speed of Pullin's Douglas.

Pullin's 100 m.p.h. was accomplished over the second measured half-mile, his exact time being 17.89 sec. = 100.06 m.p.h. The first half-mile was traversed in 18.26 sec. = 98.57 m.p.h.

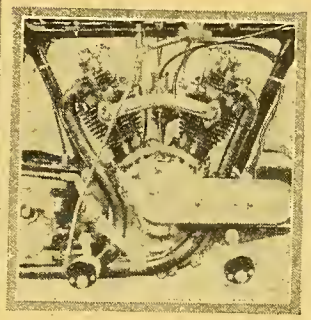
His record figures were:

Kilometre.
22.69 sec. = 98.76 m.p.h.
Mile.
36.15 sec. = 99.98 m.p.h.

Equipment used included: Hutchinson tyres; Amac carburetter; E.I.C. magneto; Lodge plugs; Renold chains; Castrol oil; and Pratt's spirit. Although Pullin was officially timed, a half mile is not a recognised "record" distance.



Side-by-side valve J.A.P.



Overhead exhaust valve Martinsyde.

Two varying types of twins which have also made good performances on the track.

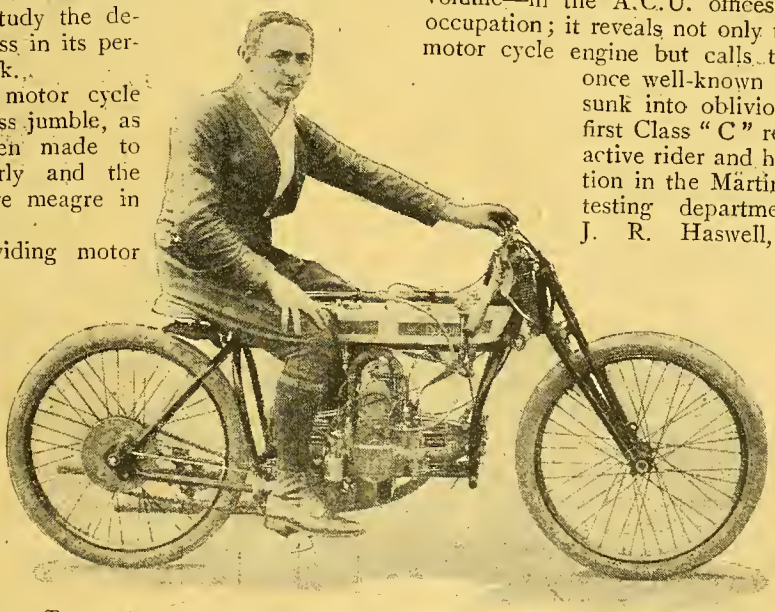
## Looking Back—500 c.c. Records from 1909 to 1921.

In view of the marvellous speeds which have been attained by the 500 c.c. machines, it will repay us to study the development of this class in its performances on the track.

Previous to 1909 motor cycle records were a hopeless jumble, as no attempt had been made to classify them properly and the details published were meagre in the extreme.

The credit of dividing motor cycles into classes was due to the enterprise of the British Motor Cycle Racing Club, for in 1909, the first year of its foundation, in the second race meeting reported, there were two classes in the hour race—"A" for machines up to 500 c.c., and "B" for machines up to 1,000 c.c.

The next meeting of the B.M.C.R.C. marked the foundation of the classes as we now know them, which were finally adopted by the A.C.U., though, of course, many others have been added. Their first appearance in print is in the announcement of the third members' meeting, event 4, record time trials, in which the classes stood as follows:—Class "A," 275 c.c.; "B," 350 c.c.; "C," 500 c.c.; "D," 750 c.c.; and "E," 1,000 c.c. No records were made during the meeting, and it was not until the next one that H. H. Bowen, 3½ h.p. Bat-Jap, covered the kilometre in 36.40 sec. (65.02 m.p.h.) and the mile in 56 sec. (64.28 m.p.h.). This was on July 14th, 1909.



To the 3½ h.p. o.h.v. Douglas has fallen the honour of being the first machine in the 500 c.c. category to attain a speed of 100 m.p.h. It was ridden by C. G. Pullin at Brooklands on March 23rd.

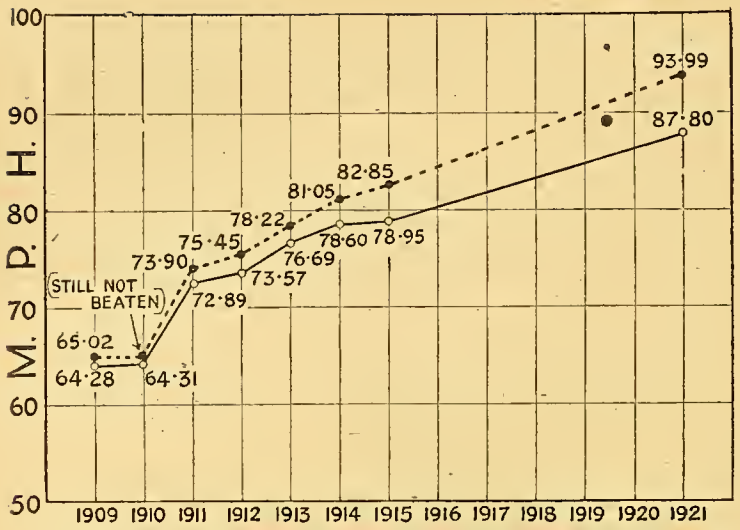
### The Keenly Contested Class "C."

For many years "Class C" motor bicycles—3½ h.p. (500 c.c.) machines have been looked upon as general utility mounts. They were not too heavy, were fast enough for high speed touring, and when provided with suitable change-speed gears, capable of taking a sidecar anywhere. This, then, was the type of machine which received the greatest encouragement, and for fourteen years has marked the largest engine size permitted in Tourist Trophy races. What remarkable developments have been made in the last twelve years! Between Bowen's successful attempt in 1909, and Dance's achievement at the end of last year there is a difference of nearly 29 miles an hour, a 44.57 per cent. increase.

Perusal of the great record book—a really ponderous volume—in the A.C.U. offices is a most interesting occupation; it reveals not only the development of the motor cycle engine but calls to mind the names of once well-known riders which have now sunk into oblivion. While Bowen, the first Class "C" record holder, is still an active rider and holds an important position in the Martinsyde experimental and testing departments, enthusiasts like J. R. Haswell, the private owner Triumph rider, whose records are in the list before us as we write, and G. Lee Evans, the brilliant Indian exponent, are no more seen on the track, and younger riders know them not.

### Singles Pre-eminent in 500 c.c. Class.

It is worth noting that few records have been made with machines fitted with multi-cylinder en-



Annual progress of the flying mile (full line) and kilometre (dotted line) records from 1909 to 1921. Last week 99·98 m.p.h. was attained over the flying mile.

gines, only three makes figuring in the Class "C" list, these being a Martin-Jap, an A.B.C., and a Douglas.

### Flying Kilometre Speeds.

Looking over the records of past years, we see remarkable increase in speed, and although Bowen's record stood till the following year, it was then beaten by Martin in 1911, the date from which our graphs start. Here, it will be noticed, is the first twin-cylinder machine entered, and over the flying kilometre the victorious rider's speed was 73.90 m.p.h. The 80 miles an hour mark was not reached until Emerson, on the old A.B.C., covered 80.47 m.p.h. in 1914; but he was beaten by D. R. O'Donovan on a Norton, who held the record for the same year with a speed of 81.05 m.p.h. In 1915 O'Donovan again bettered his own record by covering 82.85 miles an hour, only to be outclassed by George Dance on a Sunbeam in November last year (93.99 m.p.h.).

### The Coveted Mile Record.

As regards the mile, the late J. Gibson only managed to beat Bowen's 1909 record in the following year by 0.3 miles an hour, but Martin, on the same machine as referred to above, beat the record easily in 1911, and the speeds gradually crept up until 1915, when O'Donovan did 78.95 m.p.h., a record which he held until F. B. Halford, on the o.h.v. Triumph, wrested it from him last year, accomplishing a speed of 87.80 m.p.h.

### Over Longer Distances.

Regarding the history of the flying 5 miles, it was not until 1911 that any speeds were recorded, and the first was by Stanhope Spencer (Rudge), who opened the ball with 65.79 m.p.h. This was beaten by G. E. Stanley (Singer) in 1912, and again in 1913, in the former year by 5 miles an hour, and by rather over 2 miles an hour the following year. O'Donovan again triumphed in 1914, covering the distance at the rate of 75.88 m.p.h., a record which he held until last year, when Halford (o.h.v. Triumph) handsomely beat it with a speed of 81.78 m.p.h.

The flying 10 miles has only two entries in its history: 1913, when Stanley, on a Singer, did 70.39 m.p.h., and in 1921, when Dance, on the Sunbeam beat his record by 12.30 miles an hour (82.69 m.p.h.).

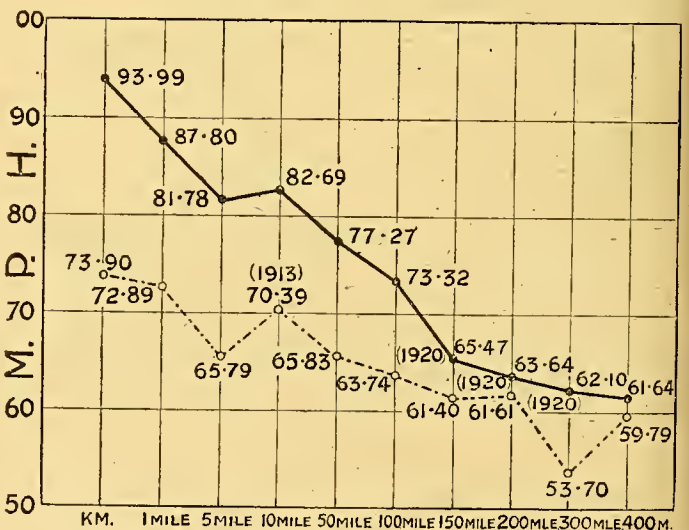
The 50 miles record dates from 1909, when G. Lee Evans, on an Indian, put up the speed of 51.42 m.p.h., a record which stood for two years until Spencer, on a Rudge, raised the speed to 65.83 m.p.h. The wizard, Stanley, again figures in the list in 1912, putting up a speed on the Singer of 69.43 m.p.h., a record which held until last year, when it was decisively beaten by Halford's Triumph with a speed of 77.27 miles an hour.

### Long Standing Figures.

Naturally, in the long distances the average speeds were comparatively small until modern times. For example, in 1909, the first year of the 100 miles record, G. Lee Evans, on the single-cylinder Indian, averaged 52.48 m.p.h. This was soundly beaten by Spencer on the Rudge two years later with a speed of 63.74 m.p.h., while J. L. Emerson, on the Douglas, last year beat the record, his speed being 73.32 m.p.h., surely a wonderful average for so long a distance.

In the 150 miles, McNab, on the Trump, first appeared on the list in 1910, making a speed of 52.54 m.p.h. This, Haswell took away from him the following year on his Triumph, covering the distance at a speed of 61.40 m.p.h. Haswell's record stood for nine years, and was not beaten until 1920, when V. Horsman (Norton) averaged 65.47 m.p.h.

In the 200 miles there are only two entries in the list: the redoubtable Haswell, again on his Triumph, in 1911, his speed being 61.61 m.p.h.; and D. R. O'Donovan (Norton), who beat him in 1920 by 2.3 m.p.h. (63.91 m.p.h.).



1911 (dotted line) and 1921 (unbroken line) records showing comparative speeds in the 500 c.c. class.

**00 m.p.h. with a 500 cc. Engine.—**

**Three, Four and Five Hundred Miles.**

The 300 miles has likewise only two entries; in 1912 V. L. Rhys, on a Rudge, put up an average of 53.70 n.p.h., which was not beaten until 1920, when J. L. Emerson, on a post-war A.B.C., accomplished 62.10 n.p.h., a record which still stands.

The year 1911 also marked the first entry in the ecord list of 400 miles, which was held jointly for en years by C. G. Pullin and T. E. Greene (Rudge), he speed being 59.79 m.p.h., and this was not beaten until 1921, when Horsman, on a Norton, put up a speed of 61.64 m.p.h.

A two-stroke heads the list in the 500 miles, this being the first appearance of its type in the Class "C" records. The rider was S. Gill (345 c.c. Alecto), and his speed was 41.71 m.p.h., but this was soundly beaten by Horsman (Norton), who put up a speed of 62.31 m.p.h. the following year—1921.

In the longest distance record of all—600 miles—in this particular class, the Norton again triumphs, ridden by D. R. O'Donovan and H. H. Beach, who in 1920 accomplished a speed of 54.40 m.p.h.

# A STUDY FOR PESSIMISTS.

RACING a motor cycle engine whilst on the stand is a detestable habit. It is tolerated in a garage, or under special circumstances on the road, but when an individual persists in stopping and starting his engine twenty times in the course of a quarter of an hour for no apparent reason, one does begin to feel one's nerves fray. The obvious course was for me to quit the place I had chosen for my lunch, but being such a delectable spot I hated to leave it.

A narrow grassy lane led past the rose-embowered cottage and on to undulating tilth and pasture. The setting of the little house was perfect. Nothing marred the harmonious whole except the tinkering motor cyclist. Fleecy clouds drifted across a blue sky, and a faint smell of burnt wood bark and peeled willow pervaded the air.

A moment's cessation, a moment of heavenly silence, when the bees could be heard buzzing from flower to flower. I filled my pipe, and thanked Providence that the fellow with the machine had by this time ceased to tinker. Ordinary tuning I could have understood, but what tuner would allow his engine to rev. appallingly for minutes on end?

The spell of silence was short, however, and once again the din started. This time I decided to investigate, and approached the cottage, where I saw a youth of twenty or so in a red blazer and white trousers standing in a curiously intent attitude listening to the beat of the engine. Occasionally he shifted the lever and allowed the engine to tick over. To be just, it must be admitted that the engine appeared to be in perfect tune. He throttled it down until it just tickled over, then opened out to a lively, healthy roar. Somehow the noise did not seem half so bad when the machine was in sight. But why didn't the fellow try it on the road?

I stood in full view expecting him to speak, seeing that I could not be mistaken for anything but a motor cyclist. Such was my conceit that I felt piqued at his indifference, and prepared to move away. An indifferent unsociable sort of a bounder, thought I. Yet, why should he, at home in his own garden, turn to accost a perfect stranger? I should not. But a strange feeling compelled me to remain where I was, and at last he straddled the machine and dragged at the stand.

The engine was just ticking over as he paddled it down the miniature drive. I had just moved aside when a matron rushed from the house in apparent alarm.

"Dick!" she cried, hurrying after him. "What are you doing? You must be mad."

The boy smiled, and waved a reassuring hand. "Don't alarm yourself, mater," he laughed, "I'm only going to feel the road, just *feel* what it is like."

The lady in grey stood in the pathway, the picture of nervous apprehension, and watched the youth pass through the gateway.

The scene is fixed vividly in my mind, although at the time I had no notion of its significance. The grey lady, the little drive lined each side with green velvet and Mrs. Simkins pinks, the white-washed cottage in the background, and the indifferent youth.

He looked directly at me, but my presence created no more interest than a mere handcart would have done. Straddling the machine he let in the clutch and the machine moved a yard or two on low gear towards the hedge. Directly the wheel touched the grass he stopped the engine, and wheeled the machine back towards the gate. Curiously enough, the lady in grey did not show any surprise, but opened the gate for him to enter and helped him through. It was just after he had pushed the 'bus back on the drive that a thought occurred to me, and I strode to the gateway.

"Anything wrong?" I asked. "Perhaps I can give you a hand."

I was quite close to the lady in grey, but the response came quickly from the youth. He turned, and, with a flushed but smiling face, "It's all right—thanks, thanks."

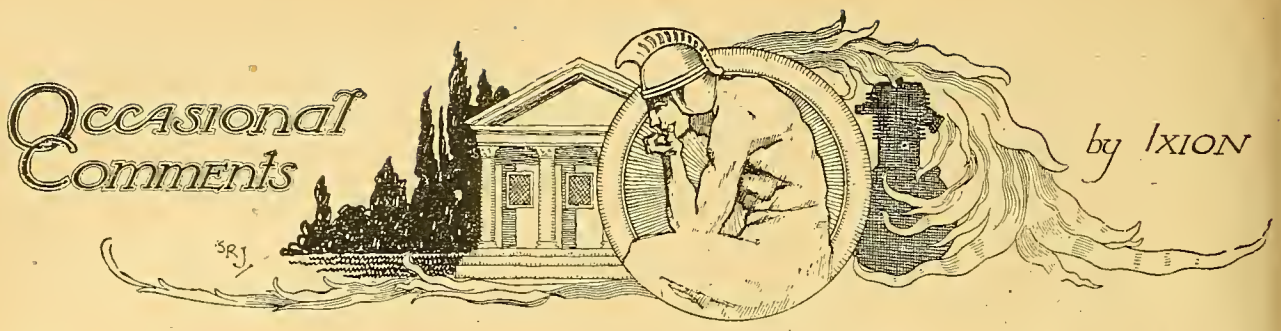
And as he moved away the lady turned to me.

"He'll never ride again," she said quietly.

There was a moment of silence, then she added with a break in her voice:

"He was blinded in France—no, he will never ride again, the doctor says so."

FRIAR JOHN.



## New Lighting Laws.

THE forecast—semi-official, doubtless—of the new lighting laws includes a return to sanity in respect of rear lights. But there is no mention whatsoever of a reform which has long struck me as most profoundly necessary. Anybody who has ever resided off the beaten track knows that the lighting laws are observed only in cities and towns. In the neighbourhood of Little Slushington very few people (excepting only motorists) pay any serious attention to the regulations. Just as a dog is theoretically allowed one free bite, so carters and cyclists are never prosecuted for the first offence against the lighting laws unless they happen to have a personal quarrel with the policeman involved; and feminine road users, especially if youthful and attractive, are permitted quite a number of "first" offences. Such misdemeanours are not very serious when committed by cyclists on lonely roads, for the rider generally has the sense to hop off and squeeze into the hedge at the approach of another vehicle. But heavy unlighted carts come in quite a different category. Agricultural people take out broad conveyances on narrow roads without lamps in the most light-hearted fashion if they know that the chance of their meeting a policeman is small. This offence is potentially far more serious that the vast majority of offences against the speed limit, but conviction seldom entails a fine of more than 5s. The new lights Bill will tempt all road users to depend more than ever on the lighting of other vehicles; indeed, it is doubtless designed to speed up, as well as to safeguard, our night traffic. In that case heavier penalties are needed against any persons importing serious danger into night traffic.

## Aluminium Pistons.

I STILL receive many rather timid enquiries about the reliability of aluminium pistons. If I had to sum up my personal experiences of them, reliability is an idea which would hardly occur to me, for they have never yet let me down. At the same time I should not recommend them broadcast, because their special advantage (a trifle of extra horse-power) is hardly needed by the average rider. They probably economise oil. They certainly get less gummy when cold than is the way of a tight-fitting cast-iron piston. Neither of these merits is enormously valuable. On the other hand, they still "slap" a little till the engine has warmed up, and in short-distance, multi-stop work the slap is an ever-present annoyance, albeit of a purely sentimental kind. Finally, they will give serious trouble under a degree of under-lubrication at which a cast-iron piston would probably smile; and the average duffer under-lubricates his engine for a few miles three or four times in a season. There is, therefore, nothing to be afraid of in an aluminium piston; on the other hand, as trade policies indicate, it is questionable whether they yet offer any very immense attraction to an owner of the pottering type. I must confess that I have not yet tested one on a low-powered outfit, which is slightly nervous about really fierce climbs or apt to run rather hot on a gruelling drive with the wind astern. Possibly their technical merits may be of great avail under such conditions. For me, the question of aluminium *v.* cast-iron resolves itself into a question of whether that extra 3 or 4 m.p.h. is worth the "cold slap" or not.

## Our Lost Simplicity.

YESTERDAY I was poised in dumb adoration before an ultra-modern outfit with instrument board, interchangeable wheels, spring frame, hood, screen, and several billion gadgets (note the diminutive, implying the presence of a cigar lighter, variable jet, mechanical oiler, and all the other small fry). My agile brain fled back at a tangent to A.D. 1902 or so, when I used to transport my particular packet of fair femininity in a forecar, scaling about 180lb. all on. It had a 76 × 80 mm. engine with automatic inlet, direct belt drive, accumulator ignition, 2in. Clincher tyres, and brakes consisting of a Bowden horseshoe astern, and two bands in front with the circumference of a florin apiece. Yet "Me and ma Gal" actually toured Devon in this outfit. What's more, my taste in gals ever inclined—like the Kaffirs, I believe—to plumpness. What's more, we never had any serious trouble with that outfit, though we reeled off 15,000 miles on it. Punctures were our one real foe, with belts in the background. Hills? Well, we dodged the worst ones; and the others we took in three charges: charge 1, "Ixion" and Miranda seated; charge 2, Miranda unloaded for a walk, "Ixion" descending and making a fresh rush; charge 3, "Ixion" and Miranda running alongside, with "Ixion" pushing and Miranda pretending to push.

Naturally, there is no real comparison between the 1922 super sidecar at 8cwt. and £225 and my own tricar at 180lb. and—was it £90? Still, I daresay there is still a market for the economy two-passenger motor cycle, and a few specifications like the Harper indicate that some designers have long memories.

**Occasional Comments.—**

## A Novelty in Dud Bulbs.

NOT hyacinths, of course; I refer to an electrical bulb. Our contributor "Road Rider" is a canny lad. As I perused his recent article on detecting faults in a lighting circuit, I thought I should catch him tripping, for that very week I had been mentally tortured by just such a circuit as he described, viz., with a head lamp and tail lamp wired in series. The symptoms were that my head lamp burnt brilliantly but my tail lamp remained as black as ink. Obviously, methinks—and even as "Road Rider" laid down—a short circuit along the wire connecting the head to the tail. The first snag was that I could find no sign of a short in the required position. The second snag was that when in desperation I inserted a spare bulb in the tail lamp, it immediately lit up. Still more surprising was the fact that close examination in a good light at home showed that the filament of the original tail lamp bulb was intact. I was driven to the conclusion that this bulb had developed an internal short across the insulation inside its socket. If this be so, it is the first time I have struck a bulb with this fault. But I get nothing back on "Road Rider," who had safeguarded his statements as cautiously as any politician; in "999 cases out of 1,000," quoth he, such symptoms indicate a short along the between-lamps wire.

## Live and Learn.

YE novices with a superficial smattering of electrical knowledge and a fair stock of assorted bulbs, try the experiment of inserting bulbs of assorted wattage and ohmage and candle-power and all the rest of it in the sockets of two lamps wired in series, and then watch the results. You will be endowed with enough matter to furnish unlearned argument over a week-end. Since I perforce experimented in this direction, I have been peculiarly careful to keep the correct bulb at hand for all my lamps.

## Was It In Malice?

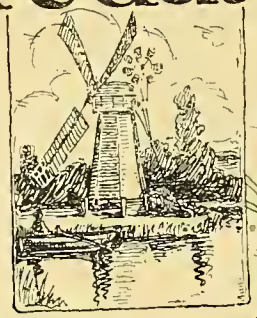
MR. K. D. MORGAN, of 27, Dartmouth Road, Chorlton-cum-Hardy (by the way, who or what was "Hardy"?), may be variously regarded as a philanthropist, or as a person with murderous designs against young England. He posted a small jeweller's box to my private address, and I tore open the box before I read the covering letter. Out fell a delightful little pocket knife, adorned with two spring knobs and two tiny levers. The eyes of the table were instantly fixed upon this attractive toy.

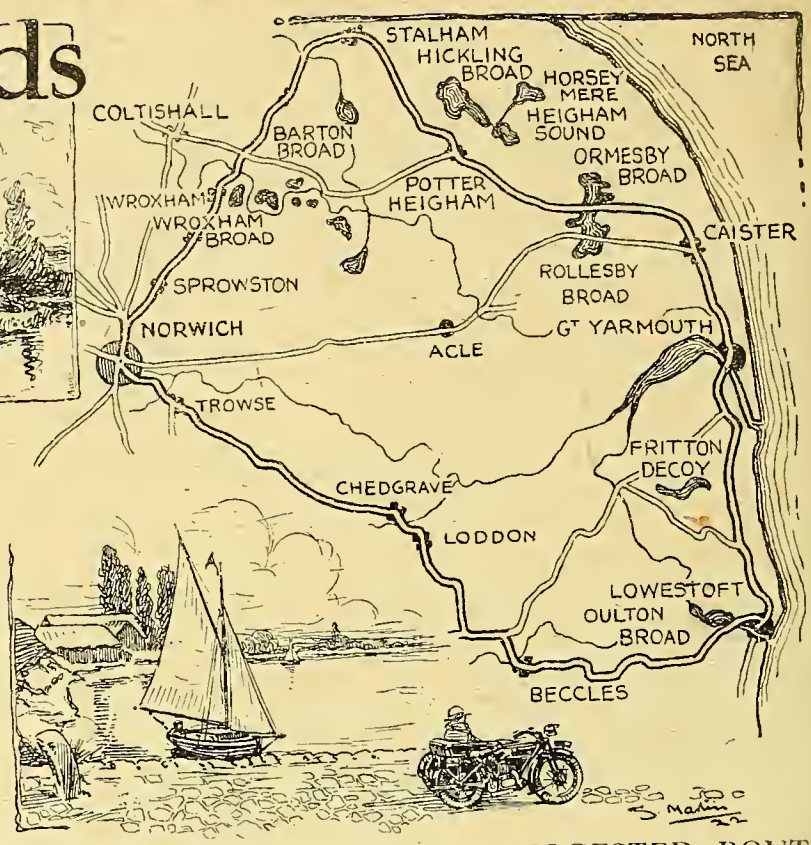
Then I read the letter. Mr. Morgan knows what it is to sit in a puddle and hold the two ends of a tense but disconnected belt together, what time he prays for a third hand to open his knife and saw off the unwanted inch of rubbered canvas. So he now markets this patent spring pocket knife. So far, so good. But as I laid the toy down beside my porridge plate, I espied an unholy glitter in the eyes of all the "Ixionettes." By hook or crook they intend to get hold of that knife; and they will infallibly guillotine their fat little fingers with it, bless 'em. So I am not quite sure that I regard Mr. Morgan gratefully. But from a purely motor cycle standpoint, his knife is, of course, just "it." Personally, I am more interested in bisecting chains than belts, but I shall retain the tool.

THE TRIAL FOR STOCK MACHINES. Scenes during the recent A.C.U. One Day Trial. (Left) B. Bladder (8 New Imperial sidecar) and Allen-Bennett (10 Grand Prix Morgan) rounding the hairpin bend on Chinnor Hill. (Right) G. H. Kirby (3½ Triumph) and J. T. Bashall (6 Martinsyde sidecar) nearing the top of Kop Hill, Princes Risborough.

# The Broads

## The "Lakes" of East Anglia; a District of Distinctive Beauty and Diverse Attractions.





A DISTRICT saturated with sunshine; a country of shimmering waterways, luscious foliage, and crooked roads which never reach to the place one wants to reach—so the Broads appear to many. At least they never lead to the particular Broad one can see in the distance and that, on a first visit, is somewhat of a grievance. Local advice, however, soon puts that matter right, and the banks of most of the Broads can usually be reached without much difficulty.

### For the Leisurely Tourist.

If you are a motor cyclist whose sole ambition is mile-eating, and who detests stopping for a pipe here and there; who thinks nothing of punting, sculling, "houseboating," fishing, sailing, there are places where you might be happier. The Broads is a district where one can laze to the heart's content, and in some of the villages there are men—men, be it observed—who could give a beachcomber points in the gentle art of existing with the minimum amount of exertion.

Whether it is the motor cyclist's intention of spending a lazy fortnight or so in this district, or simply to pass along and be satisfied with a general impression, East Anglia offers everything he wants except hills. The roads are on the whole excellent; sinuous, true, in many districts, as are all the by-roads from the Humber to the Ouse, but one is not bothered by charabancs.

A glance at the accompanying map will show how easy the Broads can be surveyed. One can make it a week-end run from town, or embrace the district in a more comprehensive tour, say of Eastern England. Although definite directions have been given for motor cyclists who like riding to a pre-determined route, probably the most interesting way is to wander just where fancy takes one, staying overnight at some of the small inland hotels or at the seaside, which is only an hour or two's run from the farthest Broad.

### The Sportsman.

The fisherman will find roach, bream, rudd, perch, and pike plentiful—the latter running up to 30lb.—and the cost of angling is insignificant. Yachting can be had at all prices, and the motor cyclist interested in the hire of a wherry for a party will get all the information on this subject from the Norfolk and Suffolk Broads Yacht-owners' Association. What finer fortnight's holiday for a party of four than the run down to Breydon Water, Barton, Wroxham, or Oulton Broads, spend a week or so in a houseboat (which can be hired cheaply), a day or two motor cycling round East Anglia, and finish up with a short time at Lowestoft, Hunstanton, or Cromer. One would indeed get the fullest benefit out of the treasured fortnight's holiday. Such an itinerary is easy to arrange, and what is more, the consideration of h.p. of the machine does not matter in the least, for the oldest of crocks or smallest of engines will accomplish a tour in this delightful district which should really be much better known to motor cyclists than it is at the present time.

## A SUGGESTED ROUTE.

NORWICH is the most convenient place from which to start a round tour of the Broads, besides being an interesting city where excellent accommodation can be found.

A circular route embracing most of the well-known yachting and fishing districts, avoiding as much as possible the most winding roads, is given below.

**NORWICH — GREAT YARMOUTH (via STALHAM) 32 miles.**

Norwich, New Catton, Rackenheath, Salhouse, Haverton (*Broads near*), Wroxham 7¼ (*Wroxham Broad*), Stalham, Catfield (*Hickling Broad and Heigham Sound near*), Potter Heigham, Rollesby, pass Ormesby Broad and Rollesby Broad on to Caister, Great Yarmouth—32¼ miles.

**YARMOUTH to NORWICH by LOWESTOFT—37 miles.**

Gorleston, Hopton (*Fritton Lake on right*), Lowestoft (*Oulton Broads near*), Beccles (*very picturesque*), Stockton Inn, Loddon, Trowse, Norwich—37¼ miles.

**DISTANCES OF THE BIG TOWNS FROM NORWICH.**

| | miles. |
|---|---|
| From London to Norwich ... | 119½ |
| ,, Southampton to Norwich | 189 |
| ,, Bristol to Norwich ... | 216½ |

# ROAD TESTS of NEW MODELS

The 2¾ h.p. Raleigh.

*SPECIFICATION.*

*ENGINE: Raleigh; single cylinder, side-by-side valves, outside flywheel. 71 × 88 mm. (348 c.c.)*
*GEAR BOX: Sturmey-Archer, three speed, kick-start and hand clutch.*
*TRANSMISSION: Enclosed chain and final belt.*
*BRAKES: V type on belt drum; dummy drum on front wheel.*
*TYRES: 26in. × 2⅜in.*
*FRAME: Rigid; Brampton forks.*
*WEIGHT: 198lb.*
*PRICE: £68.*

IN looking back over the years one now sees that in 1911, say, it would have been a very safe prediction to have anticipated a great future for the sound, sturdy, and well-made 3½ h.p. single-cylinder, which was then really coming into its own.

That we are on the eve of another similar epoch is felt by most of those who are in close sympathy with the motor cycle movement. To-day, however, the decade on which we are opening will assuredly be the decade of the 2¾ h.p. single.

Typical 3½ h.p. machines have outgrown themselves and developed into heavy mounts far more suitable for sidecar work than for even merely occasional solo riding. True a sports type of "3½" has developed, but it is the result of the demerits of its overgrown parent, and for the average rider it remains a type that novices still regard as being too weighty, too fast, and too powerful.

### The Ideal Solo Size.

A machine for the man who invariably rides solo, yet who yearns not habitually for the joys of freak hill conquering nor for the thrill of ultimate speed, need have no greater cylinder capacity than 350 c.c. Such an engine will give all reasonable speed, may indeed give more speed than many roadster 4 h.p. models, will climb any reasonable hills, and most unreasonable ones, and, finally, will provide *occasional* transport for two, either by pillion or by sidecar. Just as the 4 h.p. has become a passenger model used for occasional solo work, so has the 2¾ h.p. single stepped up to take the vacated place as the ideal solo mount which at the same time is quite suitable for occasional passenger work.

For pillion riders the lightweight Raleigh provides efficient transport for two. On country rambling expeditions it is an extremely handy mount, for when a stop is made it can be dropped on its footrest without fear of overbalancing.

### From the General to the Particular.

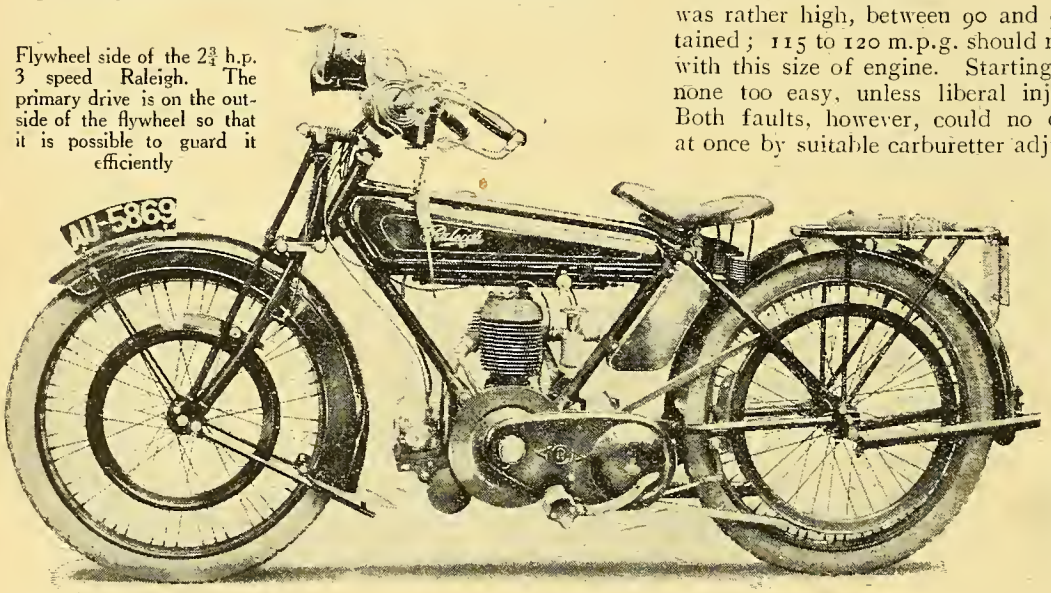
That the foregoing thoughts were inspired by the use we recently enjoyed of a 2¾ h.p. three-speed Raleigh may be taken as greater commendation of the machine than anything we might say of the actual machine's performance under this, that, or the other circumstance.

**Road Tests of New Models.—**

Handed over to us almost immediately after the A.C.U. stock machine trial, the machine under review was in the condition in which it finished that event wherein it gained a special certificate of merit as a standard stock machine. Without any chance to become familiar with it, it was driven straight into the densest London traffic, and subsequently used for running in and out to business and a week-end's pottering, as well as subjected to tests on rough surfaces and hills. In all respects it gave good results such as one would expect from a machine bearing the distinguished name it carries and finished so handsomely as it appears to be.

### With a Pillion Passenger.

Ridden solo the machine's performance on ordinary hills was such that no use of the gears was called for on Surrey main roads, but departures into by-tracks occasionally demanded second, and on one occasion even produced knocking on that ratio, which caused a further drop to low; this, however, was due to a combination of mishandling and very low speed. A pillion passenger's extra weight on one jaunt proved that the machine was not appreciably slowed on hills by the double load, but, of course, the ability to climb hills slowly on top gear was reduced.



Flywheel side of the 2¾ h.p. 3 speed Raleigh. The primary drive is on the outside of the flywheel so that it is possible to guard it efficiently

### Smooth and Quiet Running.

Owing largely, no doubt, to its outside flywheel, the 2¾ h.p. Raleigh engine pulls exceptionally well at low speeds and in moderate traffic; its top gear of 5½ to 1 (roughly measured) is all that is needed in conjunction with the lightly-operated clutch. In very dense traffic middle gear was advisable and a smooth restart, even on gradients, could be made. Low gear was found to be too low for convenient handling of the machine in traffic on level roads, and should never be needed except on single figure hills.

Maximum speed is not abnormal, but it has a useful pace, and at 38-40 m.p.h. engine vibration is not unpleasantly discernible. Riding position (and steering) is excellent, and both feet may remain firmly on the rests, even when the heel-brake pedal is in use on the near-side. The top gear position of the gear-control lever is rather out of reach, and might be higher with advantage.

On the actual machine we tested petrol consumption was rather high, between 90 and 95 m.p.g. being obtained; 115 to 120 m.p.g. should normally be obtained with this size of engine. Starting from cold was also none too easy, unless liberal injections were made. Both faults, however, could no doubt be eradicated at once by suitable carburetter adjustments.

To sum up in a sentence, we consider that the 2¾ h.p. Raleigh, without being superlative in any one direction, combines as many sound and workmanlike qualities as one would wish to find in a mount; withal the value for money is good, for it is sold at a competitive price.

## THE GRAND PRIX OF FRANCE.

IN our issue of the 16th inst. we referred to the Grand Prix, mentioning that the date officially decided for this important Continental fixture, was July 12th. Preliminary particulars, views of Strasbourg, and a map of the course appeared in *The Motor Cycle* of February 9th, p. 196.

### 500 c.c. the Capacity Limit.

We have now received an official communication from the organisers, the Union Motocycliste de France, the national body controlling the sport of motor cycling in France, which informs us that the race will be open to motor cycles of 250 c.c., 350 c.c., and 500 c.c., and of these the smallest machines must make 20 laps of the 8⅛ mile circuit, making a total of approximately 162½ miles, the 350 c.c. machines 25 laps, a distance of approximately 208⅜ miles, while the 500 c.c. machines will cover 30 laps, approximately 243¾ miles.

Entry fees cost £4 6s. 8d. English money, and must be sent to the secretary of the A.C.U., 83, Pall Mall, London, S.W.1. Entries close at ordinary fees on May 15th, and at double fees between May 15th and June 15th.

The Grand Prix of the U.M.F., usually known as *the* Grand Prix, to distinguish it from other events bearing the same title though of less importance, is the blue riband speed event on the Continent.

# SIDECARS FOR MOTOR BUS INSPECTORS.

## A Novel Service Instituted for the Purpose of Checking on Country Bus Routes.

The Bristol Tramways & Carriage Co.'s fleet of sidecar-mounted bus inspectors. Five B.S.A. machines are shown, the sixth being in process of overhaul. Observe that all the sidecars are fitted with Easting screens.

MOTOR cyclists, generally, have only one attitude towards the motor omnibus—they dislike it; but, despite its roadbreaking tendency and bulkiness, it is undoubtedly of the greatest service to the inhabitants of districts hitherto untouched by any form of passenger transport, and therefore to be considered as a very important item in road travel.

Those who can put aside any prejudice and consider the traffic from a commercial standpoint will soon realise that one of the problems, and by no means a minor one, is how best to keep a definite check on the running times, fares, and general conduct of the staff when the vehicles are out on many different routes miles away from their depots. It is not that the company suspects its staff of dishonesty or irregularity—that usually brings its own reward very quickly, but there must be a constant organised supervision to keep the whole service working sweetly. Timetables in particular must be adhered to or a bad name results.

### Mobile Motor Cyclist Inspectors.

The ordinary inspection by officials who board the bus, ride with it for a while, leave it to board another in the opposite direction, with frequent long waits, must mean a deal of waste time, and the duties of such men being known, there is always the loophole for irregularities when they have been passed.

The reader may be forgiven for thinking that so far this article appears more suitable for the pages of our sister journal *Motor Transport*, but here comes the point of interest to motor cyclists.

The Bristol Tramways and Carriage Co., Ltd., one of the largest companies in the motor coach world, has solved the problem by the use of the sidecar outfit. A special staff is kept for the duty of, what amounts to, secret checking on its extensive series of routes in the West of England.

This staff is equipped with 6-7 h.p. B.S.A. sidecar outfits, absolutely to catalogue specification.

The magnitude of the task may be gathered from the following figures:

The company has a fleet of 150 motor buses working.

There are 50 separate routes.

The total length of all routes worked is 700 miles.

The area covered from Bristol as a centre includes Bridgwater (32 miles), Cheltenham (42 miles), and Swindon (50 miles).

There are six outfits in use, and their weekly travel varies round about 700 miles. Duties are regular and constant, that is to say, except for periodical overhaul the machines are in constant daily use; thus we have the interesting fact that six British-made big twin outfits have reeled off nearly 5,000 miles per week since the fall of last year, doing all that was asked of them efficiently and satisfactorily in every way. And, further, at the present time they appear to be in such good condition that one might suppose they had just completed their first 1,000 miles.

It should be noted that they run very little on main roads; when a bus has been checked according to the schedule for the day the next check may be on another route, say at a point ten miles away, only reached by narrow lanes. Quite 75% of their work is on cross-country jaunts over second and third-class roads; thus the mileage standing to the credit of these outfits is of a more arduous nature than ordinary main road travel.

### The Working System.

This company is noted for its method in management, and the daily routine mapped out for the sidecar check department is unusually well thought out. As in a certain degree this work is secret, it is not advis-

**Sidecars for Motor Bus Inspectors.—**

able to give definite details, but generally the duties are arranged in two shifts, three inspectors going on from 6 a.m. to about 2 p.m., and the other three from 2 p.m. until 8 or 10 p.m.

On reporting for duty the managing officer hands each a leather wallet containing typed instructions for the day together with a half-inch scale map or maps to cover the district. The checks are arranged to allow a reasonable time for travelling between points, and on arriving at a check point a short waiting period may be necessary; the inspector boards the bus and the sidecar follows up until the inspector is ready to transfer to the sidecar again, when they turn away to the next point. Herein lies the reason for the use of sidecar outfits as against mounting the inspector on a solo machine; obviously the latter would mean much greater economy, but it would necessitate a bus stopping whilst the check was taken; this would take some time where there are twenty or so sets of tickets to examine, as is the case on some routes.

### No Fixed Routine.

The daily schedules are made out afresh for each day, there is no regular sequence of checks and the districts touched are very varied. An inspector may start out south of the city, go west, then east, and, working round to the north, may finish his duty on the opposite side of the town, having travelled in three counties—Somerset, Wilts and Gloucester; also the number of checks taken on one run vary from, say, ten to thirty or more.

### Incidental Usefulness.

Another side to the activities of this staff is that each carries a box of spares for the "Bristol" bus, in addition to its own motor cycle spares; the bus spares include such items as a contact breaker, valves, springs, etc., electric light bulbs, and a number of other useful parts. No spares are carried on the buses; since it is clear that with over 100 buses in commission, to supply each with a set of parts would mean a large outlay on spares which would be floating around deteriorating, with constant waste.

Efficient repair breakdown gangs are sent out if required, but frequently an inspector can be diverted to a stranded coach, and, being a skilled driver and mechanic can render mechanical first aid.

### How the Mounts Behave.

The behaviour of these big twin outfits has been remarkably good; no serious trouble has been experienced, a few instances of broken balls in the back hubs being the chief failure.

Petrol consumption is 55 m.p.g., which, having regard to the varied character of the work, may be considered excellent.

Oil consumption works out from 700 to 1,000 m.p.g., a reasonable result with a powerful twin cylinder sidecar machine.

The Bristol Tramways and Carriage Co. are to be congratulated upon the successs of a most interesting experiment and the formation of a new commercial sphere for the motor cycle.

WESTERNER.

# ON THE HILLS OF THE WEST.

## Impressions of Three Famous Gradients in Somerset and Devon. Inclusion of Beggar's Roost in the Land's End Run at Eastertide.

WITH the annual advent of the M.C.C. London-Land's End Trial attention is re-directed to the so-called "Devonshire terrors," Porlock and Lynton—so-called at any rate is the first-named, for it is well inside the Somerset boundary.

In the last Land's End run a 20 m.p.h. average was demanded from Porlock village to the summit of Lynton Hill, a requirement which called for unseemly speeds on the narrow moorland roads and on the dangerous descent of Countisbury, in order to regain the time lost in climbing Porlock and Lynton. This year, however, the climbing of these hills will be separately timed as a means of differentiating the performances of the competitors without putting a premium on recklessness between the two points.

### Speed Requirements on Porlock.

Solo machines of above 350 c.c. capacity will be required to average 18 m.p.h. up the first mile of Porlock. The speed for solo lightweights and big sidecars is 15 m.p.h.; for 500 c.c. sidecars 12 m.p.h., and 1,100 c.c. cycle cars 15 m.p.h. As the hill is now in excellent condition as regards surface, the solo men should experience no trouble whatever, but the dead load to be lifted up the long gradient will tax the smaller sidecars fairly severely, not to mention some of the bigger outfits and the cycle cars. Unless very heavy rains immediately precede the run, wheel slip should not cause any failures on Porlock.

The timed section on Porlock is the first mile, which covers the worst gradient, measuring from the Ship Inn in the village at the foot.

### Lynton in Poor Condition.

Between Porlock and Lynmouth much road improvement has been effected, but this notwithstanding, the road is in a shocking state. The descent of Countisbury has been rendered safer by widening the road and easing the bend near the foot, but the new surface is composed of loose metal, which will slide if wheels are locked by down-coming drivers.

Lynton Hill is in its usual state, having a narrow and firm path on the right-hand side, the middle and left being a mass of earth and stones. Wheel slip will be the deterrent feature here, and woe to the machine which cannot keep its driving wheel on that narrow right-hand strip. Three- and four-wheeled cycle cars will be at a disadvantage on Lynton.

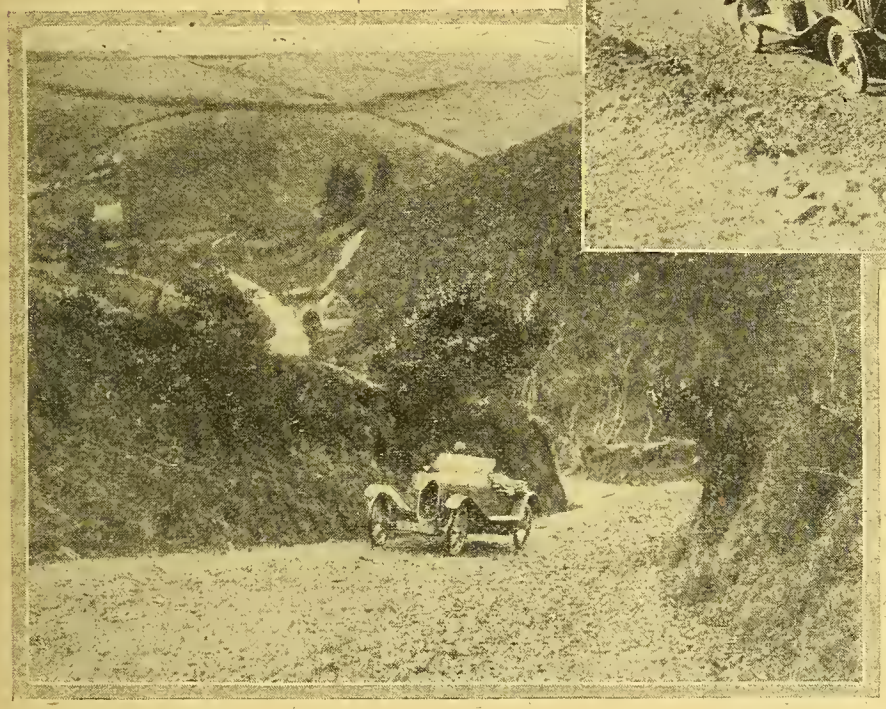
### Will Beggar's Roost be Included?

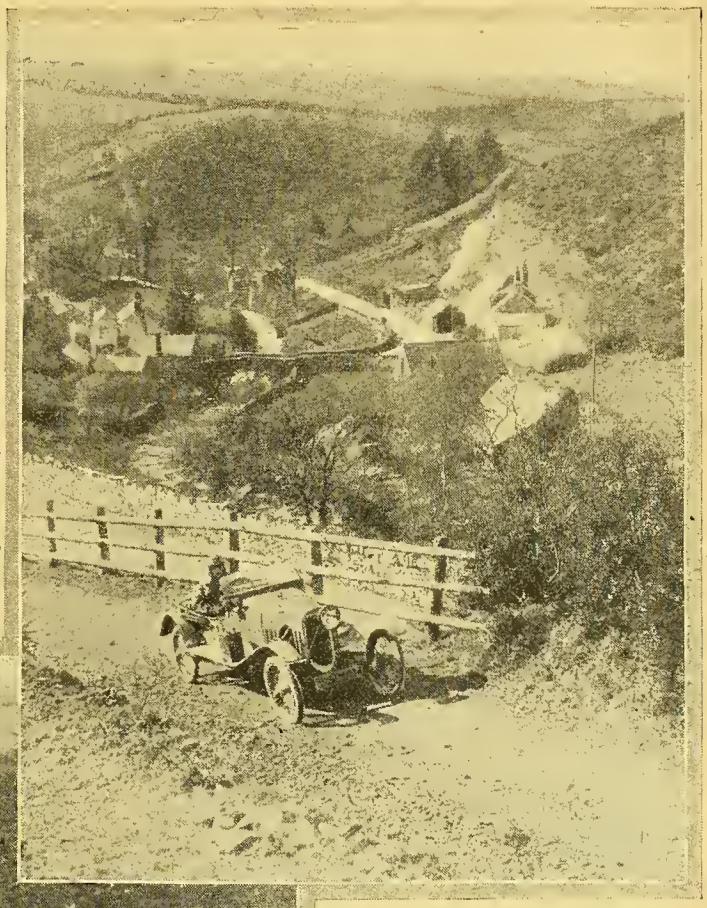
Officially, no one is supposed to know the hill to be included in the Land's End run after Lynton, but

**On the Hills of the West.—**

*The Autocar* definitely announces that Beggar's Roost has been selected. This hill is merely a steep winding lane, now generally neglected since the excellently-engineered avoiding road was constructed; it rises almost immediately from the village of Barbrook, less than a couple of miles from Lynton, and the approach from the village permits a rush at the lower slopes, which are the worst. The hill is about half-a-mile in length, and has a maximum gradient of 3 in 10, according to the A.A. notice at the top. When surveyed for *The Motor Cycle* some years ago it was 1 in 3.6, which is much the same.

Speaking generally, the surface is better than that of Lynton, albeit somewhat similar; there is a smooth, right-hand path and a loose section on the left. After heavy rain, however, there is a continuous flow of surface water down the hill which renders wheel slip inevitable unless chains are fitted. If the first three hundred yards can be surmounted, however, the rest of the hill, although steep, is comparatively easy. Having





TWO VIEWS ON BEGGAR'S ROOST. On the right is the first portion almost parallel with the main road (Barbrook village in the distance). The left-hand photograph was taken on the worst portion (1 in 3·6 gradient) where the surface is rough and loose except on the extreme right of the road. A powerful machine can get up to this point "on the rush," but, if the surface is at all wet, wheel slip is almost inevitable. The bad gradient continues for about 50 yards above this point, and thereafter the hill becomes an easy climb.

no bad hairpin in its approach, as is the case at Lynton, Beggar's Roost is actually an easier ascent, and if the writer were out to see the fun in the Land's End run he would certainly take his stand just about the bend of the former.

### State of the Devonshire Roads.

After the competitors leave the summit of Beggar's Roost behind them, their difficulties will be by no means at an end. Supposing that their course then leads them to Simonsbath, the road surfaces encountered are wicked in the extreme. Almost immediately after the top of the hill is a fairly severe descent with a clayey surface and a bad hairpin; within a couple of miles is an extremely dangerous bridge where the road doubles back at the other side of the stream, and thereafter is a long, winding gradient to the upper levels of Exmoor. The road over the moors is in a very poor state, and deteriorates as Simonsbath is neared. Under adverse weather conditions the crossing of Exmoor is a miserable journey, especially if one is pressed for time; without shelter the undulating road when swept with rain borne by the unfettered wind can produce untold discomfort.

The Editor does not hold himself responsible for the opinions of his correspondents.

**Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address.**

### *RAIL CHARGES FOR MOTOR CYCLES.*

Sir,—Surely the time has come to make an effort to obtain a better classification of rail charge on motor cycles.

A 2¼ h.p. cycle is in the same class as an 8 h.p. machine.

What are the views of lightweight owners on this subject?

WORTHING.

### *WHICH SIDE DO YOU FALL ON?*

Sir,—I quite agree with Mr. Leslie Lyons when he states that in nine cases out of every ten a tumble or sideslip results in the machine being damaged on the near side.

I myself can call to mind three instances at least where I have had a fall. The first was while taking a right-hand bend at speed. I skidded in about three inches of sand, tumbled over on to the offside footrest, righted the machine, and then came off on the left-hand side. The second occasion was while trying to avoid a child running from an entry; then also I found myself lying on the near side of my machine after skidding on the wet tram lines.

The third was similar to the second, and each time my left-hand footrest has told the tale by either being bent or beyond adjustment.

DIAVILLE.

Wolverhampton.

### *IS THERE AN AGE LIMIT?*

Sir,—Perhaps the opinion of one who is near Mr. Palmer's age—*i.e.*, 56—and "still going strong" may be of use.

I have been a motor cyclist for about twelve years—with a gap of three years during the war—and have had various makes of machines. I can emphatically say that 56 at least is not too old. For an "elderly" person, or one not very robust, I think the whole matter is summed up in one item, and that is: *Easy starting from cold*—easy starting first, last, and always. The only possible exhausting thing about the premier pastime is starting a cold engine, and that must be guarded against when purchasing and by ordinary care of the engine afterwards. Assuming that a modern machine of good make is obtained, and that by preference a single-cylinder, I do not see anything to prevent Mr. Palmer enjoying motor cycling for another ten years at least.

F. J. HASWELL.

Sir,—I am 60 years of age. My wife and I have travelled over 3,000 miles with a motor cycle and sidecar during the last twelve months.

It all depends upon: (1) Physical fitness; (2) type of machine; (3) road sense

I began my cycling career on a boneshaker in 1879. I have ridden almost every make of safety bicycle and innumerable tricycles, and spend all my holidays on the open road.

I should recommend Mr. Palmer to get a Scott and sidecar. He will then get easy running, smoothness and freedom from vibration.

Bridgnorth. VERITAS.

Sir,—From my own experience I strongly advise Mr. R. E. Palmer to harden his heart, take the plunge, and invest in a reliable family bus.

I am well on the wrong side of 60, and pretty well crocked at that, but my wife and I get wonderful pleasure out of our outfit, a 6 h.p. Royal Enfield. I also find that driving is a splendid cure for insomnia, and a general refresher all round.

Of course I do not indulge in speed bursts, anything from 10 to 15 m.p.h. on "so, so" roads and 20 to 25 on good roads. We always take lunch and tea with us; any beauty spot about lunch time makes an excellent dining-room; a laze and a smoke and then on to a tea-time nature haven; another rest, and then to one's destination. Travelling thus, one can take in all the beauties of the open road, and it is wonderful the distance that can be traversed without any sense of tiredness other than a comfortable desire for bed when the proper time comes. Long tours are quite simple if carried out on these lines and no attempt is made to do too great mileage in any one day.

Breakdowns on the road are very rare with a good machine nowadays, but should they unfortunately occur I have always received unvarying courtesy and help from the "brethren of the road," whether they be cyclists or the tradesmen's vans one meets so continually these days. Should Mr. Palmer care to write to me, c/o the Editor, I shall be very pleased to answer any questions that may occur to him.

Tunbridge Wells. T.A.C.

### *VALVE BOUNCE MADE VISIBLE.*

Sir,—I am very much interested in this matter, and appreciate the view of Mr. Denne as to the use of a device with rotary shutter, arranged on a stand with a form of telescopic observation tube; as a matter of fact, this form of device has been on paper for a considerable time, and but for the fact that my time has been taken up in other directions, would possibly have been introduced at the end of last year.

As it would appear that Mr. Denne has already given that matter some consideration, it would be interesting to know if any instrument has been made on these lines, and if so what difficulties, if any, were experienced in maintaining complete synchronisation, or the required percentage reduced or increased speed.

It would appear that for high-speed work the use of an independent drive would render it impossible to examine a phase of movement with any accuracy.

A great deal of work in this direction has been done, but in most cases the apparatus is of a complex nature, and any remarks tending to render the device more simple and portable would be very welcome.

Possibly some of your readers with experience of the stroboscopic or oscilloscope methods will give their views.

C. E. NOEL-STORR.

Sir,—Mr. R. A. Denne is obviously interested in stroboscopic devices. I would like to take this opportunity of supplying him with a very little gratuitous information on the subject.

*Firstly*, on a purely technical point the 101% ratio recommended by the letter would enable the observer to see the valve gear actuating *backwards*, which is not the desired result.

*Secondly*, I have proved on practical considerations, through bitter personal experience in years gone by, that the shutter method is very far from being a practical one for even moderately accurate results, both for technical and practical reasons.

The technical reasons for its actual impracticability as determined experimentally are due to the following considerations:

(1.) It is impossible to get clear definition in practice because of (*a*) halation effects of holes in rotating shutters; (*b*) the angle, the diameter of the hole in the rotating disc subtends at the centre of that disc, necessary to give sufficient illumination at high speeds, is too great to give good "persistence of image" at low speeds, the one being the converse of the other.

(2.) Flexible drives are completely out of the question due to periodic cyclic hunting in the sense of angular displacement within the flexible shaft itself. This nasty effect entirely precludes even moderately accurate results.

(3.) The electric motor method also suffers from the same defects, because it is impossible to prevent relative hunting between the electric motor and the engine under examination, due to cyclic aberrations in both the engine and the electric motor in actual practice, and the oscilloscope is *primarily* a practical instrument.

I should very much like to invite Mr. Denne to a demonstration of the oscilloscope either in London or, if he happens to be in the Manchester district during the first few weeks of April, he will find the oscilloscope being demonstrated at the Manchester School of Technology from March 27th till just about Easter.

A. J. H. ELVERSON.
Oscilloscope Syndicate.

### *ANTI-FOGGING OINTMENT.*

Sir,—In reply to Mr. A. T. Perrit's inquiry for an anti-fogging paste for glasses, I would suggest that he need not go to such an expense as to buy patent pastes. I have for some time been in the habit of anointing mine with clear apple-juice applied with a soft cloth, which does not leave fibres behind on the glass. This prevents, to some extent, the annoying fog which hides the road—and frequently the hedge!

Melton. LUNETTE.

### *"DUAL-PURPOSE BLIGHT" AND GEAR-CHANGE TROUBLES.*

Sir,—Disregarding "Lineshooter's" remarks on the "dual-purpose blight," which, of course, were really unnecessary and quite out of place, since the Rover Company supply a T.T. machine for purely solo riding, and it is obvious to the youngest of your readers that a dual-purpose machine cannot possibly ideally satisfy both uses, his remarks concerning gear changing difficulties are common to every dry clutch gear box, the correct manipulation of which is purely a matter of personal efficiency.

His advice concerning the correct procedure of changing gear does not seem to be sound practice. No experienced rider who drives his own machine would deviate from the correct method of changing gear, *i.e.*, to declutch.

J. ADAM HILGER.

### *ON LUBRICATORS AND GREASERS (IF FITTED).*

Sir,—On the average 'bus, 2-stroke or otherwise, for which a "fat" price has been paid, one finds that the lubricators and greasers (if fitted) are often totally inadequate in size, and are awkwardly placed.

When are we going to have large, adequate lubricators fitted? It does not encourage one to take care of the machine by oiling it. BULL-DOG.

London, S.W.19.

### *GRINDING THE PISTON.*

Sir,—Whilst riding a 1913 2¾ h.p. Douglas I noticed a peculiar knock coming from the engine. As the machine was badly in need of decarbonisation, and retarding the spark cured this complaint, I thought nothing of it. As I was climbing a fairly steep hill about a quarter of a mile from home, there was a noise like a jazz band from the engine, which ceased suddenly, leaving only one cylinder firing. I decided to run home on one cylinder, and investigate the trouble there.

I found the front cylinder was the culprit, and having in vain examined all exterior causes of defects, I removed the cylinder. Imagine my surprise when I found that a perfectly circular hole about 2in. in diameter had been punched in the head of the piston, the fragments being ground to powder in the crank case. The extraordinary part of the whole proceedings was the fact that, barring, of course, the piston, not the slightest damage was done to the engine, a new piston being the sole item of my repair bill. Considering the fact that I rode about 400 yards with the engine in this condition I consider it marvellous that no more damage was done.

London. DOUGLAS.

### *HIGH TENSION OVERALLS!*

Sir,—My overalls, being ex-W.D. stock, are distinctly "haggy," and at times touch the plug. Thus, when they are thoroughly soaked with water, a circuit is formed along the overalls, through my hands on to the handle-bars giving an unpleasant shock.

Have any of your readers been troubled in the same way?

SIVEL.

### *REAR LIGHTS FOR ALL.*

Sir,—Your leader strikes the right note. As a driver of cars, motor cycles, and also as one who occasionally rides a pedal cycle, I am convinced that rear lights are absolutely necessary. On my "push bike" one lamp set low down on the front fork spindle, with red glass reflector back, answers the purpose well. The small Lucas motor cycle rear lamp is reliable, and rear lamps on all vehicles should be compulsory.

Birmingham. F. C. C.

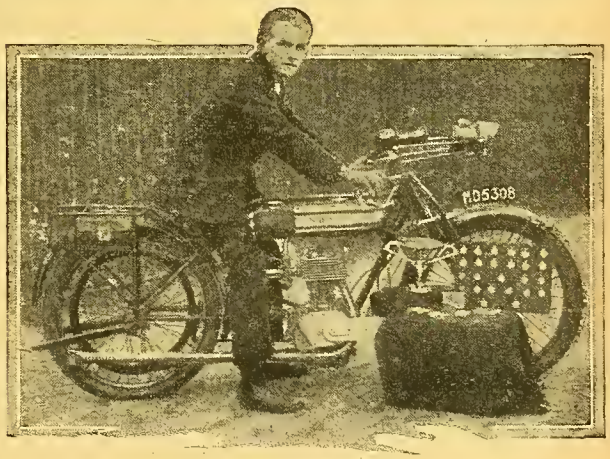
Sir,—The driver of an overtaking vehicle who is unable to see a motor cycle or the light thrown on the road by the motor cycle's headlamp is a danger on the public road, and, in my opinion, should not be allowed to drive.

In this part of the country (the Highlands of Scotland) he would invariably drive into a stray horse, or cow, or a herd of cattle being driven by men not carrying a light in front, or behind, and so become a constant danger.

ANGUS MACDONALD.

Sir,—Might I suggest that the fitting of "red reflectors" to both cycles and motor cycles would be a good solution to this obviously important question.

These reflectors are both cheap and efficient. Once fitted there is no further bother or expense. Very little light is required to obtain a really good reflection. E. C. BROOKS.



A SUCCESSFUL TRIALS COMPETITOR. A young club enthusiast, F. A. Medcalf, of the Colchester and District M.C., is on the road to success in the big motor cycle events. During the past eighteen months Medcalf has been awarded a challenge cup, fourteen firsts and twelve seconds in various club events.

Sir,—I quite appreciate your point of view as regards rear lamps on motor and pedal cycles, but from the soloist's and "pedal cyclist's" point of view there is the continual anxiety as to whether their ruby light is out or not. In the case of a motor cycle the head lamp shows up sufficiently from behind, while anyone riding a push-bike is able to hear motor or other traffic coming, and is enabled to pull in to the side. It is surely no more dangerous for a fast car to overtake a cycle than overtake foot passengers, as it will be noticed that there is hardly ever a footpath in the country, therefore pedestrians are compelled to use the road, and they do not even carry head lamps.

Westcliff. SOLOIST.

Sir,—I can picture Mr. Frank R. Ware, hon. secretary of the Gloucester M.C. and L.C.C., projecting his tongue playfully into his cheek as he composed that delicious passage in his most recent letter: "As motorists we belong to a large body, and we should endeavour to obtain 'the greatest good for the greatest number,' which often means the sinking of self. We should be ready, and willing, to suffer a little inconvenience, if, by so doing, the community may be benefited."

I should like to know who are the "community" whom I shall benefit by carrying a rear lamp on my Baby Triumph. I can imagine, with difficulty, the example of a private car owner whose electrical equipment has failed, and who, while compelled to use his emergency oil lamps, finds it imperative to maintain a speed of, say, 40 m.p.h. for the purpose of fetching a doctor to attend an urgent case. Such a driver, perhaps, is the "community" alluded to, but even he ought to see the flood of light from my Lucas acetylene head lamp, visible across the full width of the road and on both hedges. If he cannot see that how is he to see a red light?

The fact is, as Mr. Ware discloses in the latter part of his letter, we motor-cyclists are being used as tools in the campaign to compel pedal cyclists to carry rear lamps. We are being asked, "in common fairness," to do something that is absolutely unnecessary merely in order to assist a movement aimed at another class of road users; and I think it is time to protest. What benefit will the motor cycling "community" gain by having another crime (that of the rear lamp accidentally going out) added to the catalogue of offences for which they may be fined?

(Mrs.) MARGARET M. STANCER.

[Several readers have written pointing out that Mrs. Stancer is the wife of the secretary of the Cyclists' Touring Club, a body notorious for its persistent opposition towards the red rear light.—ED.]

Sir,—I quite agree with Mrs. Margaret M. Stancer regarding rear lights. There has not yet been made an absolutely reliable rear lamp, and, before the war, these useless articles were never dreamt of; so why worry about them now?

LIONEL E. B. WARRILOW.

### *STEERING BALANCE.*

Sir,—I notice in "J E. G.'s" letter that he attributes the good steering of his old Triumph to lack of head rake. I should like to suggest that trail, and not rake, has more bearing on the matter. The modern 3 h.p. A.B.C. has as much head rake as any machine on the market, except perhaps the 5 h.p Zenith, but I can guarantee to ride any specimen of this machine standing erect on the footboards with my hands above my head. On my own A.B.C. I can do this with a passenger on the carrier. I do not think I have ever ridden, nor am I likely to ride, a more stable machine. JO-5.

Chatham.

### *MOTOR CYCLES FOR BOYS AND GIRLS.*

Sir,—As the frequent rider of my father's two-stroke, I entirely agree with the article by Lieut.-Col. Brereton.

"XH-3296" in his letter says that "the average boy of fourteen wants speed, and knows no limit." In reply to this, I may say that I know a fair number of fifteen-year-old riders—seven to be exact—and their mounts range from an Enfield two-stroke to a 7-9 h.p. Indian, but none of them ride solely for speed, and only one could be called an irresponsible daredevil.

I think "XH-3296" and "Middle-age" both write in rather a narrow-minded strain: after all, how many of the accidents of which one reads are caused by the boys to whom they seem to have such a great dislike?

Weston-super-Mare. JUNIOR TWO-STROKE.

Sir,—Here in Switzerland one is not allowed to drive cars and motor cycles when under 18, and even when under 21 one must have a written permission from one's parents. I think this limit could be brought down to 16, as there is an official test to pass before the licence is delivered. Motor cycling is one of the healthiest sports for young boys.

Zurich. 677.A.

Sir,—"XH-3296" touches on road hogs, but a road hog is a person who wants all the road to himself, and this seems to be the desire of "XH-3296"!

Motor cycling is a healthy sport, enjoyed best by the young—not, as "XH-3296" seems to imagine, by the short-sighted, deaf, or crippled. But then of course motor cycles were not even thought of in his youth.

Hertford. FIFTEEN-YEAR-OLD.

### *EXPERIENCES WITH A LIGHTWEIGHT SIDECAR OUTFIT.*

Sir,—As no one has yet given their experience with a lightweight sidecar outfit, perhaps I can start the ball rolling by stating mine.

The outfit, a New Comet, is fitted with a two-stroke engine of 293 c.c., having internal flywheels, C.A.V. magneto, Amac carburetter and Albion two-speed, gear box, with chain-cum-belt drive.

I purchased the machine last July, and have used it regularly in all weathers since, covering an average of 140 miles per week. Carrying a passenger half the time, the machine averages 80 m.p.g., which seems very good. Having driven several cars and motor cycles for some years, I am surprised at its power, as it will climb ordinary hills on a 5.75 to 1 top gear, and anything but a freak on bottom. A three- or four-speed gear would be exceedingly useful on hills when the bottom speed is too low, the machine being naturally slow then. Its maximum speed on the level with no wind is approximately 32 m.p.h. Of course, wind affects its speed greatly.

The sidecar itself is really comfortable and well sprung, much more than many heavier makes, and carries a 12st. person easily. The back is also high enough to prevent fatigue on long journeys. Owing to the lightness of the body, it is free from bounce when minus the passenger, neither does it lift on corners so easily as one would imagine.

The adjustments that have been necessary have been no more than for a heavyweight, and were greatly facilitated by the absolute simplicity of the outfit. In fact, decarbonising can be done in three-quarters of an hour. The most troublesome part of the machine is the clutch control (hand), although the adjustment of the contact breaker once caused queer running which took a fortnight to fathom, and only then after dismantling the whole engine.

Summing up, after 3,500 miles of hard riding, it appears quite a substantial and reliable bus, and of sufficient power for all normal riding. Usual disclaimer.

HAROLD WILSON.

### *ULTRA-RAPID AMERICAN TWINS.*

Sir,—I am the owner of a particularly hot 4 h.p. single, and on a recent Saturday afternoon I took a run down to Folkestone from Kensington. When on a fast stretch of road between the villages of Sw-ly and F-rn-n-ham I chanced to overtake an elderly blue 7-9 h.p. Indian. I am bound to admit that when I passed the machine I was topping the fifty mark, but, to my surprise, the Yankee had repassed me in a few seconds!

I opened my throttle full out, and gave chase, but found it absolutely impossible to keep up with him. Yet my speedometer (Bonniksen) registered 64 m.p.h. during this blind, and the Indian was travelling "two up," and was handicapped by "discs." (The wind was strong.)

Can any reader name an English twin which after several years' work is capable of putting up the same speed (probably 65 or 66 m.p.h.) with the same load? TRIUMPH.

Southend-on-Sea.

### TUNING A 4 H.P. TRIUMPH.

Sir,—Referring to the article by Mr. K. H. Leech on the tuning of a 4 h.p. Triumph for speed, I beg to state that I own a 1920 Model H of this make, and have been timed (electrical) over a flying half-mile in 27s. (approximately 66 m.p.h.). The only alterations from standard were an aluminium piston, Binks three-jet carburetter, and straight through exhaust pipe. The ignition timing was well advanced, but the valve timing was standard. A top gear ratio of 5 to 1 was used. TRIUMPH 4.

Peterborough.

Sir,—In the second column on page 360 about half-way down, occurs the sentence, "An ordinary straightfaced cam will give quick rise and slow fall to the *exhaust* valve."

Reference to the diagram on page 361 will show that "inlet" should be substituted for "exhaust."

Incidentally, experiments with a lower top gear ratio (5.4 to 1) seem to show that the engine "peaks" at about 3,400 to 3,600 r.p.m., and that the power falls off at above this speed, due largely to the valves not following the cams, with the standard valve springs

From Mr. Heather's formula, the horse-power developed would be about 12-14, probably nearer the lower figure.

K. H. LEECH.

### A TEST OR A DEFINITION?

Sir,—Referring to the leading article in your issue of last week, we are pleased that you have taken up the question of the "front stand ruling" in the A.C.U. Stock Trial.

We, as manufacturers, entered this trial on the understanding that it was purely and simply a test for *stock machines* as supplied to the public. Whilst we agree that the condition specifying a front stand was laid down in the official rules and was also noted by us, we would not, on principle, enter anything in this trial other than machines to standard specifications as supplied to the public.

If the A.C.U. continue to dictate to manufacturers and the public in these matters, we shall expect a demand for special gear ratios, special shape handle-bars, brakes, silencer, etc.

Manufactures should nip this in the bud, and in future refuse to enter a stock trial with anything but *standard machines*.

It would be interesting to know how many manufacturers of lightweights fit front stands.

THE BORDESLEY ENGINEERING CO., LTD.,
W. A. DISNEY.

### REVERSING A TWO-STROKE ENGINE.

Sir,—My machine is of 2¼ h.p. and has a sidecar attached; I am able to take the machine with passenger normally seated in sidecar backwards up the most severe hill in London, viz., Muswell Hill.

Those readers who are familiar with this hill will agree it is quite a novel performance.

I am curious to know whether any of your readers can claim the same experience. CURIOUS.

London, N.10.

### SIDECARS ON FREAK HILLS.

Sir,—As a simple soloist, I may be "rushing in, etc.," in venturing to address you on the subject of sidecar driving. If, in your opinion, this is so, please save me by not publishing this! After watching several recent trials including the Sandy Lane *fiasco* in the "Victory" Cup trial, I have come to the conclusion that the majority of sidecar drivers tackle these freaks in the wrong way. One sees machine after machine (I am speaking of sidecar outfits only), charge at it at (more or less) speed and end up by butting the bank on the left-hand side of the road, with an occasional clean climb to vary the monotony. The clean climb, however, is not confined to any particular make or type, nor is it simply a matter of choosing the right line or even of wheel grip, though it is true that many failures are due simply to wheel spin. But in a number of cases it is due, I believe, to the driver being so occupied in thinking of his back wheel that he forgets all about front wheel grip. He gets all the weight he can on the back wheel (do petrol cans on the carrier ever hold anything more solid than spirit?), and opens his throttle wide on bottom gear, with the result that, with so little weight remaining on the front wheel and the push of a roaring engine to the left, the machine refuses to obey the handlebars, and the whole outfit sidles into left bank of the road. I think I remember reading Frank Smith's advice years ago which modern riders might copy with success, "If you cannot get the machine to go to the right, cut out and steer, cut out and steer." No one who has watched critically can deny that, in climbing freak hills, brains go much further than brute force, and if competitors realised this we should not see nearly so many failures; route organisers suffer much abuse simply because there is so much hideously bad driving. J. M. PHILPOTT.

### CENTRES OF GRAVITY EXPLAINED.

Sir,—In your issue of March 16th your correspondent "Velocitas" uses an extremely novel method of arriving at the combined centre of gravity of a rider and a motor bicycle. Using his method of calculation, he could have made his figures much more striking by mounting his 150lb. rider on an ultra-lightweight weighing 75lb. If the centre of gravity of such a machine is 13in. from the ground and the centre of gravity of the rider seated on the machine is 35in. from the ground, then, according to "Velocitas" their combined centre of gravity will be $13 + \frac{15.0}{7.5} \times 22 = 57$in. from the ground, that is to say, *nearly five feet*, or somewhere about the rider's head. If "Velocitas" will look at any elementary book on statics he will find that the centres of gravity of the two examples he gives are really 20.45in. and 21.25in. above the ground.

I might also suggest from a slight consideration of rotational dynamics, that the speed, the virtual centre about which the machine is turning, the apex of the virtual cone developed by the steering head, and the radius of gyration of the machine and rider about the wheelbase, are all far more important factors affecting stability than the position of the centre of gravity. DE 2928.

Tenby.

### DESPITE DISABILITIES.

Sir,—I read with interest your leader entitled "Despite Disabilities" in a recent issue.

While agreeing in part that a rider who has lost a leg should not attempt to "perform" on a solo machine in sporting trials, I should like to have seen it more clearly stated that the loss of a lower limb is by no means an insuperable obstacle to the management of a solo machine under ordinary touring conditions, providing a suitable mount is selected.

I may mention that although I have lost my left leg at the hip-joint and do not wear an artificial limb, I have no difficulty whatever in the management of a single-speed lightweight (two-stroke); in fact, I was surprised to find that I felt safer in the saddle than when walking with crutches. C. L. HAWTHORN.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

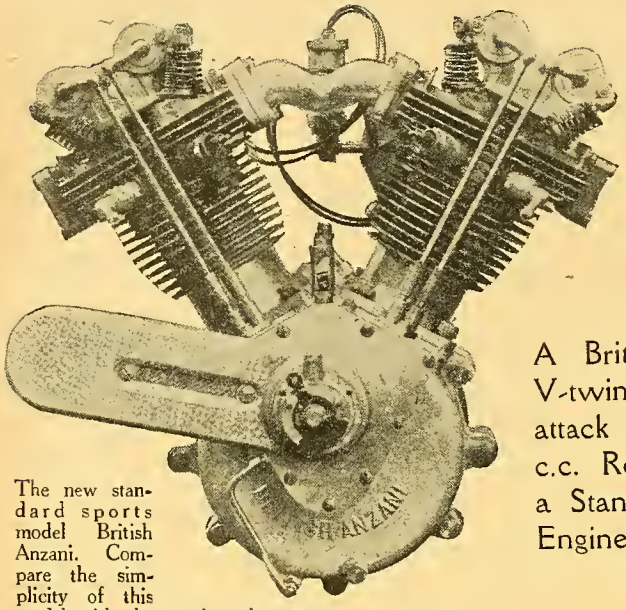
**"MOTOR CYCLE REMINISCENCES."**
By "Ixion," of *The Motor Cycle*.
Price net, 5/-. By post, 5/3.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

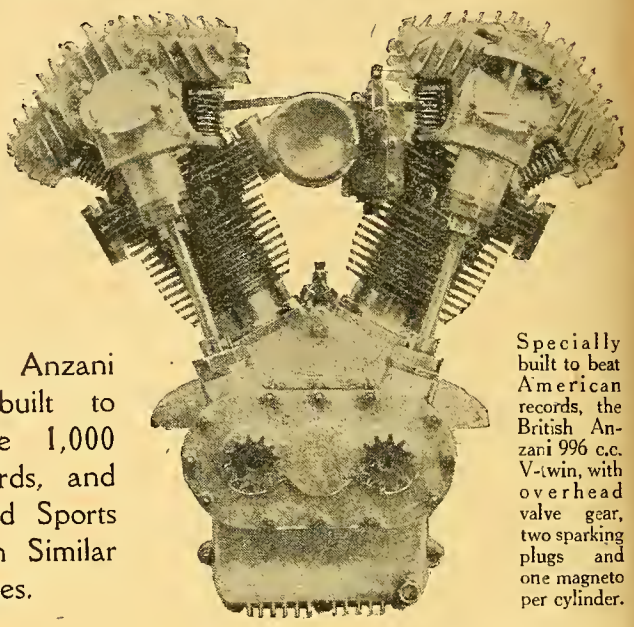
Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

# TWO HIGH-EFFICIENCY ENGINES.



The new standard sports model British Anzani. Compare the simplicity of this model with the purely racing type.

A British Anzani V-twin, built to attack the 1,000 c.c. Records, and a Standard Sports Engine on Similar Lines.



Specially built to beat American records, the British Anzani 996 c.c. V-twin, with overhead valve gear, two sparking plugs and one magneto per cylinder.

SPECIALLY built to win for England the high speed records at present held by America, the British Anzani racing engine (83 × 92 mm. = 996 c.c.) is a unit which promises to give an excellent account of itself as soon as it is ready for the track.

There are four valves in each cylinder, and these are actuated by means of a special cam gear in an oil-tight heavily ribbed aluminium case situated above the cylinder heads, each pair of camshafts being driven by two vertical shafts and bevel gearing. Universal joints of the pin type are provided at each end of these driving shafts.

In the case of the right-hand cylinder a Best mechanical oil pump is situated horizontally over the bevel gear camshaft driving case.

### Aluminium Bronze Cylinder Heads.

In the racing engine aluminium bronze is the material used for the cylinder head, which is carefully machined internally, and is provided with ports of enormous size. Particular attention has been given to lubrication, oil being delivered by the Best pump to the oil-tight overhead valve gear case and to a Y-shaped union between the cylinders. The big ends and roller main bearings are lubricated by splash.

Side thrust on the valve stems has been eliminated by the insertion of a small separate tappet rod to take the thrust. Each valve gear casing is provided with an internal exhaust valve lifter, while each cylinder has two plugs fired by its own double-spark magneto.

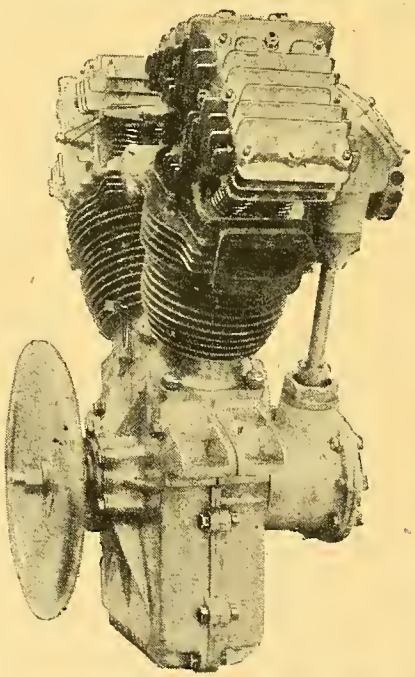
An induction pipe of large size is bolted on to the cylinders and attached to it is a triple venturi tube Zenith carburetter of large dimensions. An external flywheel is employed. Altogether the engine is a very fine piece of design, and should be highly efficient.

This engine, it is claimed, has already developed 46 h.p. at 4,000 r.p.m., but even better results are expected.

### A Standard Sports Model.

Of the same dimensions as the engine just described, the 8-10 h.p. sports model is built on somewhat similar lines to the special racing engine, but is a commercial proposition.

On each head there is a bracket supporting the rocker shafts, which run on ball bearings packed with grease; like the racing engine it has four inclined valves to each cylinder. Adjustment for the tappet clearance is provided, but the rods actuating the valve gear are not adjustable. The detachable heads, which are of the same design as those fitted to the racing engine, are in this case of cast iron, the valves opening into common ports, but being fitted with a baffle in between the two.



Three-quarter view of the racing engine, giving some idea of the size of the valve ports.

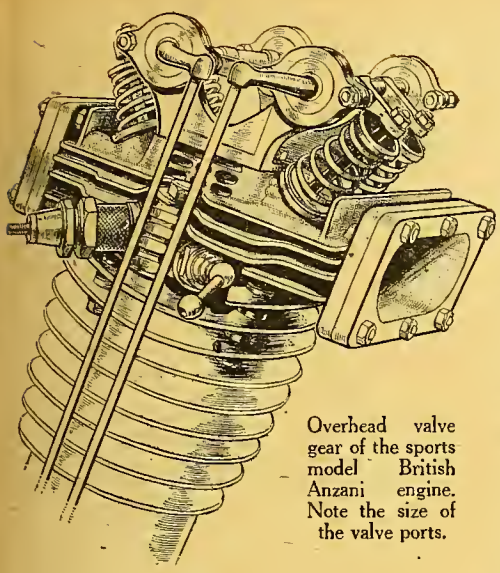
Differing from the racing model, which has a large ribbed sump at the bottom of the crank case, no oil is carried in the crank case of the sports engine, oil being delivered by a Best mechanical lubrication pump from the oil compartment in the main tank to the Y-connection between the two cylinders. This oil pump is situated on the magneto chain case. There is only surplus oil in the crank case, the Y-pipe delivering lubricant to a space round baffles on the top of the crank case, whence it is picked up by the piston, the moving parts being lubricated by oil mist.

### Aluminium Pistons.

Die cast aluminium pistons fitted with a scraper ring and strengthened by internal ribs are employed, while there is a groove below the third ring which is drilled to prevent oil reaching the combustion chamber. The gudgeon pins are a driving fit in the pistons, the cylinder walls being protected by brass pads.

The main shaft runs on ball bearings, while the big ends are an interesting piece of design. The forked big end is strengthened by means of a strap at its base preventing the fork from splaying, and quadruple roller bearings are employed—two for each bearing.

Reverting to the lubrication system, there is a deflector plate at the base of

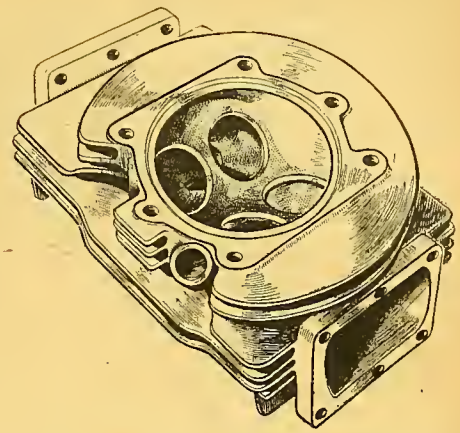


Overhead valve gear of the sports model British Anzani engine. Note the size of the valve ports.

the crank case which forces the oil through a lug in the crank case base, up a short pipe into the timing case. Here it is picked up by a thrower ring and distributed over the timing gears.

So far as bearings are concerned, practically the same arrangement for the cam rockers is adopted as on the connecting rods, one of these being forked, a long bush being used, the centre rocker running on the centre of the bush and the forked rocker bearing running on the outside of the bush. The point of contact with the cam is provided with a single Hoffmann roller, these rollers being kept in by shroud plates adjacent to the cams, and they should go far towards reducing friction.

We are naturally looking forward to seeing the performances of these engines on the road and track. From the ingenuity displayed in their design and the excellence of the workmanship, they will, no doubt, give an excellent account of themselves. These engines are manufactured by the British Anzani Engine Co., Ltd., Anzani Works, 30 Scrubbs Lane, Willesden, London, N.W.10.



Symmetry of design is a feature of the British Anzani combustion head, which tends to the utmost efficiency being attained.

# SUPER-SPORTING TRIALS.

## The Man, Not the Machine Nor the Nature of the Trial, the Most Important Factor.

IN *The Motor Cycle* not long ago, a leaderette drew attention to the fallacy that a motor cycle used in freak trials of necessity depreciates abnormally in second-hand value. In the opinion of the writer, neither the nature of the trial nor the machine used is the most important factor. All of us have seen in freak trials the type of rider for whom such events are utter folly. I recollect one of these participants in last year's Scott trial. Prior to the start he was racing his engine with the machine on the stand in a way which gave one headache and heartache. He was mounted on a brand new machine, the exhaust pipe of which was hardly blue, but he must have "done it in" literally during the event. His riding consisted of a series of blinds, heedless of surface, till he fell.

Certainly the machine which has been ridden in ultra-sporting events by a participant of this sort may prove a bad speculation for the second owner, but I agree entirely with the editorial view that (barring exceptions) a modern machine suffers no ill-effects whatever in a modern freak trial, such damage as occurs, if any, being of a very superficial kind, which a few cheap renewals set right.

### In Skilled Hands.

In support of this I would like to say that during the season 1920 my two team mates and myself rode the same machines in all the important trials, including the A.C.U. Six Days, the Scottish Six Days and Two Days, the Scott trial, and many others. At the end of the summer my own machine might almost have sold as new, and, in point of fact, I sold it to a friend, and it has given unqualified satisfaction ever since.

The foregoing is not written with any idea of self-commendation (and at all events the name hereafter is not my own), but simply to show that the folly of the freak trial is a matter of personal folly, *i.e.*, that the rider who is going to damage his machine by riding is certainly foolish to ride. To talk about fatigue of frame members through riding at excessive speeds over appalling surfaces is absolute nonsense to any old trials rider, for surely the whole art of trials riding lies in avoiding such things?

### Freak Trials for Sport.

Machines are to-day so perfect that I regard any kind of trial barring the freak as deadly dull, and certainly I do not think that last year's A.C.U. Six Days was in any sense to be compared with the one preceding it. Moreover, the previous trial was absolutely fair. I personally lost several marks on the freaks, yet because my machine was a good one, and did not crumple up or develop some mechanical defect, I came out with a gold.

When ultra-sporting trials cease to be, I for one shall lose all interest in motor cycle events, and shall confine myself to the less varied thrills of Brooklands on four wheels.

STAG MOSS.

NEXT WEEK!

THE MOTOR CYCLE

SPRING NUMBER AND BUYERS' GUIDE

### South African Imports.

Imports of motor cycles into South Africa for November last amounted to 91 complete machines, value £7,847; 47 sidecars, value £1,497, and £2,523 of parts.

### Every Machine on the Market.

Next week's issue of *The Motor Cycle* will contain amongst many topical and entertaining features a completely illustrated Buyer's Guide, giving brief specifications and prices of all makes of machines.

### The Youngest French Motor Cyclist.

Wilfrid Dupuy, who last week won his class in the Cœur-Volant hill climb, is the youngest French motor cyclist to possess a driving licence. He is 12 years of age, and had to compete with 50lb. ballast. He is the son of a director of the *Petit Parisien*.

### "The Motor Cycle" Film in Sheffield.

Vickers Institute, Don Road, Sheffield, has been secured by the Sheffield M.C.C. for the display of *The Motor Cycle* film on Saturday. The chair will be taken by Mr. Evans, J.P., of Messrs. Vickers, Ltd., at 7.30 p.m. A grand organ is installed, and an organist and vocalists will be present. In addition some Vickers works and aviation films will be shown. All motor cyclists are invited.

### Clubs and Taxation.

At a meeting of the Portsmouth M.C. & L.C.C. the subject of taxation was discussed, and it was unanimously agreed to ask all motor cycling clubs to support the following resolution, with a view to making a united protest:—"The Portsmouth and District M.C. & L.C.C. are of the opinion that the unfair tax on motor cycles should be reduced, taking into consideration that the income of the owners of these vehicles has been considerably reduced, and that the tax should at least be reduced in proportion." Other club committees might do well to bring this important matter before their members.

KNIFE GRINDING UP TO DATE. This busy ex-Service man was recently snapped in Bristol by one of our photographers. An Autowheel unit supplies the power for the perambulating grinding bench, and its owner was loud in his praises of the engine's cool and steady day-long running

## Special Features.

**100 M.P.H. ON A "3½." ON THE HILLS OF THE WEST. THE NORFOLK BROADS.**

### Questions of Balance.

It may interest many of our readers to learn that frame design plays an important part in balancing an engine. For example, a M.A.G. fitted in a Morgan has to receive treatment different from that necessary with a similar engine fitted in a Matchless.

### A Spanish Cycle Car Race.

Among countries where motoring and motor cycling are intensely popular is Spain and many sporting events have been organised in that country. We have received particulars of the Armangué trophy, to be competed for in a cycle car race organised by the Real Moto-Club of Catalunya. The event will be run under F.I.C.M. rules, and will conform to the regulations of the Royal Spanish A.C.

### Ambitious.

A motor cycle club has been formed in Worthing and an open trial from Worthing to John o' Groats, thence to Land's End and finally back to Worthing, figures on its fixture card. Whether this event has received a "permit" we are unaware, but apparently the Worthing worthies believe in tempting Providence, for the club flag is to be blue with a white circle, "inscribed with the figures thirteen in red."

### Stolen Machines.

Recently a well-known Midland manufacturer had his sidecar outfit stolen while it remained outside an hotel; now we learn that a four-speed P. and M. outfit, belonging to Mr. B. Marians (of Phelon and Moore, Ltd.), was stolen from outside his house about 2 p.m. on Monday, March 13th. In this case the machine may be identified by its having a 3½h.p. 1922 engine and an experimental type of four-speed control.

### A Buyer's Guide of Cars.

The Spring Number of *The Autocar*, which will be on sale all over the country to-morrow, price 4d., contains within its attractive coloured cover, not only the usual popular features, but also an illustrated Buyer's Guide to the cars of 1922. This enlarged issue of the representative automobile journal is one which should be filed by all interested in contemporary automobile design, whether they are prospective buyers or not.

## The Colmore Cup Winner

WAKEFIELD Castrol Regd. MOTOR OIL

***It sells because it excels***

Castrol Oil was used by Mr. T. C. de la Hay, the winner of the "Colmore Cup" Trial, riding a 4¼ h.p. Sunbeam and sidecar.

The "Watson Shield" and the "P. J. Evans Cyclecar Trophy" were also won by competitors using this oil.

### Thanks Tendered.

The committee of the Birmingham M.C.C. wishes to convey its most sincere thanks to the unknown owner of the Swift car who carried F. P. Andrews to hospital after the latter's accident in the recent Victory Trial.

### Only Open Hill Climb of 1922.

So far the only hill climb of the year for which an open permit has been granted is that of the S. Midland Centre (A.C.U.) on April 29th; the venue will be Kop Hill at Princes Risborough. Entries, sent to Mr. W. Mathews, 6, St. Aldgates, Oxford, close on April 15th.

### Next Saturday's Twelve-Hour Run.

One hundred and two motor cycles and three-wheeled passenger machines have been entered for next Saturday's twelve-hour open trial of the Western Centre A.C.U. There are also twelve four-wheelers, ranging from G.N.'s to 20 h.p. cars.

### Amateur Rider Joins J.A.P.'s.

Formerly secretary of the Oxford University M.C.C. and the first private owner home in last year's 500 Miles Race, Mr. J. E. G. Harwood has joined J. A. Prestwich and Co., Ltd., as chief correspondence clerk. He still hopes to go in for a certain amount of competition work.

### Travers Trial Rules.

Regulations and entry forms are now available for the Travers Trophy Trial, the North-Eastern Centre open event to be organised by the Newcastle and District M.C. on the 22nd inst. Mr. H. Gillies Wicks, c/o Coopers, Ltd., Westgate Road, Newcastle-on-Tyne, is the secretary.

### "Palman Qui Meruit Ferat."

Entitled "Pointed Facts," a striking little folder has been issued by the Publicity Department of the Edinburgh and District M.C. regarding the advantages of competing in—or watching—the forthcoming Scottish Six Days Trials. It is an excellent effort, although probably the event needs this sort of thing less than any of the big 1922 competitions.

### Insurance Premiums Raised.

Motor cyclists will receive with mixed feelings the news that insurance premiums have received a general increase, taking effect from April 1st. For a comprehensive policy for a 2¾ h.p. machine only an additional 10s. is required on the £4 rate, but the other changes are proportionately heavier, being: 4 h.p. from £4 10s. to £6 10s.; 5 h.p. from £5 to £7 10s.; 10 h.p. from £6 to £9.

### Riding Against Time!

Owing to the fact that there is no telephone in Ottery St. Mary, Devonshire, a motor cyclist had to ride nineteen miles into Exeter to summon the fire brigade on the occasion of a fire which threatened to assume serious proportions. The gallant driver, Mr. Brian Baker, to save time started off in pyjamas and mackintosh, and although he borrowed a pair of trousers on the way he was completely exhausted with the cold when he reached his destination.

### Date of the Anglo-Dutch Trial.

This year the Anglo-Dutch trial will take place in Holland, the date fixed provisionally being July 28-30th.

### A Welcome Mite.

No class of people in the Isle of Man benefit more from the T.T. races than the hotel and boarding house keepers. Mr. T. Aylen, of the Hydro, Queen's Promenade, Douglas, has just presented a cheque for £5 5s. to the Manx M.C.C. for the T.T. Fund.

### MOTOR CYCLE QUARTERLY LICENCES.

*Many motor cyclists are in doubt as to when to pay their licences, and also exactly how long these are available. Quarterly licences expire on March 24th, June 30th, September 30th, and December 31st. If a licence is taken out before any of these dates of expiry the full unexpired quarterly licence must be paid. Example: For a licence taken out in respect of one lightweight on June 29th, 10/–, one full quarter's licence must be paid for one day's use. For a motor cycle over 200 lb., to which a sidecar is attached, licensed on June 29th and retained by its owner till the end of the year three successive quarterly licences of 25/– each are necessary. The three remaining quarterly licence rates are:—Lightweight and sidecar, 15/–; Motor bicycle over 200 lb., 20/–; and Three-wheeler, 25/– (the same as a heavy motor cycle and sidecar).*

### Single *v.* Twin.

In the history of the 500 c.c. class it is remarkable that the single-cylinder has far more records to its credit than the multi-cylinder. Of the whole list quoted in the current issue on page 387 only one V and two flat twins make their appearance. Notwithstanding, the first machine to attain 100 miles an hour was equipped with a flat twin engine.

### Motor Cycle Driving Lessons.

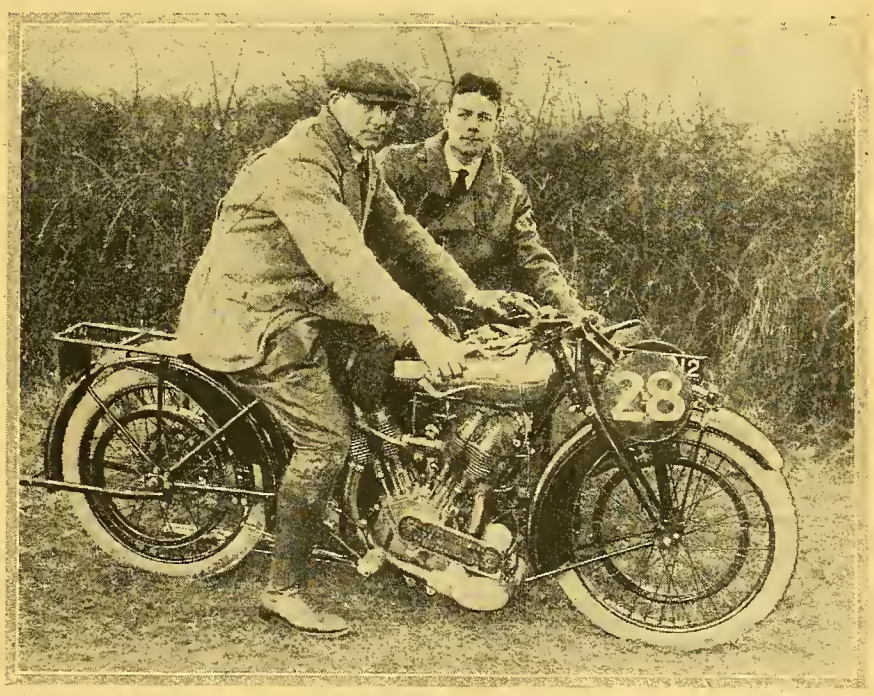
While there are plenty of schools of good standing where motor car driving is taught, one very rarely hears of people professing to teach motor cycle driving. This is in itself a tribute to the efficiency of the motor cycle. It is usually only necessary to explain the controls and the tyro rides away. After that Experience, the best tutor, finishes his education.

### The Freemasonry of the Road.

Years ago a motoring acquaintance of ours bought his first car, and after being taught to drive was told always to stop and offer assistance to anyone stranded by the roadside. Soon afterwards he came upon a stranded motor cyclist and courteously offered his aid. The motor cyclist held up an inner tube rent in twain, and remarked, "What can you do with this . . . thing?" The motorist, who is the very best of fellows, now never offers assistance, though he gives it to all and sundry when they ask for it.

### Watch Your P's and Q's in I.O.M.

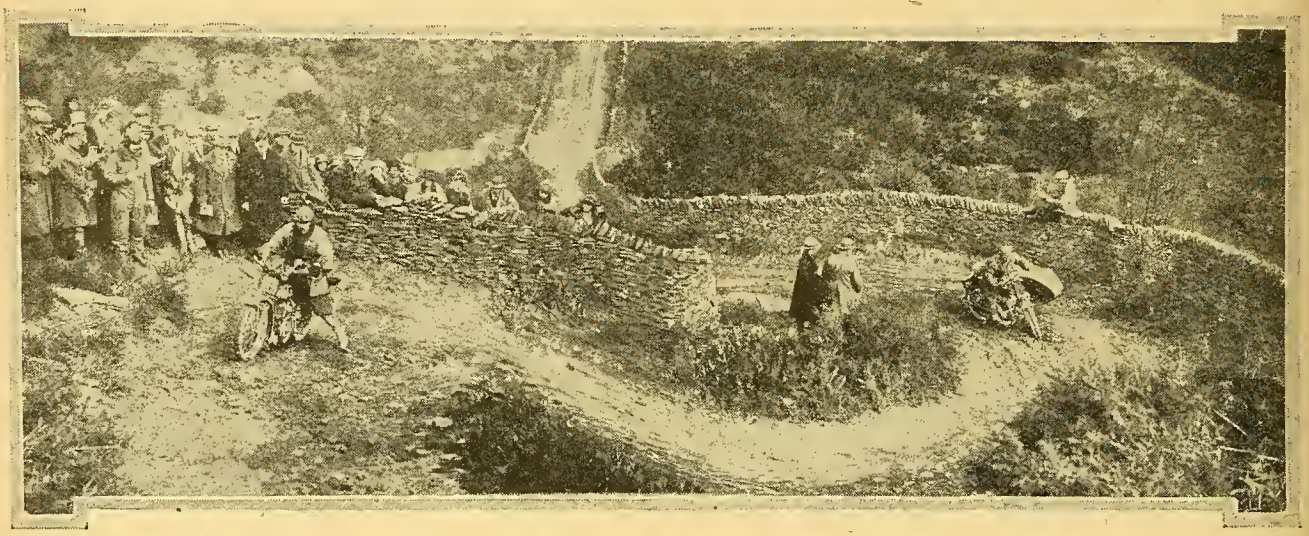
Whilst it is not obligatory for a motor cyclist in England or Scotland to exhibit a rear light on his mount when indulging in night riding, by a peculiar twist of a twenty-five-year-old Manx law, which had not previously been enforced, the rear light is a legal requirement in the I.O.M. One can only characterise the initial prosecution as a vexatious proceeding. The innocent "offender" was a young clergyman, who, when he arrived in the Island, enquired, and was told that a rear light was not necessary. Then the awful majesty of law descended upon him. The police intended the case to be a warning to other motorists, they said.



H. Le Vack, who has hitherto performed so conspicuously on American machines, is now associated with the makers of J.A.P. engines. He is here shown mounted on an 8 h.p. Brough-Superior-Jap.

# OVER DERBYSHIRE BOULDERS AND CLAY.

## Mixture of Fair and Unfair Tests in East Midland Centre A.C.U. Open Trial.



Hunger Hill's flattened S bend is well portrayed in this fine composite picture of W. H. Hardman (3½ Wilkin) and F. H. Brown (4 Rex-Acme sidecar) on the most difficult stretch.

AMONG those who took part there were two distinct verdicts on last Saturday's East Midland Centre Open Trial: either it was a very sporting and enjoyable outing of concentrated but not insuperable difficulties or it was quite absurd. The latter view was more general.

We cannot subscribe unreservedly to either opinion. Two of the hills were artificial to an extreme degree. Had a tar-macadam surface replaced the existing litter of six-inch boulders, sand, and rock on "Lapidosa" and "Little Eaton Quarry," an out-of-tune, single-geared lightweight might reasonably have been expected to scale both these inclines; for, in each case, the rise is perfectly straight, quite short, and of no particular steepness. For the rest, the observed tests—hills, colonial sections, and watersplash—admittedly severe, cannot be designated as unfair.

Considering that, without Lapidosa and Little Eaton Quarry there would still have been no difficulty in weeding out 75% of the entry from the ranks of the gold medal winners, it is to be feared that trials organisers have not yet learned where to draw the line.

### Were they Reasonable?

Hunger Hill and Gorsey Bank watersplash also came in for much criticism; the former is perhaps on the border line of the doubtful, but its acute "S" bend and severe gradient were responsible for lost marks to an almost equal degree as its loose and uneven surface; the splash was such that it could be negotiated cleanly by a standard machine without any special preparation. Therefore the common allegation that it had been dammed for the event does not seem to carry much ground.

Starting at Leicester, the route kept to main roads as far as Derby, but a few miles further on these deteriorated into thickly mud-coated by-lanes, and thereafter until the lunch stop at Matlock Bridge, less than forty miles further on, the only variations in surface were for the worse. First, "a grass section (observed)," which was all the words imply, then a slippery hair-pin bend (also observed), then five miles of semi-snow-bound roads over the moors brought the 130 odd competitors to the first check.

Turning off *Via Gellia* was a new, and as yet unnamed, hill, with a consistently bad but hardly freakish surface for perhaps half a mile of steady climbing. Near the summit was a 60° grassy bend, and here were lost the first marks of the day. G. Brough (8 Brough Superior) footed, as did several other solo men.

Worse followed—in the shape of an extended colonial section ziz-zagging over almost impossible grass-grown cart tracks. Gradually the official observers became more widely spaced, and toward the end there were many quite unregistered falls. For five miles this sort of thing continued, and several riders were not ashamed to confess to as many falls before the next check. Full 20 m.p.h. was required between the two near by controls; "more haste, less speed," was the motto of the moment.

### Few Failures on Birchover.

Birchover Hill was wet and steep, but the mud had a bottom, and there were comparatively few failures. Among the early unfortunates were H. Greaves (2¾ Beardmore-Precision B. and S.), and R. M. Knowles (3½ Norton), who failed to rush the "sticky" stretch fast enough, and was consequently bogged. J. Cooke (3½ Sunbeam) also failed. During the first half-hour good climbs were made by J. N. Roberts (2¾ New Imperial), W. L. Handley (2½ O.K.), A. E. Salway (2½ O.K.), J. A. Newman (3½ Douglas), H. F. Harris (2¾ A.J.S.), L. A. Bees (3½ Beardmore-Precision), J. H. Simpson (3¾ Scott), P. L. Mayo (2¼ Coventry Eagle), W. H. Hadfield (2¾ Raleigh), Hugh Gibson (2¾ Raleigh), G. S. Boston (3½ Scott), and George Dance (3½ Sunbeam), the last-mentioned two being particularly sure, and, incidentally, well ahead of time. Several machines bore visible traces of earlier spills, bent mudguards, and number-plates; lamp sets slung over riders' shoulders being not uncommon.

There was quite a number of spectators on Rowsley Bar, drawn there probably by memories of the havoc which its deceptive double bend had wrought in pre-war trials. It did not count for much on Saturday; unrolled macadam, if bad for tyres, provides tolerably efficient wheel grip, and, on the whole, the rutted but dry colonial section which followed caused greater anxiety than the hill itself.

### Lunch-hour Hill Climbing.

There now remained only Hunger Hill between the buffeted riders and lunch at Matlock. The name of this precipice proved most appropriate, for it was well after two o'clock before those carrying three-figure numbers were allowed to attempt the climb. To prevent baulking the last check of the morning was located before the hill, and competitors were sent up singly in their own (lunch) time. This process was not a swift one, and for the tail-enders a two-hour interval dwindled to a matter of minutes.

There were about 80 soloists still in the running, but only four made non-stop ascents without foot-waving or touching. One was George Dance (3½ Sunbeam), who raised an ovation by the wonderful way in which he corrected an almost broadside skid just round the second bend; another was Bert Kershaw (2¾

**Over Derbyshire Boulders and Clay.—**

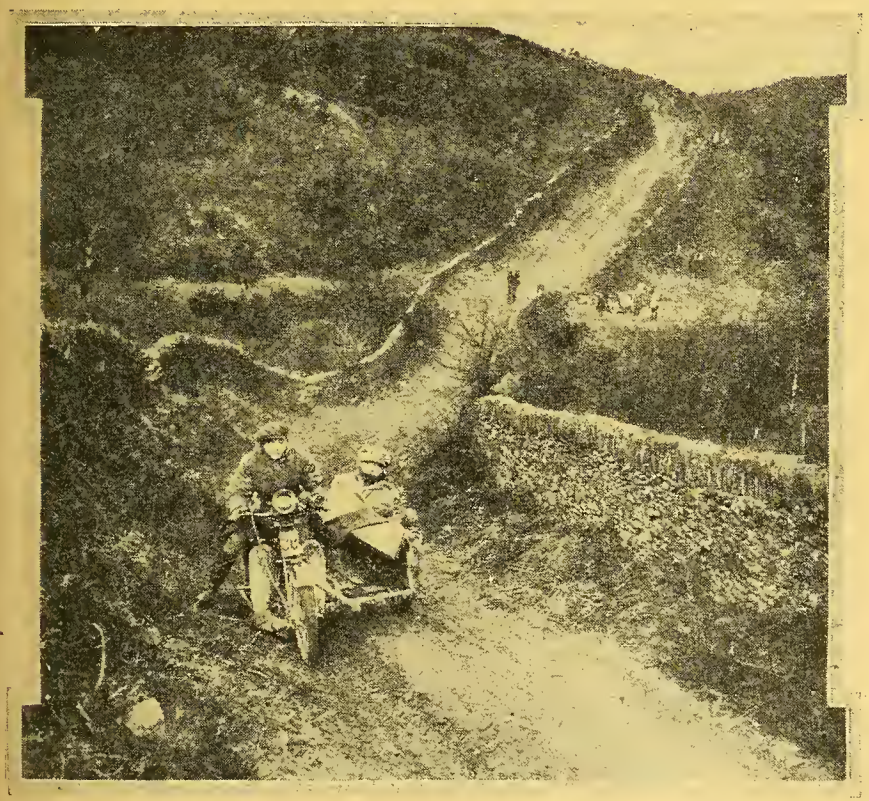
(New Imperial), who was steady and sure; the third, V. Gayford (3½ Zenith-Bradshaw), faster than Kershaw but less spectacular than Dance; and the fourth, W. R. Haggas (3½ Sunbeam), a North-country rider, whom none of Saturday's terrors seemed to perturb very much.

Sheer bad luck attended one or two of the others, who deserved to retain full marks. On one occasion R. A. Thacker (3½ Beardmore-Precision), who wore a bowler hat, was seen unconcernedly touring up the lower reaches in a gait and manner in keeping with the semi-dignified nature of his headgear. There was some laughter, and the opinion was expressed that he would not even reach the bends. But to the general surprise he rounded both faultlessly, picked his way daintily up the following straight, and was on the point of disappearing over the summit amid ringing cheers when—he rammed the bank!

### Nearly Successful.

J. A. Watson-Bonrne (8 Brough-Superior) made an impressive climb, marred only by one "dig"; C. J. Wilcox (6 Hazelwood), P. L. Mayo (2½ Coventry Eagle), W. F. Waddington (3 Ivy), H. S. Bemister (2¾ o.h.v. Coulson), who broke a belt, and P. G. Boult (2½ Connaught) were others whose attempts drew a succession of "hard lines" from the onlookers.

Leading up through the woods from *Via Gellia*, the first observed climb was not severe. The riders are W. L. Fincher (3½ Norton) and A. D. Mayo (2½ Coventry Eagle).



There was a treacherous loose patch at the commencement of Hunger Hill, where many followed A. Nott's example and gave slight foot assistance. Nott's machine is a 5–6 h.p. Raleigh sidecar.

Before commencing to list those who climbed well with an occasional touch mention must be made of F. Wooley (2½ Sun-Vitesse); his feet left the rests occasionally, but he did not once actually touch the ground.

Only four marks were, or should have been, lost by the following, who are arranged in rough order of merit:—G. Brough (8 Brough Superior), J. A. Newman (3½ Douglas), W. L. Fincher (3½ Norton), A. Bennett (3½ Sunbeam), W. Hadfield (2¾ Raleigh), G. Hope Wilson (2¾ Barr and Stroud)—took the inside of the hairpin, but pulled out with ample power to spare—D. A. Atkin (2½ Coventry Eagle), W. H. Hardman (3½ Wilkin), H. J. Stretton Ward (3½ Triumph), P. W. S. Hartwell (8 Brough Superior), H. Greaves (2¾ Beardmore B. and S.), G. H. Smith (4 Triumph), and F. Wallis (2¼ Velocette), a long-legged rider who almost walked his little mount up. Perhaps half a dozen other solo men made less inspiring but officially non-stop ascents.

Both the lady competitors, Mrs. O. M. Knowles (3½ Norton) and Mrs. Janson (2¼ Ner-a-car) had to receive assistance.

### Unavoidable Failures.

Several of the solo failures appeared quite unavoidable. For instance, P. Walker (2½ Excelsior) found himself at one time "see-sawing" on his crankcase, A. D. Mayo (2½ Coventry Eagle) grounded on his long exhaust pipe, while his wheel proceeded to dig itself in, and R. Lucas (3½ Scott) discovered that the low gear of the Squirrel is too high to take any clutch-slipping liberties on 1 in 5. The youngest competitor, A. Bowerman (2¼ Velocette), although not wholly successful,

Reg. Brown (3½ Sunbeam sidecar) breasting Lapidosa at a good speed

received much vocal encouragement for his plucky effort.

As usual on such hills, the chief problem of the sidecar drivers was to prevent their rear wheels from spinning. Experience tells in such cases, as witness F. W. Giles' (7 A.J.S. sc.) fast, clean climb in contrast to W. Chapman's several stormy failures on a similar outfit. Others to force passenger machines to the summit non-stop included: B. L. Bird (6 B.S.A. sc.), G. M. Townshend (4¼ P. and M. sc.), his passenger hurtling on to the carrier just in the nick of time, B. Bourke (4½ New Hudson sc), with front wheel 12 inches in the air at one time, and George Denley (2¼ Velocette sc.), who, however, after a wonderful climb met his Waterloo almost at the top, to everybody's disappointment.

F. O'Brien, driving an Anzani-engined Matchless, was baulked by a low petrol level in his tank, as apparently was F. J. Ellis on a standard sister mount.

### In the Afternoon.

Steep and twisting, but dry, Riber Hill, just over a mile on the return journey, was taken on the run by most. J. Cooke (3½ Sunbeam) footed, Mrs. Knowles (3½ Norton) simply stopped, D. H. Jones (3½ Beardmore-Precision), and A. J. Rayner (3½ Rudge-Multi), both ran alongside, were the exceptions.

More "colonial section" and an observed hairpin followed, and then the boulder-strewn cutting yclept Lapidosa.

The following soloists, in many instances more by luck than judgment, made commendably clean ascents:—H. V. Harris (2¾ A.J.S.), J. A. Watson-Bourne (2¼ Coventry Eagle), W. R. Haggas (3½ Sunbeam), J. Whalley (2¾ Massey-Arran), S. Lawrence (3½ Sunbeam), P. Walker (2¾ Excelsior), G. S. Boston (3½ Scott), L. Nicholson (2¾ Coulson), H. S. Bemister (2¾ Coulson), and V. Bourlet (3½ Ariel).

Those who failed were comforted later by the news that George Dance was numbered in their ranks.

### Sidecars Score.

The sidecars scored more heavily this time, and of twenty non-stops F. O'Brien (8 Matchless-Anzani sc.) was generally considered best, although it is difficult to give a definite verdict on the point.

More rutted, grass-grown tracks led to Gorsey Bank, the descent of which was by no means easy, through a splash at which 26 lost marks, and up a series of observed grades of varied surface and severity, terminating with Bream Fields Lane.

Quite a number of the sidecar passengers were becoming so suspicious by now that as soon as they saw a red flag they took up strategic positions on their carriers. N. Hall (2¾ O.K. sc.) and A. G. Cocks (4¼ Beardmore-Precision sc.) were the only failures, though several slogged.

### Little Eaton Quarry.

Little Eaton Quarry we have already referred to; before attempting to differentiate the performances we may qualify our remarks by pointing out that there was slightly more room to get up here than on Lapidosa. Luck again entered the game, but F. T. Hatton (3½ Douglas) and G. Dance (3½ Sunbeam) made very fine climbs without any aid from the fickle goddess.

Others deservedly "O.K.-ed" were:—H. V. Harris (2¾ A.J.S.), J. Simpson (3¾ Scott), W. H. Hadfield (2¾ Raleigh), A. Bennett (3½ Sunbeam), P. W. S. Hartwell (8 Brough-Superior), H. J. Stretton-Ward (3½ Triumph), H. S. Bemister (2¾ Coulson), and practically all the sidecars.

Of the three-wheeled cyclecars, P. Yates (8 New Hudson) and N. Norris and H. F. S. Morgan (Morgans) stormed up as if nothing else mattered.

So extensively strung-out were the competitors by now that some time before the late men put in an appearance there was a continual stream of motoring spectators making their way along the rough and narrow track *away* from the "hill," to the general discomfiture of those approaching.

*Viâ* Nottingham to the late finish (8 o'clock) at Leicester it was main road going; there was certainly no need for further obstacles.

Whoever wins the Raleigh Cup (the premier award) will have thoroughly earned that valuable trophy.

Some idea of the absurdity of Lapidosa may be gathered from this view, which shows Sam Wright (4½ Humber sidecar) endeavouring to pick his way where no alternative track was possible!

# ENCIRCLING FRANCE IN TWELVE DAYS.

## Start of the Tour de France Reliability Trial of 2,300 Miles.

Trials in France usually secure a good deal of popular attention, especially so because the starting and finishing points are almost always arranged within easy reach of the general public. This picture shows competitors starting on the twelve days Tour de France, under cold and wet weather conditions.

THIRTY-EIGHT motor cycles, divided into seven different classes, and 30 cycle cars of 750 and 1,100 c.c., started in the Tour de France trials on last Saturday morning.

The event, which comprises a distance of 2,300 miles to be covered in twelve stages, at a fairly high average speed, is undoubtedly the most difficult competition of its kind ever held in France, and is one which had aroused an unusual amount of interest. The presence of cycle cars with the motor cycles is explained by the fact that in France four-wheelers of not more than 1,100 c.c. capacity and 771lb. weight come under the control of the motor cycle authorities.

### Marks on Mechanical Condition.

Before starting from Paris the competing machines were weighed and sealed, for in addition to an average speed to be maintained throughout the trip, marks are deducted for the breakage or replacement of any essential part. Beginning with 100 marks for a broken frame, a front or rear fork will cost 50 marks, a broken handle-bar 30 marks, a broken rim or mudguard 20 marks, 10 marks are deducted for a spring, stand, luggage carrier, exhaust pipe, and change speed or brake control mechanism.

The average speeds, which begin at 24⅘ m.p.h. for the 1,000 c.c. solo machines, are : 21 7/10 m.p.h. for the 350, 500, 750 c.c. solos as well as for the 1,000 c.c. sidecars, and 18⅗ m.p.h. for the 250 c.c. solos and for the 600 c.c. sidecars. One mark for each minute late will be deducted. It is considered by all that the average speeds are very high, in view of the length of the trip and the nature of the roads to be covered; the jury has the right, indeed, to lower the average if considered necessary on such difficult stages as the Nice to Grenoble run over the Alps, or the stage through the Vosges mountains.

### Police Assistance.

The start of the first stage, which was from Paris to Caen, via Rouen, a distance of 163 miles, was given at the Porte Maillot. It is significant of the attitude adopted by the French authorities towards these events that all traffic was diverted from the main road for a distance of two miles from the starting point, and for the first thirty miles out of Paris local police were on duty at frequent intervals to keep the road free for the competitors.

In the 250 c.c. class there are four competitors, among them being a Levis and a Velocette, with French riders. The 350 c.c. solos are nine in number, and comprise a Calthorpe, the new Belgian Gillet two-stroke with aluminium cylinder head, a couple of water-cooled Viratelles, and the Rasser, a rather curious machine with a double-channel section frame.

### Machines in the Trial.

In the 500 c.c. solo class two of the new Gnome and Rhone machines are entered. These mounts, which are designed by an Englishman, are just about to come on the market, and are the product of one of the biggest concerns in France. Naas remains true to the twin A.B.C., which is also built by the Gnome and Rhone Co., and the English machines in this class are a Sunbeam and a Rover, both with French riders. In the 750 c.c. section Lt.-Col. McKechnie's spring frame machine, with Coventry Victor engine, attracted a lot of attention, but was withdrawn on the first day. Others in this section are a vertical twin water-cooled Viratelle, a couple of Triumphs, Rover, B.S.A., Indian, and Harley-Davidson. Dubost is alone in the 350 c.c. sidecar class, his machine being a single cylinder two-stroke. J. Sykes on a Sunbeam and Leroux on a B.S.A. are the only competitors in the 600 c.c. sidecar class. In the 1,000 c.c. sidecar class the competitors are three Harley-Davidsons, a Blériot, a water-cooled Viratelle and a Sunbeam, this latter being handled by an Englishman (White).

DO NOT MISS "THE MOTOR CYCLE" SPRING NUMBER AND BUYERS' GUIDE.

*ON SALE ALL OVER THE COUNTRY, THURSDAY, APRIL 6th.*

# UP KOP HILL AT "70."

## Essex M.C. Hill Climb; Big Twin Makes Fastest Time. Consistent Running by 250 c.c. Lightweights.

O. L. de Lissa (8 Motosacoche-Mag sidecar) ran away with the passenger machine class. His time for the 903 yds. of Kop Hill was 39 secs.; 24 secs. faster than the next man.

IN conjunction with, and preceding, the open hill-climb for cars on Saturday last, the Essex M.C. ran off ten classes for members' motor cycles.

A large entry did not materialise, but some exceptionally fine climbs were made, and the star ascent of the afternoon, by Kaye Don (7-9 Indian) at a speed slightly over 70 m.p.h., was nothing short of marvellous. (Incidentally, the fastest ascent in the open car classes, done by Count Zborowski on a 4,500 c.c. Ballot, was $\frac{4}{5}$ of a second slower.)

### A Healthy "Baby."

Another outstanding machine was S. M. Greening's 2¼ h.p. Francis Barnett with the 250 c.c. J.A.P. engine. This machine made five ascents of the 903yd. climb, and its speed was 38⅜, 39⅖, 39⅕, 38⅕, 38⅕secs. respectively, a wonderfully consistent performance, the average time representing approximately 48 m.p.h.

C. G. Pullin, fresh from his 100 m.p.h. efforts on Brooklands, was competing, but his Douglas was firing irregularly, and in consequence he did not come into great prominence.

Only one untoward incident occurred, this being a fall sustained by T. C. de la Hay (3½ Sports Sunbeam), which put the machine out of action with a buckled front wheel. In a subsequent class on a 3½ h.p. o.h.v. racing Sunbeam, de la Hay made the second fastest and fastest single cylinder climb of the day, despite a bad wobble near the top.

Results were on time and formula, *The Motor Cycle* formula $\frac{C \times t^2}{W}$ (C = c.c., $t$ = time and W = weight) being used. The results, subject to confirmation, were :—

CLASS 1. (TOURING MACHINES UP TO 250 C.C.)

| | Secs. |
|---|---|
| S. M. Greening (2¼ Francis-Barnett-Jap) .. | 38⅜ |
| J. V. Prestwich (2¼ J.A.P.) .. .. .. | 44⅖ |

| O. L. de Lissa (10 New Hudson-M.A.G.) .. | 73⅕ |

On formula: Ware (196), de Lissa (457·5).

THE MOTOR CYCLE

**T.T. TELEGRAMS.**

*To those unable to visit the Isle of Man, "THE MOTOR CYCLE" telegrams, displayed in Agents' windows, have told the progress of the classic races lap by lap. Again this popular service is to be continued, and as the postal authorities cannot deal with more than a certain number of telegrams, firms desirous of displaying the wires in their showrooms should make immediate application for the service to the Advertising Manager, "THE MOTOR CYCLE," Dorset House, Tudor Street, London, E.C.4.*

# CLUB NEWS.

Some idea of the strenuous nature of the recent 24 hours trial organised by the Bath and West of England Motor Club will be gathered from the illustration, which shows several tired and dishevelled finishers immediately after their long ride through the night from Land's End.

*Photo: Bath Chronicle.*

### Coventry and Warwickshire M.C.

Regulations are now available for the Cole Cup Trial, to be held on April 8th. Entries close this morning.

### North Eastern Centre A.C.U.

Headway is being made by this newly formed centre and it now boasts a membership of nine clubs, the latest addition being the Newcastle M.C.

### Wensleydale M.C.

At a general meeting it was decided to alter the title of the club from the Leyburn M.C.

All motorists in this area are cordially invited to join. Full particulars from the hon. secretary, Mr. F. J. Wilson.

### West Kent M.C.

The club has considerably increased its activities this year, and consequently has vacancies for several new members. Affiliation to the A.C.U., a comprehensive fixture list, and arrangements to combine with the other Kent clubs for competition purposes, all contribute to provide a programme to suit every sporting and sociable motor cyclist. The meeting place is the "Bull Hotel," Chislehurst, where a warm welcome is promised to prospective members on club days. The subscription is 10s. 6d., and the hon. secretary Mr. H. J. Cox, Holly Mount, Blackheath Hill, S.E.10.

### Pendle Forest M.C.C.

Being situated near the notorious Pennine Range, this newly-formed club has considerable scope for running competitions, and a varied programme has been arranged for 1922. Mr. C. Dyson, Cherry Tree Cottage, Higham, Burnley, Lancs., is the hon. secretary.

### Sheffield and Hallamshire M.C. & L.C.C.

Over 100 machines turned up for the opening run held on the 19th inst. The pretty Derbyshire village of Castleton was the objective, and members and their friends spent an interesting afternoon in attempting to climb the old Winnats Pass, the surface of which was in a very greasy condition. Some good ascents were made, although the sidecar machines suffered from wheel slip.

### Cork and District M.C.C.

Results are now available of the reliability trials held on the 17th inst. from Cork to Killarney and back. The chief award, a cup and medal presented by the New Hudson Co., was won by R. H. Good (3½ Norton sc.). E. B. Russell (5 Brough sc.) and R. S. Russell (3¾ Scott) were second and third, and S. Coleman (3½ Norton sc.) fourth. The novices prize was won by J. O'Sullivan (2¾ A.J.S.), and the "first-time-out" prize by J. McCartney (8 Bat).

### Ealing and District M.C.

Entries for the annual London-Holyhead trial, which is open to clubs in the South-Eastern Centre A.C.U., close definitely on April 10th. The chief award is the Maudes Challenge Shield. Mr. F. A. Longman, 17, Bond Street, Ealing, London, W.5, is the honorary secretary, from whom any further particulars may be obtained.

### Ashford M.C. and L.C.C.

With Brig.-Gen. Pitt as president, a club has been formed at Ashford. Seven vice-presidents were also elected, and other officers as follows: Chairman, Mr. H. C. Pendleton; secretary, Mr. T. Bullen; treasurer, Mr. E. Tanton, with two ladies and twelve gentlemen for the committee; an inaugural run was arranged for April 2nd at 2 p.m.

### Dublin and District M.C.C.

The awards in connection with the St. Patrick's Day trial, described last week, have been announced as follows:—

GOLD MEDALS (100%).—A. Carton (3½ Norton), F. O'Connor (3½ Douglas), J. Healy (4¼ James sc.), R. Murphy (4 Triumph), P. Grimes (8 Ariel sc.), H. McAlister (2¾ A.J.S.), J. Browne (3½ Douglas), J. A. Carville (4¼ B.S.A.), W. H. Nisbett (3½ Norton), A. A. Wayte (3½ Sunbeam), E. McGuire (8 Enfield), G. A. Daly (4 Triumph), T. E. Greene (3½ Douglas).

SILVER MEDALS.—T. J. Slevin (2¼ Sun) 99%, R. Humphreys (2¼ Velocette) 99%, L. McCullagh (3½ Norton) 99%, D. Tyson (2¾ A.J.S.) 96%.

### North Derbyshire M.C.

The opening run will he to Castleton on April 9th, starting from headquarters, Hotel Portland, at 2 p.m. The president, Capt. H. D. Orr has invited the members to be his guests on this occasion.

### Yorkshire Centre A.C.U.

At a meeting of the Centre Board held in Leeds on Monday of last week the Darlington Club was formally elected to membership. In future the headquarters of the Centre will be the Guildford Hotel, Guildford Street, Leeds.

### Coventry Triangle M.C.

In spite of the rain and snow a good muster of members turned out to compete in the club's first sporting event—a paper-chase through the winding lanes of Warwickshire. 1, E. Prossor (4 Douglas), 16 marks lost; 2, J. Hudson (3½ Triumph) 19 marks lost.

### South-west Wales Centre A.C.U.

A Reliability Run will be held by the above centre on April 8th, starting from Ammanford at 9 a.m. Route: Carmarthen, Lampeter, Llangybi, Pumpsaint, Caio, Cynchordy, Llandovery (lunch), Llangadock, Trecastle, Cray, Pontardawe, Ammanford (fiuish). Distance, 130 miles. Entry fees, 7s. 6d. plus 2s. 6d. for those entering for centre championship. Entries to be sent to Mr. H. Graham ' Church, Glamorgan Hotel, Neath, before April 1st.

## Week-End Club Events.

*April 1st.—Surbiton M.C. One Day Mellano Trial.*
*April 1st.—Sale and District M.C.C. Invitation Reliability Trial.*
*April 1st.—Coventry Triangle M.C. Chairman's Run.*
*April 2nd.—Coventry Triangle M.C. Run to Fenny Compton.*
*April 2nd.—Sheffield M.C.C. Run to Southwell Cathedral.*
*April 2nd.—Southampton M.C.C. Run to Hindhead.*
*April 2nd.—Eccles and District M.C.C. Trial.*
*April 2nd.—Featherstone and District M.C.C. Opening Run to York Minster.*
*April 2nd.—Eastbourne and District M.C.C. Opening Run to Crowborough.*
*April 2nd.—Essex M.C. Run to Southend.*
*April 2nd.—Woolwich, Plumstead, and District M.C. Wilmot Cup Trial.*
*April 2nd.—Ashford M.C. and L.C.C. Opening Run.*
*April 2nd.—Eastern Counties M.C. Opening Run to Epping.*
*April 2nd.—N.W. London M.C. Opening Run to Tring.*
*April 2nd.—Bridgnorth and District M.C.C. Opening Run to The Wrekin.*
*April 2nd.—Darlington and District M.C. Reliability Trial.*
*April 2nd.—Rochester, Chatham, and District M.C. and L.C.C. President's Cup Competition.*
*April 5th.—Reigate, Redhill, and District M.C.C. Paperchase.*

### Preston M.C.C. (Brighton).

Taking the form of a paper-chase, the opening run was held on the 12th inst. in glorious weather. The "hares" only just succeeded in elnding capture in an exciting finish.

Application for membership to the club should be made to the secretary, Mr. H. J. Bridger, 44, London Road, Brighton.

### Bath and West of England M.C.

Nineteen competitors started for the twenty-four hours trial to Land's End and back, and the run—quite a formidable one as a club event—was a decided success. Lynmouth, Porlock, and Countisbury, with its 1 in 5 gradient, were included, the atrocious surface of the latter accounting for many failures and lost marks. The results are as follows:

SOLO CLASS.

Taylor Cup.—L. G. Williams, 3½ h.p. Norton.
Gold Medal—Cox, 3½ h.p. Norton.
Silver Medal.—E. C. Collins, 3½ h.p. Nortoo.
Bronze Medal.—E. Colmer, 2½ hp. Levis.

A remarkable feature of the trial was the five ties for the Catley Cup for sidecars. These five all completed the course without losing a single mark throughout, and it is a tribute both to the endurance of the riders and the qualities of the machines.

SIDECAR CLASS.

Catley Cup.—P. Difazio, 6-7 h.p. B.S.A.; C. H. Tucker, 4 h.p. Norton; F. G. Mann, 6-9 h.p. Harley; K. J. Woods, 3½ h.p. Wilkin; H. C. Walters, 8 h.p. Ariel (tied).

# VICTORY TRIAL RESULTS.

SINCE it was decided that marks lost on Sandy Lane should not be forfeited, there are considerably more gold medal winners in the Victory Trial, described last week, than were at first anticipated.

A bonus of two marks was awarded to all who made non-stop ascents, this decision being made before the observers' sheets were scrutinised.

**Bert Kershaw** (2¼ New Imperial) added to his long list of honours by gaining the premier award, the Victory Cup; the full official results are appended.

VICTORY CUP (for best performance).—**B. Kershaw** (2¼ New Imperial).

MIDLAND CUP (for best performance by a passenger machine).—**Reg. Brown** (3½ Sunbeam sc.).

DUKE CUP (for best performance by a solo machine over 275 c.c.).—**F. J. Price** (2¾ Diamond).

PREMIER CUP (for best performance by a solo machine under 275 c.c.).—**B. Kershaw** (2¼ New Imperial).

JENNENS CUP (for best performance by an amateur).—**Reg. Brown** (3½ Sunbeam sc.).

THE KNUTS TROPHY (for best performance by a team).—1st: B.S.A. team. (**B. L. Bird** (6 B.S.A. sc.), **J. H. Walker** (6 B.S.A. sc.), **H. S. Perry** (6 B.S.A. sc.). 2nd: Duke Triumph team. (**R. W. Duke** (4 Triumph). **R. T. Cooke** (4 Triumph sc.), **G. H. Kirby** (3½ Triumph).

GOLD MEDALS.

B. Kershaw (2¼ New Imperial),
J. N. Roberts (2¼ New Imperial),
S. G. Orford (2¾ Henley-Blackburne),
R. W. Duke (3½ Triumph).
A. Rollason (3½ Ariel),
T. Peck (3½ Ariel),
B. Riley (2¾ A.J.S.),
E. Mundey (2¼ New Hudson),
E. A. Barnett (2¾ Francis-Barnett),
W. Wells (3½ Sunbeam),
C. S. Burney (3 Beardmore),
W. Brandish (4½ Humber),
C. Spencer (3½ Douglas),
W. R. Bown (2¼ Bown),
L. G Green (2¾ Verus),
H. Gibson (2¾ Raleigh),
H. R. Fowler (5-6 James sc.),
L. Newey (8 Ariel sc.),
P. Perhson (4 Dunelt sc.),
R. T. Cooke (4 Triumph sc.),
L. F. Peatty (4¼ Hawker sc.),
C. Wilson (4½ Quadrant sc.),
T. H. Featherstone (2¾ A.J.S.),
A. Watson (3½ Sunbeam sc.),
R. G. Beesley (3½ Sunbeam sc.),
C. Hemphill (2¾ Excelsior),
Reg. Brown (3½ Sunbeam sc.),
B. L. Bird (6 B.S.A. sc.),
H. S. Perry (6 B.S.A. sc.),
J. H. Walker (6 B.S.A. sc.),
G. F. Bedell (2¾ Francis-Barnett sc.),
B. Bourke (4½ New Hudson sc.),
W. Brooke (2¾ Cotton),
H. P. Cutler (4 Norton sc.),
V. Hawkins (2¼ Excelsior),
J. W. Wills (4 Powell sc.),
J. H. Wood (2¼ Velocette),
S. H. Jones (2¼ Levis),
R. E. Pugh (2¼ Levis),
A. B. Edwards (2¼ Levis),
J. A. Newman (3½ Douglas),
T. Weaver (2¾ Sirrah sc.),
S. Wright (4½ Humber sc.),
J. H. Ross (3½ Sunbeam sc.),
A. King Smith (2½ Morris sc.),
R. C. Cooper (2½ Allon),
S. E. Longman (7-9 Harley-Davidson sc.),
H. V. Collins (3½ Norton sc.),
J. Whalley (2¾ Massey-Arran).
G. Dance (3½ Sunbeam),
E. J. Henson (2¾ Federation),
J. E. Greenwood (3½ Sunbeam),
T. C. de la Hay (4¼ Sunbeam sc.).
C. Greenwood (3½ Sunbeam sc.),
F. Giles (7 A.J.S. sc.),
H. R. Davies (2¾ A.J.S.),
W L. Handley (2½ O.K.),
G. Denley (2¼ Velocette),
H. Poole (2¾ A.J.S.),
G. J. Baragwanath (2¾ A.J.S.),
R. W. Lovegrove (2¼ Ner-a-Car),
G. Povey (2¼ Velocette),
J. J. Lloyd (7-9 Harley sc.),
G. A. Strange (8 Brough),
J. A. Watson Bourne (8 Brough),
A. Smith (2½ Calthorpe),
H. B. Denley (Rhode l.c.).
A. F. Nash (G.N. l.c.),
F. S. Spouse (T.B.),
J. W. Meredith (T.B.),
F. S. Morgan (Morgan),
F. J. Price (2¾ Diamond),
W. Ridley (9 New Hudson),
W. A. Carr (Morgan),
J. Allday (Rhode l.c.),
W. Moore (3¾ Scott).
J. F. Parker (7-9 J.F.P.),
G. H. Kirby (3½ Triumph),
A. W. Newman (7 James sc.),
A. E. Phillips (2¼ James),
H. J. Stretton Ward (3½ Triumph)

SILVER MEDALS.

A. D. Mayo (2¼ Coventry-Eagle), W. T. Woodcock (3½ Ariel), A. W. Thrush (3½ Sunbeam), W. Bell (2¼ New Hudson), L. A. Bees (3 Beardmore), A. Jarett (3½ Norton), H. Broughall (3½ Coventry Challenge), J. E. Bramley (3½ Coventry Challenge), S. Butcher (3½ Sunbeam), A. Weeks (2¾ Sirrah), E. Gates (2½ Sun), E. Smith (2¾ Connaught), T Richards (8 Brough), H. Boynton (7 James sc.), P. Mosedale, jun. (2¾ A.J.S.), M. Scatty (4½ Humber), T. Blumfield (8 Ariel sc.), R. Walker (2¾ Excelsior), P. H. Johnson (3½ Rudge), C. L. Reading (3½ Ariel), A. Cocks (4¼ Beardmore sc.), C. Ramstedt (2¾ Cotton), H. Greaves (4¼ Beardmore sc.), J. H. Mathers (7-9 Rudge), H G. Uzzel (8 New Imperial sc.), J. Dallison (2¾ Wooler), B. Bladder (8 New Imperial sc.), S. Judge (2¼ Velocette), W. H. Fortington (3½ Sunbeam sc.), A. Robbins (2½ Triple H.), W. Parkes (2¼ Sun), F. T. Sibley (3½ Rudge sc.), W. L. Danskin (7-9 Rudge sc.), F. A. Longman (3½ Ariel), F. Guest (3½ Humber), W. Shepherd (4¼ Edmund sc.), S. G. Neal (2¼ Neal-Dalm), F. Bicknell (2¼ Royal Enfield), C. Little (5 Coventry Victor sc.), F Brown (4 Rex Acme sc.), T. R. Gibbons (4 Rex Acme sc.), A. Bennett (3½ Sunbeam), N. Hall (2½ O.K. sc.), F. Harris (2¾ A.J.S.), Gus. Kuhn (2¾ Douglas), L. Poynter (4 Norton sc.), F. F. Downes (2¾ Hobart), P. Yates (9 New Hudson), J. Moxon (2¾ Monopole), R. C. Bennett (2¾ Federation), F. C. Boddington (8 Morgan), F Morrall (4¼ B.S.A. sc.).

# HILL CLIMBING IN THE RIVIERA.

## La Turbie Hill Climb at Nice. Records Broken.

Richard, an Indian rider, who despite a fall made the five mile ascent in 7m. 29s.

A TURBIE hill climb is one of the most popular events amongst French motor cyclists, and as a fixture it is historic, for the first speed contest up this mountain-side was held 5 years ago.

The hill, which is in the suburbs of Nice, is five miles long, perfectly surfaced, very winding, and being cut on the flank of the mountain presents not a few danger spots. The scenery is beautiful beyond description, particularly near the top, where there is a wonderful panorama over the Mediterranean coastline and the natural harbour of Villefranche.

Fastest time in the recent climb held here at the close of the Paris-Nice trial was made by Richard, a Marseilles rider, who climbed the hill on an Indian in 7m. 29s. This time is all the more remarkable in view of the fact that Richard fell on one of the turns. The second man in this class was Unia on a Harley-Davidson.

In the 500 c.c. class Pardon on an overhead valve Koehler-Escoffier was the winner in 8m. 17 1-5s., beating Dawson, the only English rider in the race, on a P. and M.

In the sidecar class Harley-Davidsons got the first three places. Cycle car races, in France, are always organised by motor cycle clubs, and in this class a very fine performance was made by Agnero, on a water-cooled Morgan, who climbed the hill in 7m. 27s., breaking the record by the substantial margin of 1m. 8s.

The following are the times by classes :—

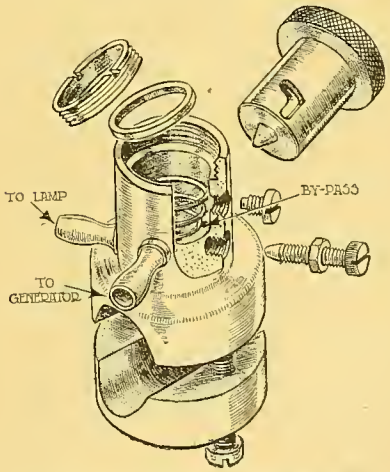
| | | |
|---|---|---|
| 250 c.c. : | | |
| 1. Sazias (Terrot) | ... .. ... | 17.33 2/5 |
| 350 c.c. : | | |
| 1. Gaudet (Terrot) | ... ... ... | 7.46 |
| 500 c.c. : | | |
| 1. Pardon (Koehler-Escoffier) | ... | 8.17 1/5 |
| 2. Dawson (P. and M.) | ... ... | 8.48 2/5 |
| 3. Lena (Magnat-Debon) | ... ... | 20.41 1/5 |
| 750 c.c. : | | |
| 1. Vattier (B.S.A) | ... ... ... | 9.47 1/5 |
| 1,000 c.c. : | | |
| 1. Richard (Indian) | ... ... ... | 7.29 |
| 2. Unia (Harley-D.) | ... ... ... | 7.33 3/5 |
| Sidecars, 1,000 c.c. : | | |
| 1. Verdy (Harley-D.) | ... ... | 7.58 2/5 (record) |
| 2. Porsi (Harley-D.) | ... ... ... | 8.40 |
| 3. Bricchi (Harley-D.) | ... ... | 8.48 2/5 |
| 4. Roux (Motosacoche) | ... ... | 9.20 2/5 |
| 5. Muraire (Indian) | ... ... ... | 9.25 4/5 |
| 6. Bellone (Harley-D.) | ... ... | 9.30 2/5 |
| 7. Sartorio (Harley-D.) | ... ... | 11.48 |

## DIMMING GAS LAMPS.

DIMMING of glaring head lamps is a courtesy which every road user appreciates; and the owner of an acetylene-lighted vehicle feels at a considerable disadvantage because he cannot return the compliment. The little device illustrated, however, puts him on an equality with the electricity user.

Intended to clip on to the handle-bar, the device, when out of action, allows the acetylene gas a clear passage. When the cylindrical valve portion, which works in a bayonet clip, is pushed right home the main pipe is closed and the gas diverted through a small bore by-pass, capable of regulation by the screw and lock nut on the left. It is claimed that the resultant increased pressure in the generator automatically cuts down the water supply without any alteration to the water valve setting. It is essential that a rubber gasbag be used between the generator and the dimmer.

The dimmer is sold at 12s. by Buckland and Burrell, Foots Cray, Kent.

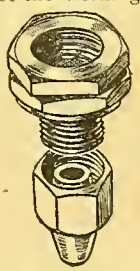


Part-sectional view of the Buckland and Burrell dimmer dissected. Pressure on the knurled topped plunger immediately dims the head lamp.

## PETROL FILTERING.

MUCH carburetter trouble would be avoided, in the opinion of C. Binks (1920), Ltd., Eccles, if two petrol filters were standardised—one to cover the jet itself, and the other to trap any impurities which might upset the working of the float needle. According to them, the slightest foreign body—a hair or a piece of fluff—causes the valve to be ineffectively closed, with resultant flooding and general inefficiency, which, on the face of it, is a very plausible theory.

To overcome this, they have marketed a special fine gauze filter, readily fitted under the tank without breaking the petrol pipe. It is neat, simple, and well finished.



Binks petrol filter, intended for attachment between the tank and petrol pipe.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### WEAK MIXTURE AT LOW SPEED.

My mount is a 1920 J model Harley-Davidson, and when I have been running at about 35 to 40 m.p.h. and I slacken down to about 10 m.p.h. I am then troubled with spitting at the carburetter. What is the cause of this?—D.A.

It would appear that you are getting too weak a mixture at low speeds. If you are using a Schebler carburetter the fault can be corrected by modifying the needle setting.

### A WIND WAGGON.

Would it be practicable to make a "wind waggon" using an air-cooled engine of about 5½ h.p. out of an A.C. Sociable; if it is, will you tell me if a propeller about 4ft. 6in. would do, and about what speed it would have to run? Would the machine go up the hills in West Yorkshire satisfactorily?—J.H.

The speed of the propeller would depend upon its pitch and diameter, and it would be necessary to get the information from the makers, as propellers are designed to run at one particular speed. It is extremely doubtful if the machine would climb the average hills in your district with an engine of such low power.

### TWO PROBLEMS.

(1.) What causes the splutter in the carburetter on a four-stroke engine when a weak mixture is given? (2.) What causes an explosion in exhaust pipe after several attempts at starting when engine is cold?—G.T.

(1.) The splutter or blow-back in the carburetter caused by the very slow burning nature of the flame associated with a weak mixture. The residual gases are still burning in the combustion chamber when the inlet valve opens on the next cycle, and, consequently, they escape along the induction pipe to the carburetter. (2.) The most common cause of an explosion in the exhaust pipe when starting a cold engine is due to a sticking exhaust valve caused by congealed oil on the stem. A temporary ignition fault (*e.g.*, stuck rocker arm) may have the same effect, as the first explosion will fire the unburnt gas which has been pumped into the silencing system.

## Important Dates.

**Sat., Mar. 25th, to Sun., April 9th—Tour de France.**
**Fri., Mar. 31st, to Thur., April 6th—Amsterdam Show.**
**Sat., April 1st—Western Centre A.C.U.—Open Reliability Trial.**
**Sat., April 8th—B.M.C.R.C., Members' Meeting at Brooklands.**
**Fri., April 14th, and Sat., April 15th.—M.C.C. London-Land's End Run.**
**Sat., April 15th, and Monday, April 17th—Western M.C.C. (Glasgow) Two Day Trial.**
**Sat., April 22nd—N.-Eastern Centre A.C.U. Open Reliability Trial.**
**Sat., April 29th—S. Midland Centre A.C.U. Open Hill-climb.**
**Sun., April 30th, to Sun., May 7th—Paris-Pyrenees Trial.**
**Mon., May 1st, to Sat., May 6th—Scottish Six Days Reliability Trials.**
**Sat., May 6th—B.M.C.R.C. Members' Meeting at Brooklands.**
**Sat., May 13th—Northern Centre A.C.U. Open Reliability Trial.**
**Sat., May 20th—S.-Western Centre A.C.U. Open Reliability Trial.**
**Tues., May 30th—Junior Tourist Trophy Race.**
**Thurs., June 1st—Senior Tourist Trophy Race.**
**Fri., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**
**Sat., June 10th—B.M.C.R.C. Open Meeting at Brooklands.**
**Sat., June 17th—Yorkshire Centre A.C.U. Open "Colonial Trial."**
**Sat., June 17th—Ealing and Dist. M.C.C. 200 mile sidecar race, Brooklands.**
**Fri., June 23rd, and Sat., June 24th—Irish Twenty-Four Hour Open Trial.**
**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**
**Sat., July 1st—East S. Wales Centre A.C.U. Open Speed Trials.**
**Wed., July 5th—Eastern Centre A.C.U. Open Speed Trials.**
**Wed., July 12th—French Grand Prix.**
**Sun., July 23rd—Belgian Grand Prix.**
**Fri., July 28th, to Mon., July 30th—Anglo-Dutch Trial in Holland.**
**Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.**
**Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.**
**Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.**
**Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.**
**Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.**
**Sat., Sept. 23rd—500 Mile Race at Brooklands.**

### TWIN REAR WHEEL ON TRI-CAR.

Some time ago an illustrated article appeared in *The Motor Cycle* on a type of three-wheeler with a twin rear wheel, or perhaps, to be more accurate, two wheels running on the same shaft (axle) placed very close together without a differential. As far as I know, the machine was not marketed, and it would be interesting to know why? If I remember rightly, the question arose as to whether the machine would be taxed as a three-wheeler or a four-wheeler, and I should be very glad if you would let me know what decision the taxation authorities arrived at.—B.C.

The machine to which you refer was no doubt the Merrall-Brown. This machine was certainly marketed during 1920, but we believe has since been discontinued in favour of a four-wheeler. There do not appear to be any serious disadvantages connected with the special form of duplex back wheel which was used. Incidentally, a twin rear wheel was used on Rex motor cycles about 1907-8. So far as the three-wheeler is concerned, when the treads of the twin rear tyres are not more than 6in. apart, we understand that, in the legal view it was not required to register as a four-wheeled vehicle.

### AN ENGINE KNOCK.

My machine, a 4 h.p. Blackburne, which has run perfectly for 4,000 miles, has developed the following trouble. After about five miles a faint knock occurs, which intensifies with every symptom of overheating. If I allow the engine to cool down it again runs perfectly for a few miles and the knock then re-occurs. The magneto may require adjustment, but as the engine starts perfectly at the first kick and runs well for a few miles, it appears nothing much can be wrong. Valves and ignition timing are in accordance with makers' recommendations, and compression is perfect. I have just decarbonised, and the engine is clean, and there seems no appreciable wear in big or little ends.—F.O.L.

The knock which you mention, providing it is not a mechanical knock due either to worn bearings or to the piston, is probably traceable to pre-ignition caused either by a defective sparking plug or to a faulty adjustment of the contact breaker. Examine

the plug, and, if at all doubtful, replace. See that the plug points are not more than $\frac{1}{16}$in. apart. The contact breaker points should not open more than 1-64in., or according to the gauge which the magneto makers will supply.

### A CYCLE CAR SILENCER.

Being desirous of making a silencer for my three-wheeler, so as to reduce the noise and vibration (8 h.p. twin engine), I propose using a tube 16in. x 4in. diameter. Would this do? Also, could you tell me if an ordinary open chamber would answer, or should I have to fix "baffle plates" (perforated) inside; if so, how many and how spaced? The exhaust pipes ($1\frac{1}{8}$in. outside diameter) meet at 9in. below the cylinder ports in a Y-piece, and there is no silencer on the extension. Would it be an improvement if I had two pipes separate, both direct into the silencer?—C.H.

A silencer 16in. x 4in. should be large enough to give reasonable silence; there should be no need to fit baffle plates unless the outlet is larger than $1\frac{1}{2}$in., as quite a reasonable degree of silence should be obtained. It would be preferable to lead a separate pipe from each cylinder into the silencer as you suggest, but an additional silencer on the extension pipe should not be necessary.

### REMOVING A CONTACT BREAKER.

I wish to clean and adjust the points of the contact breaker on a T.B. magneto. To do this, it seems necessary to remove the rocking arm; but this presents difficulties to me. Beyond the flat retaining spring the rocking arm is fixed by the curved spring, secured with grub screws to the rocking arm itself, and to a stud on the contact breaker. The heads of these screws are covered by the end plate of the magneto (the end plate having a projecting circular flange into which fits the circular strap carrying the cam which separates the points.) Can I remove the rocker arm without previously removing either the contact breaker or the magneto end plate? And if one of these must be removed, which is the better way?—F.O.L.

You will have to remove either the contact breaker casing or the contact breaker itself. To do either is quite simple, although in the case of the former it may be necessary to disconnect the control wire. Having done so, merely withdraw the casing, taking care not to twist it at the same time, otherwise it will bind in its housing and be difficult to move. When the casing is off it is quite easy to remove the contact breaker. Unscrew the centre bolt and carefully prise the contact breaker away from the magneto, using a screwdriver or preferably two screwdrivers, diametrically opposed to each other, between the back plate and the armature and plate. (Proceed carefully, and do not use unnecessary force.) When replacing the contact breaker, make sure that the small key on the back is correctly engaged with the keyway on the armature spindle, and do not over-tighten the centre screw. Do not attempt to remove the rocker arm unless the points obviously need trimming. If you can clean them by inserting a petrol soaked rag or a piece of cardboard between them, or even a slip of fine emery cloth, so much the better. If you have to remove the rocker arm the curved spring must be released at one end. Hold this very carefully when withdrawing the small grub screw, as these springs have a nasty habit of projecting the screw with tremendous force if they are carelessly released as the screw leaves its thread, the screw being then almost invariably lost.

### BADLY WORN PISTON RINGS.

My 1915 single-geared Villiers-engined two-stroke will not take much air without popping back. It starts all right cold, but after about a quarter to half a mile the explosion develops from a clear "ponk" to a horrible "fluff," and compression disappears. It will now run for a *short* time if I inject oil very liberally. When the fluffiness starts throttle and air alterations hardly make any appreciable difference. A curious metallic rattle also develops with the fluffiness. I removed the cylinder, and all was in order, all bearings were sound and without wear, there was no appreciable carbon deposit. The piston rings have considerable play, about $\frac{1}{16}$in. to $\frac{1}{8}$in. *vertically*. Would wider rings do any good?—A.L.G.

You should certainly attend to the piston rings if the play is anything like as great as you suggest. It is most unusual, even with very long wear for piston rings to develop more than $\frac{1}{32}$in. vertical play.

### WEIGHT OF NEW PISTON.

I recently had a new piston fitted to an old h.p. Rover, but find the engine vibrates somewhat when running free. The new piston weighs 4lb. and the old one only 3lb. I find after placing the main shaft with flywheel across a bench, resting level upon two pieces of smooth $\frac{1}{4}$in. steel, and the connecting rod attached, that it takes just 2lb. $7\frac{1}{2}$oz. additional weight to make it balance with the balance weights on the opposite side. What weight should the piston be? I could get it lightened by drilling.—W.N.C.

The figures you give are insufficient to enable the balancing of the engine to be worked out, but if the old piston weighed 3lb., it should have been replaced with a new one of the same weight, providing, of course, that the machine was previously reasonably free from vibration.

### GETTING THE MOST FROM AN OLD MACHINE.

I have a 1913 $3\frac{1}{2}$ h.p. Triumph with three-speed hub clutch, and have just fitted a Douglas sidecar. The sidecar seems fairly heavy, and I should be much obliged if you will kindly let me know: (1.) What is the best gear ratio? (I have it at 5 to 1 on top gear.) (2.) What do you consider the best size jet to use? (Triumph 1913 carburetter.) (3.) The sidecar is sprung on a leaf spring across the width of the car, over the axle. (It seems to jolt, and I wondered if I could fit two coil springs in any position to obviate this?) (4.) The engine seems to become very hot. Would a smaller jet do any good to this? The machine is in excellent condition, not having been used for some years.—W.Y.

(1.) The gear ratio is rather high for the machine mentioned with a heavy sidecar, and you would certainly do better with a $5\frac{1}{4}$ to 1 gear. (2.) Probably a jet of about 32 would be correct. (3.) It is not clear whether you mean that the sidecar springing is too rigid, whether it "bottoms" or whether it throws upwards. No doubt shock-absorbing springs could be fitted with advantage. (4.) A lower gear ratio would probably get over the trouble of overheating, and it is more than probable that a slightly *larger* jet would improve the running.

CHAIRING A RECORD BREAKER. R. N. Judd being carried off the Brooklands track by his enthusiastic colleagues after breaking the 1 mile mean speed record on the new o.h.v. Norton. Mr. J. L. Norton will be observed wheeling the machine.

## READER'S REPLY.

### INTERMITTENT LOSS OF POWER.

I have had precisely the same trouble as "J.W." with a similar machine, which, in my case, was due to defective piston rings. Presumably, when there was a good supply of oil round the piston, it held compression until the oil was distributed or burnt, when the power fell off until the next charge of oil was given. Of course, "J.W." may have inspected his rings, particularly as he says the engine is in perfect condition, which is rather strange in view of his opening remark.—W. G. DIXON.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.*

"E.G.J." (Greenwich).—7-9 h.p. Harley-Davidson sidecar, 8 h.p. Brough Superior sidecar, 8 h.p. Henderson sidecar, also Challenge inner tubes.

"W.H." (Ashton-under-Lyne).—2¾ h.p. A.J.S. (Model B1): Consumption, comfort, acceleration on hills.

"F.F." (London, S.W.4).—2¾ h.p. Raleigh.

"A.H." (Leicester).—370 c.c. Connaught: Lubrication, pillion riding.

"NOVICE" (Grimsby). — 4½ h.p. Quadrant sidecar.

"F.T.H." (Whitstable).—3 h.p. Beardmore-Precision two-speed sports model.

"P.G.D." (Dovercourt).—Indian Scout, electrically equipped model.

"F.A.C." (Leeds).—4¼ h.p. Coulson, with sidecar.

"H.H.K." (Edington).—1920 American X sidecar: Consumption, tyres, clutch, speed.

"E.A.M." (Gravesend).—1920 4 h.p. Bradbury, three-speed.

"E.B.K." (Bowes Park).—2½ h.p. Metro-Tyler, enclosed model: Oiling system, maximum speed, drying up on full throttle.

"F.R.B." (Dover). — Adjustments of Binks carburetter on 6 h.p. A.J.S.

"J.T." (Shirebrook).—4½ h.p. Quadrant sidecar.

"P.V.J." (H.M.S. *Warwick*).—A.V. two-seater: Comparisons with 8 h.p. outfit.

"R.H.C." (Kingston-on-Thames.)—Fallolite lamp: Durability of pastille.

"A.E." (Maidenhead).—S.A. Impulse starter: On 8 h.p. J.A.P.-engined machine without kick-starter.

"A.R.M." (Rutherglen). — 2¾ h.p. standard sports A.J.S.

"R.F." (Windsor).—1920 A.B.C.: Consumption, speed, etc.

"R.E.P." (Nottingham). — 4½ h.p. Quadrant sidecar: Power and long distance runs (chain and belt model).

"F.C." (Mansfield).—6.5 and 8 h.p. Brough Superior, solo: Speed, comfort, consumption.

"G.M." (Windsor). — 3 h.p. A.B.C., solo or sidecar: Climbing, springing, etc.

"E.C.P." (Ealing).—Morris tube protector.

## SPARKLETS.

### A Price Reduction.

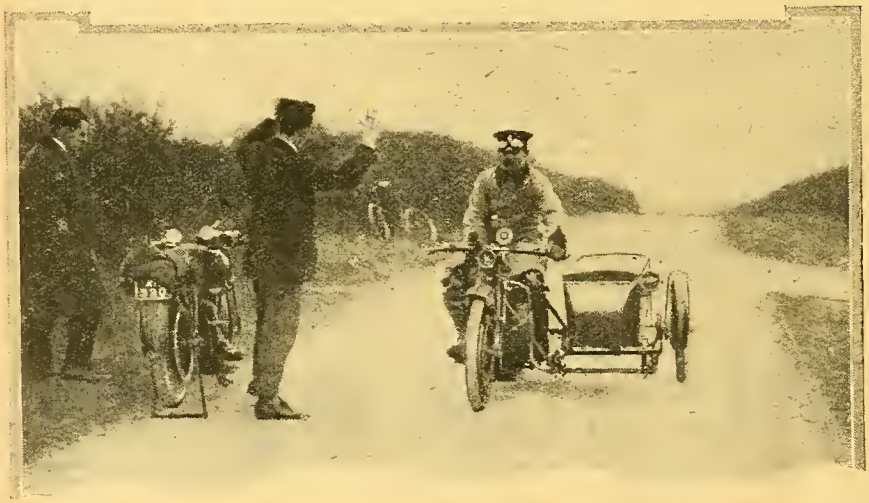
Single speed 2¾ h.p. Connaught machines are reduced in price from £45 to £39 18s.

### Spare Parts.

Readers in need of spares for Coulson-B. machines will be glad to know that the H.W.H. Engineering Co., 40, Old Town, Clapham, London, S.W.4, are manufacturing spares for this make.

### Free Maintenance.

Cash purchasers of new motor cycles, cycle cars, and cars from Collett's Engineering and Motor Works, Station Road, South Norwood, London, S.E.25, will receive the benefit of a free maintenance arrangement whereby carburetter, magneto, valve, and cycle part adjustments, and the fitting of any new part supplied under maker's guarantee will be carried out free of charge.



ROADSIDE AID. The R.A.C. has now introduced the sidecar as a means of enlarging the guide's field of usefulness. P. & M. outfits have been selected for the purpose.

### Carrying On.

In view of the recent sad death of Mr. Charles Binks, it may be stated that the carburetter manufacturing business of C. Binks (1920), Ltd., of Eccles, will be carried on by his eldest son, Mr. Harold Binks.

### Saddle and Tank Covers.

Change of address to 25, Deyncourt Gardens, Upminster, Essex, is announced by Mr. G. J. Coverly, whose combined saddle and tank cover we illustrated on page 265 of the issue of March 2nd. Deliveries will be available shortly.

### Spares by Air.

Urgently needed Zenith spares in Madrid were recently expeditiously delivered by the following method: The parcel (28lb.) was taken by motor cycle to Croydon, thence by air to Paris, and finally to Madrid by train. Carriage and insurance to Paris was only 10s. 10d.

### Ralphite Celluloid Reviver.

A sample of Ralphite Celluloid Reviver has reached us from Moss's Agencies of 20, Regent Street, Leamington Spa. It is claimed for this preparation that it restores celluloid to its original transparency, filling up the scratches without damaging the material in any way.

### Service Agencies.

With the growth of the motor cycle movement, improved methods of business relating thereto steadily develop. One strongly marked feature in this connection is the recognition by the best agents of the value and importance of service; there is now no room for the agent whose conception of business is to dispose of a machine and think no more about it or its purchaser. A trader who is endeavouring to extend service of his agencies is Mr. F. S. Whitworth, of Frank Whitworth, Ltd., New Street, Birmingham.

### Catalogues Received.

Burman and Sons, Ltd., Ryland Road, Birmingham: Leaflet describing the Burman countershaft gears in detail, and giving instructions and hints to users.

Barr and Stroud, Ltd., Anniesland, Glasgow: A leaflet giving an illustration of the Barr and Stroud sleeve valve engine and a reprint of a letter to the Editor of *The Motor Cycle* written in praise of this interesting engine.

The Astra Dynamo Co., Ltd., 110, Victoria Street, London, S.W.1: Catalogue listing Astra dynamos, lamps, accumulator cases, dynamo brackets, pulleys, dimmer switches, cut-outs, and horns, together with wiring diagrams.

Veloce, Ltd., Victoria Road, Six Ways, Aston, Birmingham: "The World's Appreciation of the Velocette." An interesting series of testimonials which testify to the reliability, economy, "go-anywhere" capabilities, simplicity, utility, and safety of the Velocette.

The Rex Motor Manufacturing Co., Ltd., Earlsdon, Coventry. Rex-Acme motor cycles: One of the most attractive features is an illustration showing a Rex-Acme sidecar outfit on *The Motor Cycle* Screw hill.

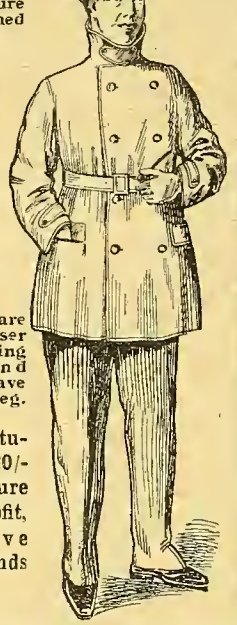
MANUFACTURERS' STOCK

MAKINKOT BRAND

*TO BE CLEARED.*

Fawn double texture, interlined rubber,

MOTOR SUITS



THESE suits are made of Fawn double texture cloth, interlined rubber.

The seams are cemented, sewn and taped, making these absolutely waterproof

Will stand any amount of hard wear.

The jackets are made double-breasted, with belts and wind cuffs.

The overalls are made on the trouser pattern, fastening with clips and straps, and have wind gussets in leg.

These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear.

Every suit is guaranteed absolutely waterproof, and should these not meet entirely with your approval, we guarantee to return your money in full, if returned within seven days.

SPECIAL PRICE,

29/11 Carriage 1/- extra.

We have also several thousands, heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemented seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof, and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The overalls are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

50/- Carriage 1/- extra.

¶ On March 16, R. N. Judd, of O'Donovan Motors,

**BROKE THE WORLD'S RECORDS**

for 1 kilo, also 1 mile, by covering the kilometre at the mean speed of 89.92 m.p.h., and the mile at 88.38 m.p.h.

(subject to confirmation by F.I.C.M.)

He also broke the 1 mile British Record by covering the distance at a speed of 91.3 m.p.h.

(subject to confirmation by A.C.U.)

*These figures beat all previous Records in classes C. and D, by about 5 m.p.h.*

¶ On March 23, at Brooklands, same rider and same machine broke the *kilo* record by covering the distance at 98.5 m.p.h. and the *mile* at 97.35.

(subject to confirmation by A.C.U.)

Previous best speed

For kilo was 93.44 m.p.h.
For mile 91.3 „

*All these Records were ELECTRICALLY, not hand, timed.*

¶¶ O'Donovan's service made these records possible. Concentrated mainly on the Norton machine, it can enable you to get the utmost out of *your* machine, whether new or already used.

¶ We tune up new machines for competition work free of charge.

*Write now for full details.*

1921 Watsonian Sidecar, Monarch, fitted child's seat in dickey, Easting, new condition; £19.—138, Bingham Rd., Croydon. [6837

LIGHTWEIGHT coachbuilt Sidecar, perfect, Scott purple, Dunlop, apron, luggage grid; £10, 56c, Birmingham Rd., W. Bromwich. [5931

SWAN Sports Sidecar, grey, 10 gns.; also old chassis, complete, sound, 30/-.—Letters, Rogers, Jun., 194, Southgate Rd., Islington, N.1. [6855

MILLS-FULFORD Coachbuilt Sidecar, Easting screen, luggage grid, lamp; £10; excellent condition.—51, Kendall Rd., Beckenham, S.E. [6635

RENNOC Sidecars, bodies, hoods, screens, largest stock in London, actual manufacturers throughout. Send for our catalogue, 32 pages, 80 illustrations.

PHŒNIX Sidecars.—All spare parts in stock by the Rennoc Sidecar Co.

RENNOC Sidecar Co. specialise in sidecars for Indian motors, with left-hand kick starters, and can deliver.

RENNOC Co. have 50 second hand and clearance sidecars, bodies, hoods, etc., all to clear at knock-out prices. Note: Write for special clearance list.

RENNOC Co. have the finest selection of complete sidecars in the trade.

RENNOC Co. undertake repairs to any make of sidecar, repainting and reupholstering a speciality.

RENNOC Co. have in stock sidecars to fit all makes, English and American.

RENNOC Co. again ask you to send for their catalogue, the most comprehensive issued by any manufacturers.

RENNOC Motors, Ltd., 155a, Marlborough Rd., Upper Holloway, N.19. 'Phone: Hornsey 1589 [2319

1919 Sunbeam Sidecar, C.B., complete with windscreen, hood, lamp, grid, good condition; £25.—Craswell, Wolsey Rd., Ashford, Middlesex. [6901

B.S.A.'s.—4-point coach sidecar; 2-speed clutch wheel, perfect; exhaust box, long nickled extension; offers.—143, St. Margarets Rd., Twickenham. [6420

£19/10.—Sandum 2-seater, bulbous back, 28×3 wheel, windscreen, apron, two electric lamps and switchboard.—Smith's, 86, Chalk Farm Rd., N.W.1. [6800

EXTENDED Payments accepted for sidecars; models for all makes.—Send for catalogue, etc., Rideezi Sales, Ltd., Atlantic House 103, Oxford St., London, W.1. [0829

TRIUMPH Gloria sidecar, new, not been used, fitted with hood, screen, and apron; price £38/10.—G. H. Layne and Co., Triumph Agents, Brigg. [6068

1919 Burbury, 2-seater sidecar, with windscreen, all quite new, Dunlop heavy tyre just fitted; £25.—Walbro Motorcycle Co., Saffron Walden. 'Phone: 45. [7219

COLLINS and Son for sidecars, new bulbous back models, complete with renovated underslung chassis, coverall apron, all fittings for any machine from £12/10.—Below.

COLLINS and Son.—2-seater bulbous back coachbuilt models with underslung chassis, all fittings, from £15.—Below.

COLLINS and Son have various models in stock to suit any machine; few secondhand sidecars in stock, cheap.—Below.

COLLINS and Son specialise in frame and chassis repairs; special chassis built to order; work guaranteed. Send for catalogue, or call. Open till 8.30 p.m., Saturdays till 5 p.m., Sunday mornings 10 to 12.—Collins and Son, rear of 84, High St., Putney, S.W. [5322

WILLOWBROOK Royal Leicester Sidecars, smartest designs, first-class finish; prices from 17 gns. Write for catalogue. Repairs undertaken, hoods, wind screens, etc.—The Willowbrook Motor Co., Leicester. [0335

1,000 Douglas Underslung Chassis, suitable for any make of machine to order, absolutely complete and renovated, as new; £5 each.—Old Man Hep. 19 Wilcox Rd., South Lambeth, London, S.W.8. 'Phone. 1958 Brixton. [8822

## Freak Hills in Trials.

RECENT trials indicate how important it is for the organisers to give full consideration to every detail of the route beforehand. There are two distinct and widely differing ideals to bear in mind, either a trial should be organised as propaganda for the motor cycle movement, in which case only such surfaces as would be traversed by the normal motor cyclist should be included, or the event may be of a sporting nature, when hills with freak surfaces and reasonably deep water splashes may be included without hardship or complaint.

In the event of a sporting course being chosen, intending competitors should be made aware of the fact before entering, and this precaution should prevent much of the grumbling which is too frequently heard at the present time.

Whatever the nature of the trial, however, the course which is chosen should be upheld, and it should be clearly understood that no amount of complaints will procure a modification of the published rules. There is plenty of room for trials of all descriptions, for, while the sporting element are apt to consider a straightforward trial a rather dull affair, it must not be forgotten that a long list of failures on a freak hill conveys to the minds of the buying public an entirely erroneous idea of the dependability of the modern motor cycle. Less than 10 per cent. of this public realise the nature of the surfaces included in some modern trials, and they are apt to be prejudiced against a perfectly sound machine which has failed to negotiate some obstacle which ordinary riders would scorn. The East Midland Centre, A.C.U., in particular, cannot have studied its trials route carefully, and the reported action of officials placing boulders on already ridiculous test hills requires prompt explanation. One wonders whether the A.C.U., as the governing body, is exercising its jurisdiction in the matter of freakish test hills. Experiences in the last three trials certainly indicate that it is time to call a halt.

Skilful riding plays an enormous part in modern competition work, a point which must be obvious to any spectator, and it seems hardly just to the manufacturers to place a premium on a commodity which cannot be bought by the prospective purchaser. But even skill plus a first-rate mount have proved insufficient lately, for luck, pure and simple, has been the governing factor when successes at all have been achieved.

## An Amateur Race in the I.O.M.

AS announced elsewhere in this issue, an amateur road race is likely to materialise. Due to the enthusiasm displayed by readers of *The Motor Cycle*, the Manx Motor Cycle Club has approached the Auto Cycle Union for permission to hold a two-lap race on the Wednesday between the junior and senior races in the Isle of Man, which has been sympathetically received.

Although full particulars of the race cannot yet be announced, the definition of an amateur will be based upon the article written by a member of *The Motor Cycle* staff which appeared in the issue for February 23rd, and a trophy has been offered by the proprietors of this journal.

Barely six weeks remain before the Tourist Trophy Races, which means that amateur speedmen who have sponsored the idea will have to decide at once whether they can support this event; but we have no doubt that among the 370,000 odd motor cyclists in this country there will be sufficient to make an interesting race. In the Isle of Man the project is being keenly supported.

An index to the advertisements in this issue will be found on the page facing the back cover.

# In the Centre of Paradise

Where all the Beauty of North Wales is Concentrated.

Llyn Ddinas, looking south—one of the most beautiful spots in Wales.

TO name one gleam of sunlight as fairer than the rest were perilously near attempting the impossible; so to choose one spot in any earthly Paradise for supreme commendation might expose one's selection to the criticism of the world; yet in all that wondrous wealth of wild glory that spreads about the hills and moors of Snowdonia our hearts are ever lured by an almost irresistible impulse to the lonely hotel standing at the foot of the Llanberis Pass.

Pen-y-Gwryd forms as choice a centre for rambles and explorations, for great climbs and roadway excursions, as one would wish to find.

Eastward the road winds and undulates through a four-mile valley to Capel Curig, with the hills piling themselves over green moors to right and left and in the valley bed the stream that, after many a musical waterfall and many a spreading pool, swells into the broad waters of Llyn Mymbyr at the Royal Hotel. Still further the road drops by graceful curves through wooded ways into the beautiful tree-clad hollow of Bettws.

### Grandest Pass in Wales.

Westward from Pen-y-Gwryd the road climbs steeply to the summit of the great pass, the wildest, weirdest, grandest pass of Wales; and from the top of Llanberis the footpath breaks away to the three lakelets and the summit of Snowdon. On this upward climb there are glorious visions of the lower hills to the east and the bare ridges and beetling crags across the Cwm; while, continuing the roadway, one enters the loneliness of the Llanberis Pass. Loneliness? Yes, for one only sees the Pass at its best in days of solitude and under threatening skies, when the winds are wild and the dark clouds hang about the frowning precipices. Spring and autumn are excellent for this mountain region, when the multitude is at home, and one is left alone to enjoy the mountains to their full and see the choicest visions that the land can give.

At the very door of the hotel the long descent southward into the Ddinas valley begins, surely the most beautiful mountain roadway in Wales, with a fall of 700ft. in three miles. This road is finely engineered and the gradient is never severe, while the way bends in graceful curves round the irregularities of the mountain slopes, presenting fresh aspects of the scenery at every turn. Across the green valley Snowdon stands serene and grand, its rugged peaks rising nobly above the scarred and broken crags and screes, while, lower down, the hillsides are cut and grooved with the flowing of the streams into countless shallow defiles.

The Afon Glaslyn flows from the llyn high up in the heart of the peaks, and passing through Llyn Gwynant traces the verdant valley almost at the roadside to join the waters of the lovely Llyn Ddinas.

A lake more exquisitely situated and more beautifully encircled with hill and forest and distant peaks it would be difficult to find.

### The singing Afon Glaslyn.

But the beauty of this way is far from exhausted at the shores of Llyn Ddinas, for the Afon Glaslyn, singing its way over a rocky bed, by ruined watermills, and under picturesque bridges, washes the walls of Beddgelert's houses, and then falls through the matchless splendour of the Aberglaslyn Pass.

The felling of many trees in the war years has not lessened the beauty of this pass; but on the other hand

**n the Centre of Paradise.—**

as made possible certain visions that were obscured efore.

Aberglaslyn is always beautiful, but the early spring nd late autumn with their wondrous colouring en-ich this glen with a magnificence not seen at other easons of the year; moreover, there is greater likeli-ood of heavy rains in these months, and, to be seen t its best, there must be the raging torrent working iiracles of power mong the great oulders of the river ed.

These are the oadways radiating rom this central pot, but the rambles ver the moors and ills are infinite in heir variety and harm, and the ombre scenery round the secluded wm-y-ffynnon away ehind the hotel and nder the shadow f the Glyders is ittle less than an nspiring revelation o those who see it or the first time nder propitious cir-umstances.

On the banks of Llyn Ddinas, a small but exquisite lake in the Snowdon range.

Across the lofty ridge of the Glyders lies the Ogwen valley with its wonderful views and its alluring climbs, with its wealth of solitary tarns hidden in the recesses of the hills, and its serpentine roadway trailing west to Bangor, the gateway to the Isle of Anglesey, and east to Capel Curig.

To have seen this district in the tourist season may be to have gained a deep respect for it, and a longing to return; and if the return be in golden autumn or in the gales of November, if it be when the world is silent under its white mantle of snow, or when the fresh life of spring is adorning hill and dale, that return will multiply enormously the sense of admiring appreciation; but one will be lingering merely along the threshold until at all seasons and under all conditions one has had the privilege of making acquaintance with what the writer firmly believes to be the most beautiful spot in the land.

# WEARING LEATHER.

## A Defence of the Leather-clad Misnamed Super-Knut.

FROM time to time there appear in print indictments against what it pleases certain writers to term the "super-knut."

They tell us he bestows lavish care upon his person, bedecking himself in much earnest in helmet, goggles, nd generally conspicuous clothing, while in many ases his mount is obviously lacking the most elemen-ary attention. That he may be recognised in any rowd as a motor cyclist, they would have us believe, s a crime in itself. They draw for themselves pic-ures of this indelicately equipped person, generally, e it said, grossly exaggerated, and then we are treated o a long dissertation on "making the countryside ideous with dense volumes of smoke and ear-splitting eports—all part of a plan to attract attention."

### T.T. Bars and Open Exhausts.

The necessary connection between wide T.T. handle-ars and a riding helmet, or even between an open xhaust and blue smoke, is hard to see. That nuis-nces do exist is not to be denied, and much to be egretted, but I very much doubt if the abandonment f the riding helmet, brightly hued scarf, etc., would roduce a wonderful change in the countryside.

Take the ordinary family man, who, far from being road-hog, is content, perhaps, with a comparatively ncient machine, and whose use of the roads is limited to week-ends. After his first two or three ventures in true November weather he decides that the ordinary cap, or soft felt, leaves much to be desired in the way of comfort when riding; that an upturned coat collar is hardly proof against the cold winds he is going to contend with; and again that something to augment the so-called freedom from mud which his machine affords, and at the same time maintain as warm limbs as possible, is very desirable.

### Leather the Most Suitable Wear.

For this man, if he is to equip himself for his job, as all other sportsmen do, naturally turns to articles specially designed and sold to meet his need, so we find him wearing leather fleece-lined helmet, woollen scarf, and leather knee-boots—and arrayed thus he becomes, automatically, a super-knut so called.

How would the sight of Tottenham Hotspur playing football in dancing-pumps or a cricket team playing in boxing-gloves appeal to these critics of ours? And yet the motor cyclist, because he is such, is to be precluded from equipping himself in accord with the requirements of his sport.

Again I say that the riding helmet does not have such a deleterious effect on the brain of the wearer as to compel him to ride a real hog-bus, famous for noise, smoke, and finding the killjoys. RENEVE.

# Complementary Pastimes

## Instances of the manner in which Motor Cycling Blends with other Sports and Recreations

WHILE participation in present-day motor cycle competitions may be regarded as sport—often very exciting sport, too—while evening runs or week-end rambles with no more definite object than "a breath of fresh air" in themselves form an engrossing pastime, and while to the mechanically inclined the very ownership of a motor cycle is a fully satisfying hobby, there are some who are motor cyclists mainly to aid their participation in some other entirely different form of recreation.

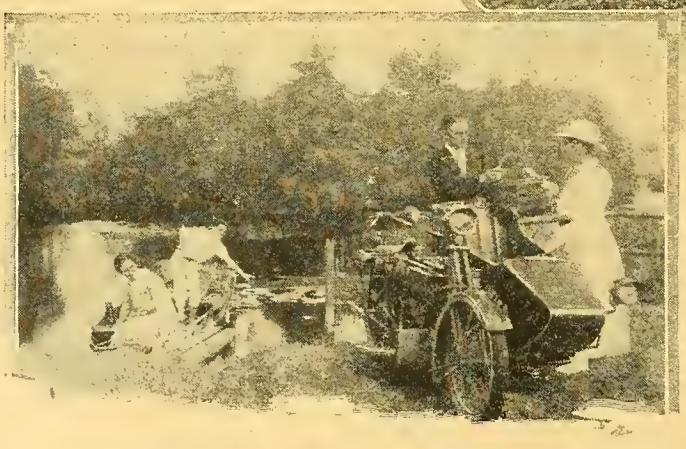
In the same way, many already enthusiastic devotees of the self-propelled two-wheeler eventually discover how simple it is to add yet a further interest, previously impracticable, to their spare-time occupation.

As a means of transport the motor cycle combines mobility with an extremely wide range of action to a greater extent than is in any other way possible. Therefore it would be surprising if it did not become the most popular help to the sportsman and the outdoor hobbyist in almost all his guises.

Whether the true motor cyclist needs another means of diversion is a matter upon which opinions no doubt differ. Probably it depends on the mentality of the rider.

The keener type of amateur who tunes his own machine and gains infinite pleasure from the task will scoff at the suggestion of a complementary pastime. Should he desire to vary his alternate spells of "tinkering" and testing the results of his labours on the road, he finds the acme of enjoyment in competing against his kind and even against the factory-assisted professional in his club's reliability trials or speed events. His literature is almost confined to *The Motor Cycle* and a bundle of well-thumbed motor cycle catalogues. There are thousands in this class; it would be a poor motor cycle club which could not boast a dozen or more.

Again, the family sidecarist or solo "potterer" often finds that the open road provides



River and sea cannot as yet be traversed by the motor cycle (although in the upper picture the sidecar body may also be used as a canoe), but the handy outfit often contributes its aid toward the enjoyment of a day afloat.

**Complementary Pastimes.—**

all the variety of scene and action and all the health-giving qualities which should form the basis of any outdoor amusement. Where the previous type is numbered in thousands, the present category runs into tens of thousands in Great Britain alone.

Some of us, however, perhaps inheriting Scotch blood, are attacked by the golf virus; others discover that the only "she" is a budding Suzanne Lenglen; or perchance we fall to fishing's quiet fascination—no matter which, or many more, the faithful mechanical steed remains a friend and quarrels not with the newer fad. Why? Because so adaptable is the motor cycle that it enhances the pleasures of any outdoor sphere of action.

Taking, as a typical example, the game which developed the "Plus Four" and enlarged our unwritten vocabulary, the convenience of being whisked back to civilised regions after a tiring eighteen holes instead of pedalling or tramping has to be experienced to be realised. And only a very small minority of the country's golfers live within two miles of their favourite links.

To a lesser degree this applies to tennis, football, hockey, or any other like athletic games for which Britain is so justly noted.

In the same way shooting—rabbit, pheasant, or clay-pigeon—may be more readily enjoyed by the town or city dweller if he possesses a handy means of transport for self and dog and gun to the country lanes. Which incidentally reminds us to deplore the fact that occasionally a motor cyclist brings his brethren into disrepute by practising that ever rampant vice, poaching.

MOTOR CYCLISTS AS ALL-ROUND SPORTSMEN.

Fishing and bathing are often inaccessible to those who most desire to participate. Happy solutions are suggested above, and, as a curiosity, the lower picture shows how two of the greyhounds were conveyed to a recent coursing meet.

**Complementary Pastimes.—**

In winter, speaking, of course, of winter as it should be—as favoured by the Christmas-card artist—the motor cyclist, and the sidecarist in particular, gets to the skating pond or toboggan run before the thaw sets in; in summer he arrives at the swimming beach or boating river before the rain. Ever-ready transport is invaluable in both cases.

The naturalist, the artist, and the photographer, too, enlarge their fields of action to limits bounded only by our island coast if they are fully mobile in the most convenient and least expensive way. There are ways and means for accommodating all the paraphernalia which participants in these hobbies find necessary to obtain the desired results.

In the left-hand bottom corner of this animated picture of a somewhat rare winter scene is the clue to how to get there.

Even the airman may make good use of the speedy road-machine as a tender to his official "bus," and, indeed, there is no reason why he should not ship it on his flights, as one or two have already done, and have a ready means of completing his journey wherever he lands.

To instance further cases would savour of repetition; enough has been said to prove that motor cycling may be complementary to 90% of the other outdoor recreations, whilst retaining all the fascinations of its own.

The modern motor cycle is so reliable and comfortable that its use in no way interferes with the "form" of the athlete, the tennis or cricket player, and anyone who has hesitated on this account should hesitate no longer.

# HIGHER PREMIUMS.

## Reasons for the Increased Cost of Motor Cycle Insurance discussed by an Insurance Official and Motor Cyclist.

THE announcement in our last issue that still higher premiums are to be charged by the leading insurance offices transacting motor cycle business came no doubt as an unwelcome surprise to most riders. I believe it was very unexpected by most motor cyclists, a reduction in premiums being looked for owing to the decrease in the cost of labour and materials, but they have the meagre satisfaction of knowing that were this not so the increases would be still heavier.

### Cost Based on Experience.

During the last year the collective experience of the offices has been bad, and business has been run at a loss. It is, of course, not to be expected that the companies will carry on any class of business at a loss, so the premiums have been advanced.

Many people do not quite realise the principles of insurance, strange though it may seem. The basic idea is, of course, that all who wish to be protected against monetary loss in the happening of a certain event or events pay into a common fund, which is to be *equitably* administered for the benefit of those who suffer. If certain of the insured are unscrupulous, and make bogus or inflated claims, or do not take reasonable care of the property they insure, then the amount in the pool will have to be larger than would otherwise be necessary, and if it is insufficient, then each person will have to pay a little more, and the fair suffer for the benefit of the unfair.

### A Mistaken Notion.

There are a number of people who imagine that insurance companies are little less than huge swindling institutions, and that anyone who can get the better of them by fair means or foul is doing a service to the community; but as a matter of fact, in normal years, after claims and administrative expenses have been paid, a very small proportion of the premiums received is available as trading profit and as reserve for bad years.

It should be the aim of every motor cyclist to take the greatest precautions against loss of or damage to his machine, and if everyone did so premiums would be reduced by reason of a less amount having to be expended in settlement of claims, to the mutual benefit of all concerned. The man who carelessly exposes his machine to fire, theft, or damage, saying, "It doesn't matter, it is insured," is doing himself and others a great disservice.

XYZ.

(15-16) **SOME BUYERS "GUYED."**—FURTHER SPRING FOOLISHNESS BY GORDON CROSBY. b 13

# OCCASIONAL COMMENTS

BY IXION

## "Daylight Screens" for Headlamps.

IT appears that Kodak, Ltd., of Kingsway, are the actual producers of the Wratten and Wainwright screen to which I was recommended for correcting the colour values distorted by the glare of our headlamps at night. A number of riders have complained to me that this colour distortion troubles them, especially when they are travelling over wet, tarred roads at night. The Kodak people explain that their screens are designed to correct acetylene or electric light for photographic purposes, and stop a great deal more of the light value than would be necessary with a screen designed for motor headlamps. The firm seems to be rather coquettishly inclined towards marketing a special motor cycle screen, and if anything materialises in that direction, I will give due notice. Short-sighted riders undoubtedly find night driving more exhausting since our roads were tarred.

## The Dry Sump.

I DON'T know who is to blame. Perhaps the war, with all its aero engine research. Perhaps that busy brainster, Granville Bradshaw. But anyhow, the dry sump type of motor cycle engine seems to be occupying a number of drawing offices. I don't suppose that many riders care a split-pin what sort of a sump their engines have, but the people who ought to know say that a dry sump engine will keep as cool as a cucumber up Applecross, will never gum up, and will run 5,000 miles before carboning becomes apparent. Personally, I relish one day's rest in seven, though I seldom get it; and I can quite understand that any self-respecting lubricant lasts longer if it is given an occasional holiday outside the warmish hurly-burly of the crank case. I only hope that the dry sump engine won't make any addition to the corrugated items which we have to clean at regular (or irregular) intervals; there are quite enough of them on my machines already.

## Easy.

REALLY, motor cyclists have the faculty of observation keenly developed—they must all have been boy scouts in their youth. If one person has asked me outside my favourite—er—garages, what happens when one valve of either pair on my o.h.v. Triumph gets ground in deeper than the other, seeing that there is no separate clearance adjustment in the operating gear, this query has been put by twenty riders. The answer is, of course, childishly easy. After grinding the valves you measure them; if one projects further from the head than the other, shorten its stem to suit. It seems to me that somebody must be trying to crab this very excellent engine. Next, please? The sparking plug? Ah, yes. Just a little patience; and mind you don't lend or otherwise lose the two special spanners. But personally, I consider that the ideal position for a sparking plug is as this one, jammed right under the top tube guarded by four valves. Why? Certainly; because you can leave the machine out in the rain all night, and not a drop will get on the plug, while you can't oil it up if you use a B. and L. mechanical pump instead of the old-fashioned hand type.

## Stagnation in Carriers.

WHEN I buy a three-and-sixpenny carrier for my pushbike, I find it ready fitted with straps passing through slots in the metal; the straps may often be of a deplorable quality, but at least it is possible to attach luggage rapidly and securely, and the substitution of a pair of good saddler's straps puts me at peace with all the world. On the other hand, when I pay upwards of £100 for a motor bicycle, I find that the manufacturer is usually a generous fool. Generous, because he throws in a carrier free, gratis, and for nothing. Foolish, because he carefully designs that carrier to give me the maximum amount of exertion and annoyance in the using thereof. I use it firstly and most frequently to haul my ponderous mount upwards and backwards on to its stand; but there is seldom a nice grip anywhere on the tailbar of the carrier, and I abrade my delicate fingers on the sharp edge of a number-plate or the bolts securing the same. I use the carrier, secondly, to transport luggage. It has no straps. It has no slots or cleats to take straps. There is seldom any clearance (worth mentioning) between the panniers and mudguard on the one hand, and the carrier tubes on the other hand. Supposing I succeed in finding a strap as thin as court plaster and as tough as rhinoceros hide, and coax it into position, the bare tubes of the carrier provide no longitudinal stops to hold the straps nicely spaced apart. They gravitate towards the centre of the platform, and make my modest Japanese basket look like a Christmas cracker with two waists. Then my flapper . . . but here Tan-Sad comes to the rescue. In the other items, may we have a little more ingenuity?

## Use or Ornament?

I ALWAYS feel rather shamefaced when I attach certain items to a motor bicycle designed to be as much a thing of beauty as the Arab steeds which scorchers of a previous epoch scared pedestrians

**Occasional Comments.—**

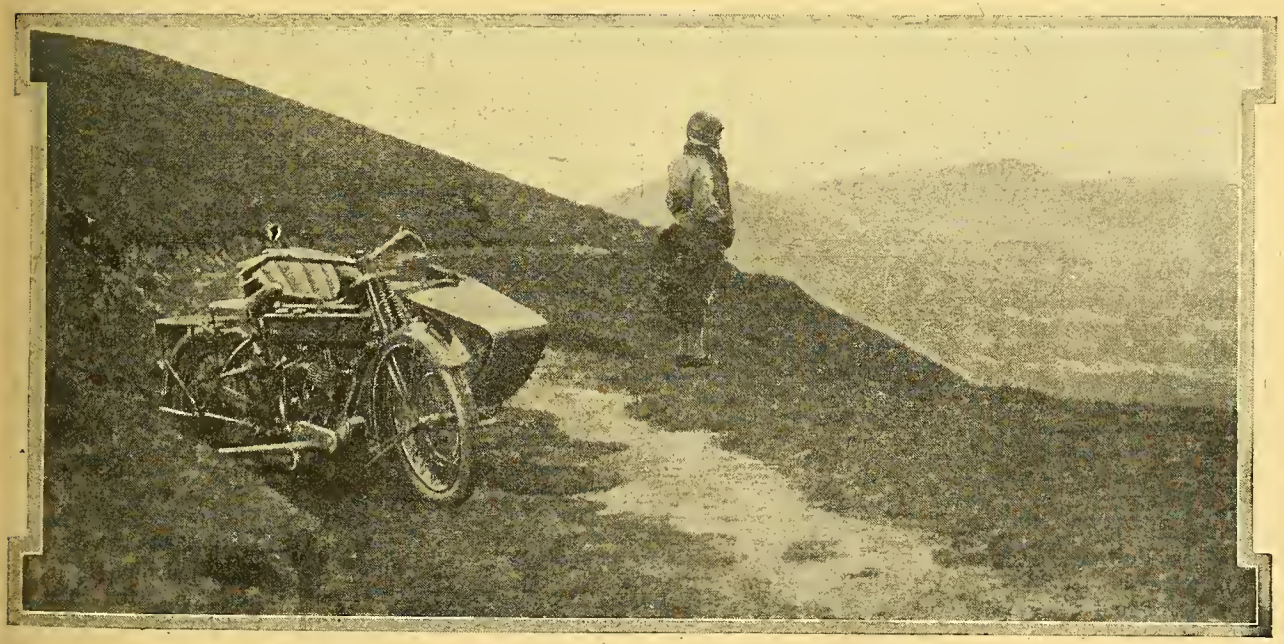
with. For example, it is an insult to a Norton to strap a Japanese basket full of underclothing to its carrier. So it was not without compunction that this winter saw a pair of John Bull-handle-bar muffs fixed to my handle-bar. Their undeniable ugliness is more than balanced by their extreme efficiency. Weighing under 2lb. the pair, they are very easily installed, and permit such a chilly mortal as myself to ride bare-handed in quite severe weather, and to find light gloves really cosy in a snowstorm. They are a fine instance of that rare article, a pluperfect accessory. Two wire-rimmed cylinders, covered with waterproof leather, they are big enough in the bore to allow easy operation of the control levers, with rubber ends flexible enough to slide over the grips, yet locking the muff firm in position, and forcing it to keep its shape. Incidentally, the lining has given a notion for making money. It is of blanket, camouflaged to look like leopardskin. I understand that the modern Kaffir is a degenerate individual, eager to swank in a leopardskin, but too timid to adventure himself in the jungle. I shall hie me to Africa, and enrich myself by selling sham leopardskin to degenerate Kaffirs.

### "Obsolete" in 18 Months.

A PARTICULARLY short-sighted and scandalous instance of bad trading methods has just been brought to my notice by a Sunningdale reader. He bought a new lightweight of reputable make in September, 1920. In February, 1922, an overhaul revealed that the flywheel half of the crankshaft was seriously damaged, either by the fracture of a roller or through some hard foreign substance entering the race. He applied to the makers for a spare, and under date of February 28th, 1922, received a letter from the manager of the repair department to the effect that his crankshaft was "obsolete" (!), and suggesting the purchase of a new model shaft, complete with crank pin, both halves of shaft, and rollers, for £3 5s. As 15s. is approximately a normal charge for half a crankshaft, it will be seen that this firm's failure to maintain a proper supply of spares has cost my correspondent a sum of 50s. The firm's letter contains no apologetic matter whatsoever, and adds insult to injury by admitting that the "probable" cause of the crankshaft trouble was a faulty roller. I need hardly say that under similar circumstances most British firms would instantly offer free replacements, and that the more churlish catchpenny type of concern would at least apologise for their inability to supply spares and forward the new model shaft complete at the figure chargeable for the old pattern. It is the worst case of silly and mean trading which I have encountered in my long experience. If this paragraph comes to the attention of the firm concerned, I trust they will even now make amends.

### Mending Unpuncturable Tubes.

NO, I'm not Irish. But I suppose that when an inventor terms his patent tube "unpuncturable" he doesn't necessarily mean that an I.R.A. bullet or a broken beer bottle on the road might not administer a temporary quietus. Anyhow, several readers enquire whether the Jeff and Challenger tubes can be mended if the incredible occurs and some fearsome puncturing instrument should get them where the hair is short, so to speak. The Jeff is repairable in exactly the same manner as an ordinary tube. The original pattern of the Challenger tube was, I believe, not very difficult to mend by hand, but awkward to vulcanise. The current edition has a thickened outer skin of red rubber on the tread side, and can be patched like any other tube.



WHERE THE WESTERN WINDS DO BLOW. An early spring scene on the breezy slopes of the Malvern Hills, Worcestershire, where an error of judgment in steering up the narrow pathways might lead to dire results.

# The Cheapest Transport for TWO

by Road Rider

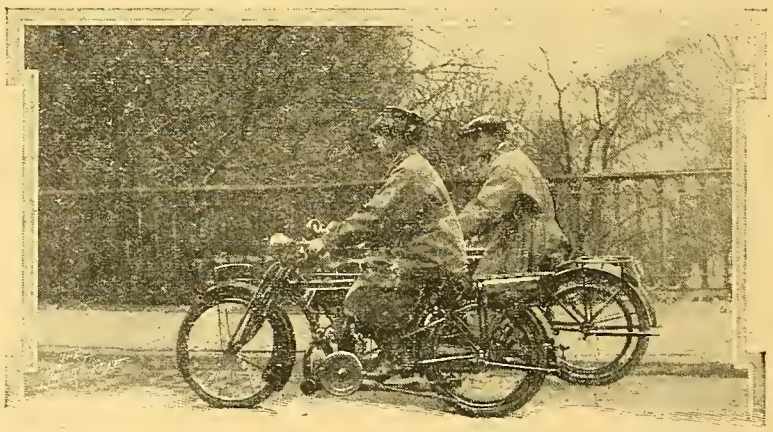
## Discussing the Most Economical Methods of Providing for Two People—with one Revolutionary Solution to the Problem.

Three most economical methods of transport for two: Pillion riding, the lightweight outfit, and the "big single" sidecar.

PASSENGER motor cycling on limited means is the thorniest of all the perplexities which beset the intending purchaser at this time of the year, and a few notes may enable worried readers to cut their Gordian knot. The choice—at what motor cyclists would regard as a really low figure—is as follows:—

(1) Pillion (new or second-hand bicycle).
(2) Bijou sidecar (second-hand outfits scarce, but sidecar may be attached to second-hand bike).
(3) 500 c.c. sidecar (new or second-hand).
(4) Second-hand high-powered sidecar or cycle car.
(5) Two two-stroke solo mounts.

The first alternative takes us down to extremely low figures. For about £45 it is possible to get a really first-class lightweight with two- or four-stroke engine, clutch, kick-starter, and two- or three-speed gear, and the second-hand market provides plenty of choice. The question of new *v.* second-hand bobs up thus early for consideration. There are only two methods by which a novice should approach the purchase of a second-hand machine. The first is to buy a mount from a skilful friend, when its whole history is known to the buyer. The second is to trust an honest dealer, if identifiable. It is curious that a man who is ignorant of horses or cattle would not dare to buy a beast from a stranger, trusting to his personal acumen, whilst breeders and farmer often insist on a vet.'s guarantee; but lots of people will buy complex machinery from entire strangers in simple faith.

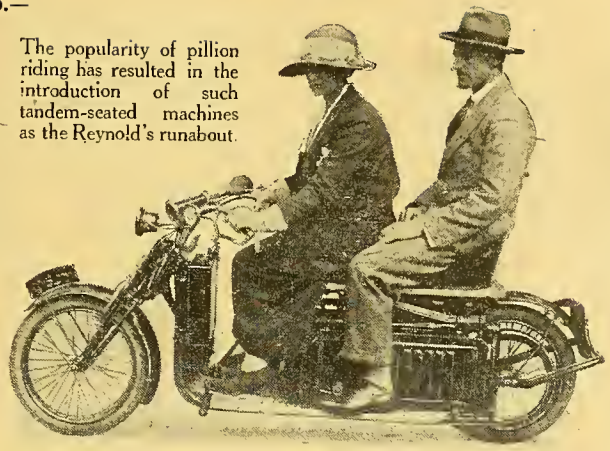


Many couples prefer separate solo mounts to using one sidecar, and there are not a few points in favour of the idea.

Taking the wise precautions for granted, what is to be our verdict on a 250-350 c.c. pillion mount? According to the wiseacres, pillion riding is the most dangerous form of motor cycling. It is seen at its worst when a light machine is in question, for the tail leverage reaches its maximum when the bicycle is very small and light.

**The Cheapest Transport for Two.—**

On the other hand, many riders cover a big mileage without accident. It is obviously the least comfortable mode of transport for a woman, although I expect that this will be denied. Technically, pillion riding is less severe on the engine than even a miniature sidecar, and permits the couple to travel almost anywhere. Lightweight machines, ridden solo, will go anywhere; with an extra passenger, the worst that can happen is for the passenger to walk a very severe hill once or twice in the season.

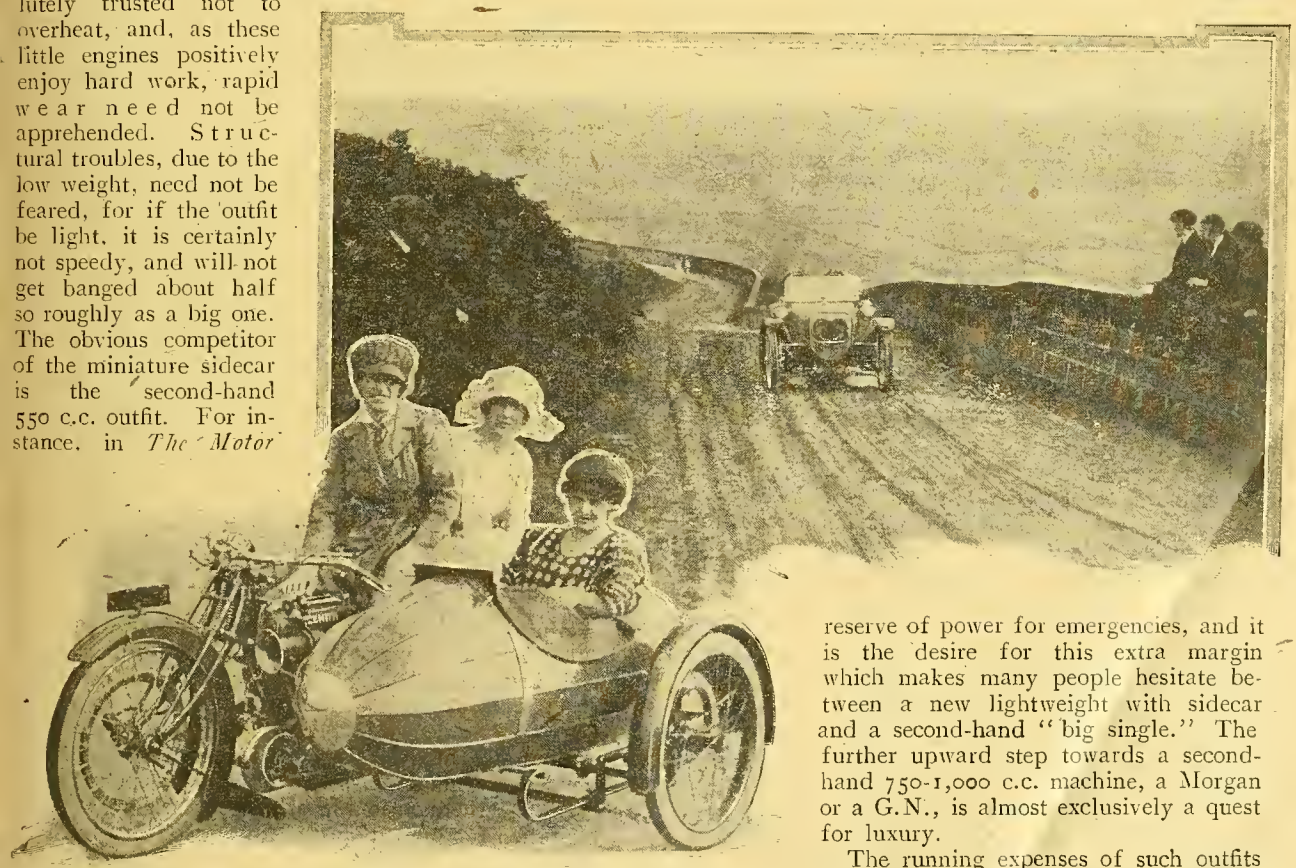


The popularity of pillion riding has resulted in the introduction of such tandem-seated machines as the Reynold's runabout.

The bijou sidecar plainly promises far more comfort than any pillion seat, and, theoretically, is safer. It will be slow. Its climbing limit in ordinary hands is probably represented rather by a hill like Dashwood than by Sutton Bank; but there are very few Sutton Banks on main roads, and they can always be dodged by a detour. Air-cooling is so efficient nowadays that the little sidecar machine can be absolutely trusted not to overheat, and, as these little engines positively enjoy hard work, rapid wear need not be apprehended. Structural troubles, due to the low weight, need not be feared, for if the outfit be light, it is certainly not speedy, and will not get banged about half so roughly as a big one. The obvious competitor of the miniature sidecar is the second-hand 550 c.c. outfit. For instance, in *The Motor Cycle* of February 2nd I find that the average price put on a 1920 Triumph sidecar is £87, whilst 1921 models average £110. If these outfits are fully equipped and in sound order, they are as cheap to buy as almost any smaller sidecar, are not vastly more costly to run, and are more adequate for touring purposes. The tax is a little higher, but the depreciation will be, if anything, rather less, and the loss of interest on capital will be similar. Insurance will be slightly heavier. The second-hand 550 c.c. is really the better proposition from a technical standpoint, and the bijou sidecar exists, first, because so many people prefer something which is brand new, and, secondly, because some buyers lack the confidence or skill to adventure their cash amid the pitfalls of the second-hand market.

The second-hand high-powered outfits and cycle cars present rather a different problem. As soon as 500 c.c. is reached, the rider will possess a reasonable reserve of power for emergencies, and it is the desire for this extra margin which makes many people hesitate between a new lightweight with sidecar and a second-hand "big single." The further upward step towards a second-hand 750-1,000 c.c. machine, a Morgan or a G.N., is almost exclusively a quest for luxury.

The running expenses of such outfits are quite appreciably heavier than those of the simpler specifications, and I do not advise any impecunious person to



One obtains more comfort and a greater reserve of power with a fully equipped 8 h.p. sidecar or three-wheeler; but naturally one has to pay for these advantages in increased upkeep costs.

**The Cheapest Transport for Two.—**

plunge on unnecessary horse-power. The extra horse-power is, however, hardly a luxury where really heavy loads are concerned. If it is vital that two children or a third adult, probably *plus* luggage, should be carried on occasions, 750 c.c. or even more is distinctly desirable. A prohibitive load robs a 550 c.c. sidecar of all its life on the flat, slows it down terribly on the level, especially against a head wind, and makes all the difference between success and failure on crucial hills.

**Upkeep of Big Machines.**

At the same time, it must never be forgotten that any machine with a 1,000 c.c. engine is getting perilously near the small car scale of maintenance charges, and that between the more economical forms of motor cycling and owning a car there is fixed a great financial gulf. It is very rare for any man of moderate means to wish he had bought a more extravagant vehicle. It is common for people to sell motors because the running expenses are too heavy a tax. Every temptation is in the direction of buying something too big for one's purse. It is astonishing what pleasure a contented mind can extract from a simple motor which is not very "posh," not very big, and not very fast.

**And now the Modern Way.**

A few owners are adopting quite a novel policy this last year or so. They have noticed that the lightweights are becoming very good indeed. It is possible to buy two first-rate second-hand solos with liberal specifications for about £75, and a brace of good new examples for £100 or very little more. Quite a number of young couples have purchased two small bicycles instead of one big bicycle and a sidecar. Such a pair of machines makes an excellent stud for conjugal touring, and in local work round the home it is infinitely more convenient than any one-piece two-passenger outfit. What husband is not weekly victimised by having to ferry his wife to attend dull functions or visit dull people? The brace of two-strokes permits man and wife to go their several ways on such petty occasions, and to travel together when so inclined. Of course, you cannot very well convey small olive branches on the pillion, and the luggage accommodation is none too good. But I know many young couples who consider that a pair of bikes is easily the best solution of a harassing problem.

# RADIATION OF HEAT.

## Notes on the Cooling Effect of Black Paint on Air-cooled Cylinders.

"WHY is blacklead advocated for cylinders? Why not white or aluminium paint?" asks a reader.

If my memory is not at fault, the cylinders of the T.T. A.J.S.'s were copper-plated and finally blackened. This question is fully explored in that branch of physics called heat.

Heat can be transmitted in three different ways: (1) By conduction. If one end of a poker is put in a fire, the other end will also become hot. This is conduction, as the heat is literally "conducted" along the poker. (2) Convection. In the case of convection, however, the actual substance which is being heated moves, carrying the heat with it. An example of this is central heating. Water is heated in a boiler, and flows through the various pipes and radiators, carrying heat with it. (3) Radiation. If we hold our hands below a red-hot bar of iron, we feel the heat from it. The heat has reached our hands without the aid of any exterior means.

In motor cycle engines of the air-cooled variety heat is carried by conduction from the interior of the cylinder to the outside wall, and there dissipated to the surrounding air by radiation.

**Simple Experiments.**

As the following simple experiments will show, much depends on the surface of the radiator.

Take a piece of sensitised paper, and in the centre of the unsensitised surface paint a square of a dull black colour. The rest of the paper paint an aluminium colour. When quite dry, bring it near a source of heat. It will be noticed that that part of the sensitive paper directly behind the dull black colour becomes much darker than that behind the aluminium surface. This shows that the dull black colour is a better absorber of heat than the aluminium. The following experiments will prove that good absorbers of heat are also good radiators.

The first experiment is performed with an instrument known as "Leslie's Cube." This is merely a cubical tin in which the four vertical sides are prepared as follows: (1) covered with lampblack; (2) polished grey; (3) painted white; and (4) brightly polished. A thermopile is placed about 18 inches from it. The thermopile consists of several pairs of rods of the metals antimony and bismuth, arranged alternately. If the ends of the series of rods are joined by a wire and the junctions are heated, a current of electricity is generated. A sensitive galvanometer detects the passage of the electricity, and by its deflection the relative amount of radiant heat falling on the junction is measured. The cube is kept at a constant temperature by passing steam or hot water through it, and the different surfaces are tested. It will be found that the polished tin radiates the least, the painted white next, then the polished grey, whilst the surface covered with lampblack is by far the best radiator.

Perhaps the following is a more conclusive experiment. Two tin castors of equal size are taken, and one is brightly polished and the other thickly coated with lampblack. A thermometer is placed in each, through a wooden lid. Pour an equal amount of boiling water in each tin, and at the end of a short time, say ten minutes or so, note the thermometer readings. The thermometer in the lampblacked tin will have fallen far lower than that in the polished tin.

From the preceding experiments it is fairly evident that a dull black surface radiates heat far quicker than a polished one, therefore we need have no fear about blackleading our cylinders. E. N. J.

# The Real Worth of the Motor Cycle.

Fallacy of Always Counting the Cost in £ s. d. and Letting Good Times Go By.

THERE are many people reading *The Motor Cycle* who are like David Harum when he was a youth. They don't possess a sidecar outfit, but they want to own one badly. David wanted a silver tobacco box badly, but he kept on waiting and waiting. No doubt everybody who appreciates humour will have read his discourse on the subject of waiting too long before buying a much-desired article.

David, after taking twenty years to make up his mind to buy a silver tobacco box, says:—"I don't mean to say that I didn't spend the wuth of it foolishly time over an' agin, but I couldn't never make up my mind to put that amount o' money into that pertic'ler thing. I was always figurin' that some day I'd have a silver tobacco box, an' I sometimes think the reason it seemed so extrav'gant an' I put it off so long was because I wanted it so much. Yes, sir," says David, "I never spent a small amount o' money but one other time an' got so much value, ony *I alwus ben kickin' myself to think I didn't do it sooner.*"

When it is suggested that David probably enjoyed it all the more for waiting so long he says:—"No, it wa'n't that—I dunno—twas the feelin't I'd got there at last, I guess. Fur's waitin' fer things is concerned, *the' is such a thing as waitin' too long. Your appetite 'll change, mebbe.*"

### Procrastination.

And so it is with the man or woman who reads religiously the big advertisements of *The Motor Cycle*, then scans the "Smalls," picking out the bargains. But he doesn't buy. He keeps waiting, week by week, month by month, not thinking that his "appetite 'll change, mebbe." Sometimes the waiting is inevitable, just as it was in that blissful age when we lost interest in stamp collecting and push bicycles and succumbed for the first time to a fuller passion for the petrol engine, longing, as we have never longed for anything before—or since—to possess a machine. The waiting in those days, as I have said, was inevitable, but we appreciated their worth well enough.

But there are readers who this very moment desire to buy and who have the money to buy, yet refrain from doing so from mercenary motives. These people think that prices will drop, and are waiting for that time. But they do not appreciate the fact that they are failing to take advantage of one of the greatest health-producing devices invented by man. That is saying a great deal, but it is undoubtedly true. Owners of machines who have always possessed abounding vitality may say the statement is *probably* true, for, motor cycle or no motor cycle, these lucky people always feel fit, motor cycling not adding to their well-being except to give more exhilaration and excitement to their lives. There are those, however, who seldom feel fit, whose general condition is C3, and who, before taking up the motor cycle, ambled through life with the doubtful aid of pills and capsules, spending enough on these nerve tonics and revivers to run a motor cycle.

### Value.

The real worth of the motor cycle cannot be measured by pounds, shillings, and pence, and if one's nature is so constituted that every farthing spent must return its full value in something tangible, then the only pastime to be recommended to these people is walking, and even then there is boot leather to be considered.

Take it that a man is able to afford £100 to £150 for an outfit or solo machine, and that the general upkeep will not affect him appreciably. What does he and his family stand to gain or lose by the purchase?

Although a chartered accountant might not pass the following balance sheet, I think the items are fairly represented, although there is a big blank on the debit side that augurs badly for that side of the column.

| *Debit.* | *Credit.* |
|---|---|
| Interest, running costs, and depreciation of a 5-6 h.p. sidecar, 15s. PER WEEK. | Freedom of the "Great gay road." |
| N.B.—Details need not be given, the figure being near enough to the mark for an average rider. | Access to the beauty spots of Great Britain which otherwise might be missed on the score of railway and travelling expenses. |
| | Feeling of independence in travel. |
| | The possession of a vehicle ready to travel any distance. |
| | A greater appreciation of one's own beautiful country. |
| | The health-giving propensities, which are unquestioned. |
| | Always something to look forward to. Anticipation, inspired by thoughts of the next drive. |
| | An interest in life that must be health-giving—a stimulant that doesn't let one down. |

One could add indefinitely to the credit side, but the specifications given are sufficient to show that those who hesitate buying on the score that it won't "pay them" are labouring under a fallacy, even though the machine be purchased purely for pleasure. FRIAR JOHN.

# PASSENGERS, FAIR AND OTHERWISE.

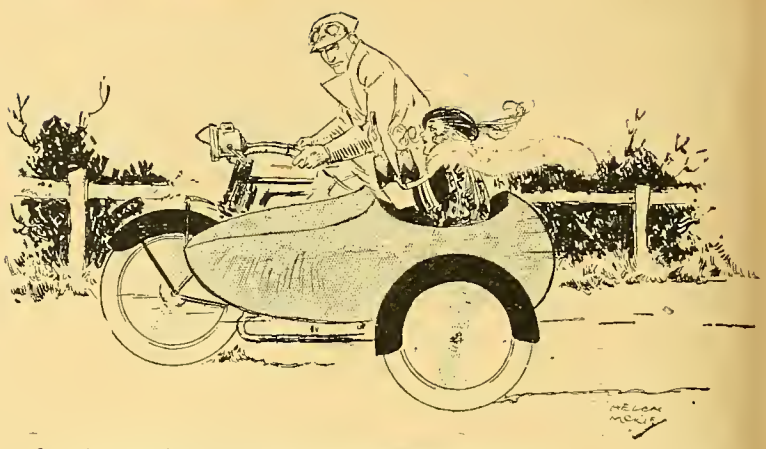
## Our Partners, Active and Passive, in the Joys of the Road.

By Ixion (Illustrations by Helen McKie).

HE was one of those benevolent gentlemen who attend the principal motor cycle trials and present free tins of Somebody's oil to any competitor who will sign a bond to use no other. It fell to my lot to arrange transport for him over the route (I didn't quite see why he need cover the course at all, but perhaps he was afraid one of his riders might seize his engine, and that help might be needed to frame a cause wholly divorced from lubrication). Anyway, I told him ruefully that all the cars were full; but perhaps I might find him a seat in a sidecar. "I am very particular," quoth the oily one, "whose sidecar I ride in." I warned the intended driver that the passenger was fastidious. "Yes," roared the angry driver, "and I am —— particular who rides in my sidecar."

I quite agreed with the driver. My sidecars have conveyed all sorts and conditions of men and women. I will not generalise dogmatically about the ideal passenger. Dirt, as the poet said, is matter out of place. On a sunny day in August, when one is trying to make all other motor cyclists Castrol colour with envy by driving a Brough Superior outfit (o.h.v., of course) up and down the front at Brighton, Miss Tottie Plantagenet, of the Frivolity *revue*, attired as only she can attire herself, is unquestionably the goods. So, too, when the latest 1922 outfit is being photographed for our "Road Test" series (unless, indeed, Mrs. Ixion has any evidence that I executed the particular road test concerned). But in a London-Exeter, Miss Tottie Plantagenet would be—well, matter out of place. I have the warmest possible memories of my passengers in trials. Dear old Bill, for example, bless his heart. When two of the sidecar connections fractured near the Cockbridge Ladder in the 1888 Scottish Six Days, did not Bill manfully volunteer to carry the sidecar wreckage across six moors and three lochs to the nearest railway station whilst I rode the rest of the "bus" solo, completing the course and duly securing my gold? There was one brief but awful period during which the A.C.U. got too big for its boots and actually forced all trials entrants of passenger machines to put the second seat at the Union's disposal, and they filled it with nasty hybrid creatures resulting from the cross between a theoretic engineer and a female spy—William le Queux brand. These noisome reptiles strolled up to us in the official garage at the start, ignored us as if they were duchesses and we were hired chauffeurs at a society wedding, deflated all our natural pride in our mounts by remarking audibly that they would jolly well see the secretary put them on something decent next time, waited expectantly till our inevitable troubles began, and then made voluminous and damaging notes in a fat journal, standing in attitudes of detached and dispassionate observation whilst we sweated in the sun to coax a bang out of the silent engine.

"One of those benevolent gentlemen who attend the principal motor cycle trials and present free tins of Somebody's oil."



"In a London-Exeter run Miss Tottie Plantagenet would be . . . out of place."

### The Perfect Passenger.

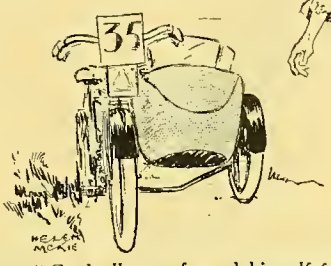
Contrast the behaviour of dear old Bill. My engine had hardly conked in a big trial before he was overboard, ripping out the tools. The repair complete, Bill performed feats of legerdemain as I tore along at 40 miles an hour. First of all he would carefully pack up all the kit again. Then he would gradually transform himself from a cursing, shirt-sleeved fiend into a respectably camouflaged motor cyclist, complete with helmet and goggles. At the next check Bill would convince the most flinty hearted checker that the official watch had gained ten minutes; whilst I replenished the tank; and as soon as we were off, I would feel a nudge in my ribs, and there would be Bill holding up a *pâté de foie gras* sandwich and a bottle of Bass, incredibly commandeered whilst a hundred hungry men were threatening to pull down the hotel or lynch the head waiter. Pushing; co-operative; energetic. Bill was the man to have aboard in any emergency. If I'd ever run over a policeman, Bill would have disposed of the carcase inside ten minutes, and even the Big Four of the Yard would never have solved the disappearance.

**Passengers, Fair and Otherwise.**—

Ginger, now flying near Bagdad, was equally great in a very different way. His *forte* consisted of monosyllabic inspirations, for he was a taciturn lad whose brain moved slowly but surely. For example, one day he and I were burbling down the Great North Road. Something was amiss somehow. The sun was balmy. The 'bus was running like a clock. There were no police about. Our Edinburgh medals were safe in our pockets forty-eight hours before. Yet, like the fabled person seated at the organ, I was weary and ill at ease. Some *je ne sais quoi* disturbed my interior peace. Though I had miles of straightish billiard-table surfaces before me, I felt too low to open the throttle.

### Monosyllables.

Suddenly Ginger elbowed me in the ribs. He pointed to the left with his other hand, and ejaculated the one word "Golf!" I spied to the left a board with the legend "Doncaster Golf Club." We swung in, hired two sets of mouldy old clubs from the local marker, and when we emerged two hours later, the haunting *malaise* was gone—I could open my throttle with a glad heart. Or, again, one evening we were halfway through a hundred-mile spin, when rain began to fall heavily. I cursed and Ginger grunted sympathetically. In a mile or so we approached a potty little village, unknown to me. Again that inspired elbow in my ribs. "Beer!" he murmured. Beer it was. A well-known authority has publicly stated that there is no bad beer; but if there can be degrees in perfection, the beer of that unknown village came nearest the nectar of ancient fable. Ginger was a man of acute understanding. The only time we came near a quarrel was on another cold night—too cold for beer, and I thought he had said "Beer." It turned out that he had really said "Beef!" which was correct under the circumstances; we turned into the little inn, and got two fillets of undercut, all pink and oozy.



"Gradually transformed himself from a cursing shirt-sleeved fiend into a respectably camouflaged motor cyclist."

One of my colleagues, X, has never really loved sidecars since a side wheel became detached under him some years ago; it ran on ahead, and hit the fence not quite hard enough to make a gap for the sidecar, which fetched up at the same point a few seconds later. Since then my colleague has been a somewhat queasy person to have on board one's outfit. So I was all the more pleased when his solo mount let him down in a big trial last year. We begged a seat for him in a sidecar driven by Jones, a stranger to him, but not to us. I rode behind the pair to mark the progress of the conversation by the elevation of X's back hair. Jones's opening never varied that summer. It ran as follows—

Jones: I haven't driven a sidecar since 1914.

X: Indeed? (tail of his cap rises ¼in.).

Jones: No; I stopped one at Aubers, and I've got shell-shock.

X (gurgles unintelligibly; peak of cap lifts perceptibly).

Jones: It brought on neurasthenia, and the doctors seem to think I get worse every day.

X: Would you like me to drive for you? (his cap blows right off).

Jones: It doesn't matter. I think I see a pub. I shall be better when I've had a glass and a chaser. (N.B.—Jones has had umpteen "glasses and chasers" already.)

### Talkative Ones.

I particularly detest talkative passengers. Of course, it depends what they say. One day at a big meet somebody asked me to give a lift to a nice little thing who lived a mile or two down the road. At the first blind corner a motor coach nearly juggernauted us. I did rather a nice there-and-back skid, and just as I cleared the great lumbering obstruction I said something rather pointed—no swear-words, you know, just a few cutting words about prehistoric hearses. Presently a silvery little voice tinkled in my ear, "Mr. Ixion?"

I gazed down into two large pools of delphinium blue.

"I do *so* admire presence of mind!"

I never saw her again.

But some talkative people are the limit. Once in a Scottish with a bent fork and rather rickety sidecar connections I was negotiating that nasty road along Loch Lomond. My exhaust was practically open, and the idiot I had aboard had evidently seen *The Motor Cycle* for the first time the night before. He was trying to impress me with his technical knowledge. Indecipherable bellow from him. I shut off the engine, and daringly take my eyes off the narrow twisty road for a second. "Wh-a-a-at?" Repeat eight or ten times on both sides. Finally I elicit that he wants to know if my engine is fitted with drilled steel pistons. Being a single-cylinder, it only has one piston, which happens to be cast-iron, and has a large piece jagged out of the skirt, so that the less I am reminded of it, the better I am pleased. Presently we interchange a further series of muffled bellows. It transpires anon that he considers my brakes excellent. I lose my temper and untruthfully remark that I've only got one, and that its thread is stripped. More bellows. Apparently he wants to know if that isn't rather dangerous. "Very," I retort briefly. Conversation closed *pro. tem.*

Lady passengers vary from the sublime to the ridiculous. The parcel lady is the type which all good motor cyclists most abhor. She may be an aunt. In that case, excessive opulence is her sole justification. She may be Juliet's mother—none but the brave deserve the fair. But she is never a likeable person. She usually giggles. She considers the chair is so small. "Can't you leave those funny hard things in

**Passengers, Fair and Otherwise.—**

the bottom behind?" (how can one go out minus a tyre pump and a jack?). Are we sure it is clean—these motor cycles are so often oily? Why hasn't our sidecar got a dinky little hood, like young Jacomb's? Do we know Mr. Ambler? He has a *car*. It is a Rolls-Royce. She often goes in it. It doesn't bump. It is as quiet as an electric launch. It doesn't sway round corners. There is room in it for seven persons.

### Unwelcome Oddments.

When she gets out courage is required to investigate the sidecar. She has probably left a paper bag of over-ripe plums or tomatoes in the footwell. Never turn your back whilst such a person is fussing round the sidecar. The mother—I think it was—of quite a nice girl once put six bloaters wrapped in newspaper in the well under my sidecar seat, and forgot them. I did not find them till I had a puncture some weeks afterwards. So, on the whole, it is best to investigate as soon as you have disposed of the passenger.

It is popularly supposed that the ripening flapper is the genuine *raison d'être* of the popularity of the sidecar. The unripe flapper goes, of course, on the carrier. Two or three years later one's salary is rising, matrimony is on the horizon, and a fractionally more mature flapper rightly merits better sitting accommodation. Well, I share the universal weakness for—something frilly, it was a few years ago; now, I suppose one must say, leggy objects with incredible figures, jumpered in impossible colours. But you know that when that mood is on us, we temporarily cease to be worthy members of the motor cyclists' fraternity. Speed, the road, sport, and scenery temporarily lose all their magic for us. During this mad moment the centre of the universe for us is a female thing whose most pronounced faculties are a greed for indigestible confectionery, a capacity for spending more than anybody ever earned, and a rapacity for admiration. In my private opinion a second-hand American car is good enough transport for such. An honest British sidecar deserves an honest British passenger. It should not be degraded by the transport of man-eating blood-suckers. Whoever occupies it, whether clad in trousers or petticoats, should be a comrade. Comradeship in life is compounded of too many ingredients to admit of definition. On the road it is a simpler matter. He—or she—must love the road as you love it; be ready to share foul or fair weather with you; take speed and trouble as the journey brings them; approve the inns that you approve, and joke with you over the inns that both of you must disapprove; love your mountains and flats, your rivers and your sea; potter when the potter-mood is on you; and trust you when the inevitable tight corner looms up. You will find few such passengers. Treasure them when they come.

"Commandeered whilst a hundred hungry men were threatening to lynch the head waiter."

# EASY STARTING FROM COLD.

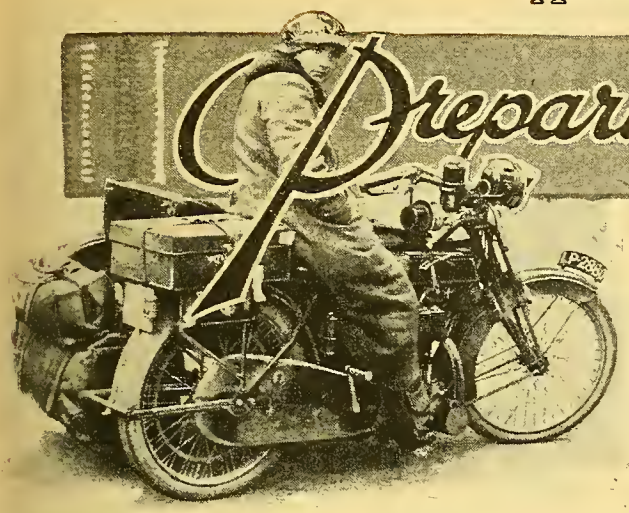
THE successful starting of a motor cycle engine depends on many things; but assuming that a machine is in tune, in the more general sense of the term, the three vital points in the matter are:—(1) The introduction of a good explosive charge into the cylinder; (2) the easy ignition of that charge; and (3) the correct use of the kick-starter. These may be dealt with in turn.

(1) When an engine is cold, a large proportion of petrol in the mixing chamber of the carburetter is necessary to produce the explosive charge, owing to the fact that only a portion of the petrol is vaporised. So if the carburetter is not fitted with a slide that completely shuts off the air, when in the closed position, it is as well to close the air intake by means of a cork, rag, or similar device.

(2) Assuming the magneto and plug to be in order, this matter really resolves itself into the setting of the plug points. Now it is generally advocated that these be set a little wider than a magneto point gauge, but it would appear that if the rider sets his points to this gauge exactly, a spark is more likely to jump the small gap than a larger one at very slow revolutions. The points must of course be clean *and dry*.

(3) Perhaps this point is the most important of the lot. To make an engine start it is imperative that it should revolve over compression, since mixture is not in the least likely to explode unless first compressed. Also, while the exhaust valve is being held open, very little, if any, mixture is being drawn into the cylinder, as air is being easily drawn in through the open valve. So, when using the kick-starter, *always drop the lifter in the middle of the kick and not at the end*, as is done by nine people out of every ten.

One word of caution:—Directly the engine has started, remove the temporary block from the air intake, or the mixture will become too rich to fire.

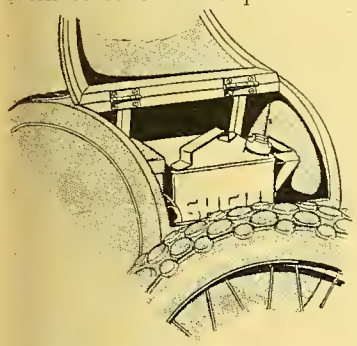


# Preparing for the Tour

## Spares to Take, Attention to the Machine before Starting, and Packing the Equipment.

WHEN a machine is used by that conscientious type of rider who never permits anything to remain undone nor any fault to remain unrighted, it is no doubt always ready for a thousand-mile tour at no longer notice than is needed to fill the tanks and strap on the luggage.

Fortunately, to add spice and variety to our otherwise monotonous existence, such machines are rather the exception than the rule, and a mount which is in daily use, on business journeys or the workaday rounds of trade, as well as the machine which is ridden hard at week-ends by a man too busy during the week to give it attention, will need some kind of cursory overhaul so that the pleasure of its owner (and his family mayhap) shall not be jeopardised during the annual holiday, which is usually all too brief.



If the locker is filled by a petrol tin, the stowage of luggage is difficult. A petrol tin carrier on the chassis is advisable.

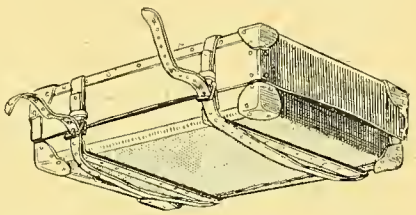
### The Spares Question.

Two considerations differing from the normal conditions of running at once arise before the motor cyclist planning his first long tour. The first is that the machine will be away from its garage for a trip which may run into a thousand miles or more, and the second is that it must carry an extra amount of equipment—in the case of a passenger machine, and depending on the sex (and age if the sex be fair) of the passenger, an extraordinary amount of equipment in all probability.

First, as to the machine. The writer is a "spares fiend," and believes in carrying everything which might be needed—he is an unlucky man and therefore pessimistic. Other riders will indulge the spares-carrying habit to the extent warranted or demanded by experience and temperament. Beginners would be well advised to take a spare inner tube, patching material, an engine valve (complete), a few odd nuts and bolts, a plug or two, copper wire and insulation tape, and transmission spares. If visiting the north-west of Scotland, sidecar and fork springs are advisable.

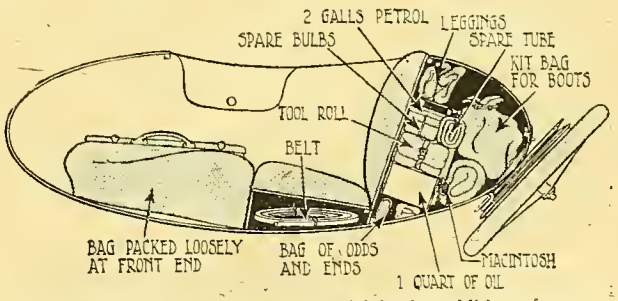
### A Thought for the Machine.

Before starting out, it is as well to recollect that as the machine will be away from headquarters some time, a thorough run round the details requiring lubrication should be given. Oil slopped liberally over fork, frame and control joints—in fact, anywhere where movement takes places—will lubricate and help to keep out the wet. Grease packing in the hubs will relieve anxiety on that score. Oil-bath chains need no special care, but exposed chains are a curse. Graphite grease is good, but often troublesome to apply, and the writer's practice is to save old engine and gear box oil and brush this thickly over the chains before each long journey.



Fibre cases, if made of the right material, are better than leather, for they are waterproof and not so easily ruined by exposure. This is a good specimen, having wood and aluminium battens to prevent chafing on the carrier. It is known as the Wearprufe.

No self-respecting machine should need more attention than outlined in the foregoing. If bigger things are found necessary, it is obviously in want of careful scrutiny, and in any case the job should be done well. To start a holiday tour with a stretched chain, a hook-toothed sprocket, shaky forks, a pulled belt, a wobbly sidecar wheel, a cover showing its

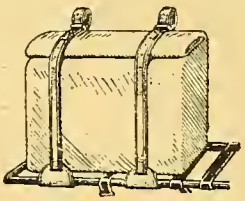


Packing a sidecar for a long trip. With the addition of case on the carrier of the motor cycle and a haversack of oddments, equipment for two people for two weeks may be carried.

**Preparing for the Tour.—**

canvas, or a sidecar arm joined with Meccano strips is asking for a spoilt trip.

Spares and tools should be packed so as to avoid, as far as possible, the unshipping of personal kit or the disturbing of the passenger if trouble is encountered.



A handy receptacle for packing heavy clothing, boots or other awkward articles; the Lycett Swagbag for the carrier.

### On the Solo Mount.

The solo man has few worries, or else leaves them at home. He can pack a week's kit in a rucksack and sling it on his shoulders or dump the lot in a valise securely strapped on the carrier. It is a good plan to fix the straps securely to the carrier by means of wire or string lashings, as by so doing endless trouble due to the load shifting endways, back over the number plate, or forwards into the small of the back, under the agency of rough roads, can be prevented.

No solo man of experience needs to be told that to travel light is to travel light-heartedly.

### Luggage on the Passenger Outfit.

Much-married men need no advice on the subject of what to take on a tour. The responsibility is taken from them—theirs but to pack, theirs but to do or die. On the subject of packing and what "simply cannot be done without," they know the whole truth. Youth, however, is optimistic, and those who tour in double harness for the first time should take the advice of one to whom packing has been, and is, a nightmare. Take the old solo kit in a haversack, and leave the luggage grid, the carrier, the locker behind the cushion, the locker under the seat, the locker in the dash, the well in the floor of the sidecar, and everything that therein is, to the passenger. Even then she will want to put the soap and sponge in your haversack.

There are motor cycle tourists, of course, who send their luggage on by rail. These people are not worthy of the name of motor cyclists, however, for if one cannot travel "self-contained," one admits the limitation of the motor cycle—besides, some of the best touring grounds are far away from railways.

### Final Hints.

Because our weather is usually so mixed, it is advisable to protect the luggage, usually carried in an exposed position, as much as possible from rain. Suit cases, being designed primarily for railroad travel, seldom stand a day's soaking without looking the worse for the exposure, even if the contents remain undamaged. A good leather case is usually ruined in appearance by one tour, a cheap fibre case has no appearance to ruin, but it kinks in wonderful ways when soaked and may let water in. In consequence, the best plan is to wrap up each case in waterproof sheeting—ex-W.D. rubber ground-sheets are "the goods"; they are cheap and good and serve a multitude of purposes.

WHARFEDALE.

# SUCCESSFUL NOVELTY CLUB EVENT.

NOT the least difficult part of a club secretary's duty is to devise events in which all members, sporting and touring, can take part. "The Snakes and Ladders Race" has been very successful in the writer's club. No skill is required, it being quite a matter of luck who wins.

The start is from the headquarters town, and the finish at some suitable rendezvous for tea. Competitors are despatched at minute intervals, and are told that they will probably meet observers who will turn them back, or in some cases allow them to go on if they accept a ticket. Observers are stationed on various roads in such a way that competitors have to go some way round to reach the rendezvous. The "snake" observers should be stationed at the ends of roads with few turnings, so that competitors have to come back some distance after being stopped. The "ladder" observers are provided with a bundle of coloured tickets (about six different colours). Plain cards endorsed with the club rubber stamp will suffice. Each competitor who comes their way is stopped and given a ticket. He is told that it represents marks added or deducted, but no one knows which, and that he must hand it to the timekeeper at the finish. He feels bound to do this, as, if he does not, he may be giving away marks. The sports secretary should write numbers on one set of tickets as follows:—

+5, +10, +15, −5, −10, −15,

and seal these in an envelope. The timekeeper at the rendezvous checks in the competitors and takes particulars of the cards they have collected.

### Ensuring a Social Success.

During the tea stop the envelope is opened and the times are corrected according to the bonus and penalty cards, and the winner is the competitor with the shortest nett time. It adds considerably to the gaiety of the affair if a club official acts the part of a policeman and makes charges of various motoring offences against competitors. These can be tried by a mock court after tea. There is generally an easy-going clubman who does not mind having his leg pulled for the sake of the club. It is a happy idea to make the prizes small, and give a fairly large number, all prizes going to the ladies, except perhaps a booby prize to the last man. This ensures the social success of the run, and brings out the ladies.

The secretary is advised to cook the results a bit to ensure the right member receiving the booby prize. In the writer's club this event is used as the opening run of the season, the club possessing a "valuable" silver cup, one inch high, which is the premier award held for one year. Although not a sporting event in the usually accepted term, it is one of the most popular events of the season. The event outlined above is capable of many variations, which secretaries can make for themselves.

M. J.

# THE MOTOR CYCLE BUYERS' GUIDE OF 1922 MODELS

## SPECIFICATIONS (ALPHABETICALLY ARRANGED) AND ILLUSTRATIONS OF MOTOR CYCLES AT PRESENT ON THE BRITISH MARKET.

THIS Guide, first published in 1906, has become a regular and popular feature of "The Motor Cycle." The possession of this issue will enable readers to make a close study of the various motor cycles now available. A straight edge or a piece of folded paper renders the line more easy to follow. In the case of lightweights made in different forms, the prices given are for two-speed models with clutch and kick-starter where such models are included in the respective ranges. All information has been supplied by the makers, and every effort has been made to avoid inaccuracies, but we cannot hold ourselves responsible for any errors which may have occurred.

KEY TO ABBREVIATIONS.

**VALVES:** S.S., side by side; O.H., both overhead; I. over E., inlet over exhaust; E. over I., exhaust over inlet. **LUBRICATION:** Auto., automatic. Mech.: Mechanical. **TRANSMISSION:** Ch., chain; B., belt. **ENGINE:** T.S., two-stroke; F. twin, Flat twin. Where no type is indicated: single cylinder four-stroke.

## RACING & HILL CLIMBING.

**ANOTHER RECORD MADE!**

**Mr. JUDD on his O.H.V. NORTON uses the Mousetrap Carburettor for the Flying Kilo 89.92 m.p.h. mean speed Flying Kilo 88.38 m.p.h.**

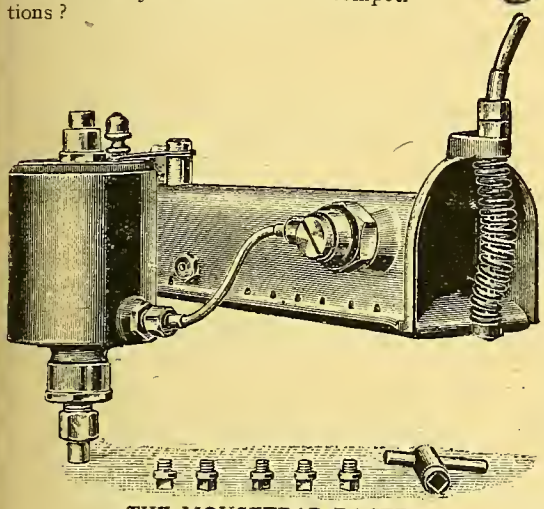
This Carburettor must be of interest to Professional and Amateur sportsmen, because it WINS.

To compete against a man who has a Mousetrap Carburettor is courting defeat unless you have one yourself.

As there is no throttle the construction gives a clear way through, and by natural forces the gas cannot help cramming itself into the cylinder through the scientifically shaped venturi tube in a way no other Carburettor permits.

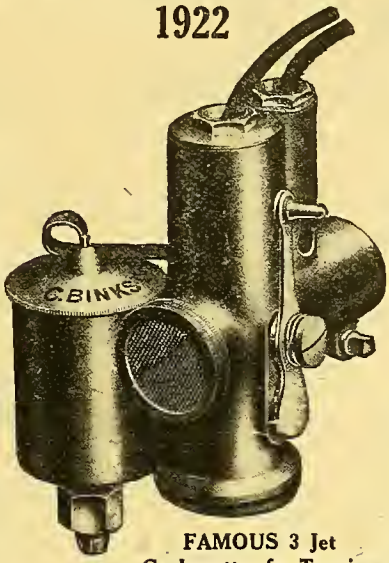
The control wire seen on the illustration governs the strength of the mixture by varying the area around the diffuser jet. This you control from the handlebar.

PRICE **£5 5s.** ex stock for single and twins. Will you order one for competitions?



THE MOUSETRAP RACER.

## NEW CARBURETTORS 1922



**FAMOUS 3 Jet Carburettor for Touring.**

This is an illustration of a TRANSPARENT SIDE SCREEN on a Motor Car, which shields the passenger from wind which eddies round the front screen.

This comfort can be imparted to your Sidecar if it has a flat screen, and your passenger can ride, shielded from wind, rain and mud which is splashed up by passing cars.

Possibly it may be your particular delight to make your passenger as cosy as possible, and this is one way in which you can help to do so.

Delivery in 3 days certain.

PRICE **30/-** pair.

## TOURING & TOWN DRIVING.

This Carburettor is the finest instrument made, and you can buy it on approval for one month. PRICE **£3 15s.**

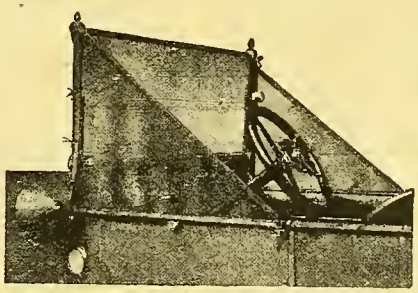
**ECONOMY** is really extraordinary, and is obtained not by a fluke or special driving, but by reason of its construction. The main jet is only brought into operation when power is wanted, otherwise it is sealed by a damper and waste prevented.

**AUTOMATIC.** The three jets give a perfect range and can be tuned to suit individual engines. Once set you cannot get a bad mixture.

**EXTRA AIR LEVER** (independent) is incorporated so that you can coast down hill without oiling your plugs, and use your engine as a brake.

**DRIVING** is easy, as the flexibility is smooth and certain. You can tick along on top gear, and by moving a single lever make the engine do just as you please, and avoid all tearing and racing.

Guaranteed saving, 20 per cent. to 75 per cent. in petrol. Please write for lists and Book on Carburation, and approval terms.



**How to order** a pair of Screens. They are fastened by a hook at the top and turn buttons on the coachwork. Cut out a template in brown paper to fit down the front edge of the screen and hang over 1 in. below the upholstery, cutting out a hole where the screen hinge handle comes through, and send this to us.

Mr CHARLES L. BINKS.

## AN OPEN LETTER TO MOTOR CYCLISTS.

*April, 1922.*

*Gentlemen,*

*You will no doubt have heard of our great loss by the death of Mr. Charles Binks, our governing Director, to whose credit and honour stands our firm and its valuable productions.*

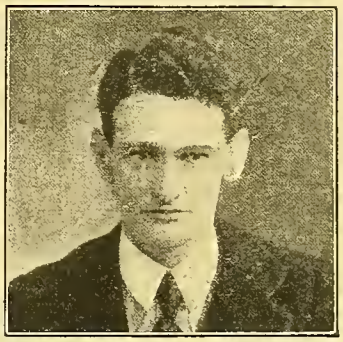
*The Board of Directors intend to carry on the business on the same lines as adopted by Mr. Binks, and will endeavour to serve you courteously and quickly and place their experience of Carburation and Motor Cycles entirely at your service should you ask their advice.*

*The business has lost a personality yet it will not lose the personal element. Mr. C. Binks' two sons, who have been trained in the firm for 12 years, will continue to take an active part in the management and personally supervise the designing, developments and relations with customers.*

*If you will call at the works we shall be glad to see you.*

*Yours sincerely,*
*Harold Binks.*

Mr. HAROLD BINKS.



# C. BINKS (1920) Ltd., ECCLES, nr. MANCHESTER.

# POWER AND—COMFORT

**Lots of both—go to make the "big single" spring-frame Beardmore-Precision a challenge to the cyclecar.**

**The Design is simple, sound and strong throughout. It is a motor bicycle which anyone can drive with ease and *enjoyment* because of the ample power and supreme comfort.**

EXCLUSIVE FEATURES OF THE 4¼ h.p. BEARDMORE-PRECISION.

Full Cantilever Spring Frame and 700×80 mm. (26"×3") light car tyres. 598 c.c. 4½ h.p. Precision single-cylinder four-stroke engine, *with detachable head.*
Automatic and Mechanical Lubrication.
Sturmey-Archer 3-speed gear, clutch and kick-starter, *built-in to engine unit.*
All-steel frame of battleship strength, embodying pressed steel petrol tank (holding 2 gallons), large mudguards and tool-case *as parts of the frame.*
Band brakes to *both* wheels.

OTHER POINTS.

All-chain drive with shock-absorbing hub. Sensible leg-shields. All-black finish. **Price £105**

**Sports Touring & Two-Seater Sidecars at £25, £30 and £35.**

# AIR INLETS: UNCONTROLLED AND CONTROLLED.

## Explaining how the Admission of Pure Air to an Engine is Beneficial—at the Right Time and Place.

ELIMINATION of air-leaks in an engine results in a longer life for the wearing parts, economy in fuel, increased power, and, above all, docility at all speeds. There are only two serious causes of uneven firing. One is uneven sparking, and we are here presuming it non-existent. The other—the *bête-noire* of the conscientious—is nothing more nor less than "atmospheric interference." It may be due to leaks at the induction pipe or carburetter joints, which are easily cured by a spanner, or, if that fails, some packing or a length of homely insulating tape. But far more often the cause is worn inlet valve stems and guides.

To begin with, the manufacturer (*i.e.*, his designer) should provide means of lubricating the valve stems. Most engines do not have provision for lubrication at this important point. Therefore, in the opinion of the writer, a new engine should be fitted immediately on receipt with one or other of the several excellent valve stem lubricating sleeves now on the market.

### Worn Valve Guides.

What of the second-hand machine with valves already far gone in the guides? If it can be afforded, new valve guides (if not valve gear complete) should be fitted, and the above-mentioned valve stem lubricators added to the inlet guides before taking the road again.

A mushroom head valve is so designed as to come down with deadly even accuracy on its entire face each time, and to do so any number of times up to two or three thousand per minute.

How can it keep its head if its tail is wobbling about? So distortion, perhaps ending in breakage at the neck, is the first result. Then premature pitting (in the case of the exhaust, perhaps actual burning) of the face of both valve and seat. Then leaks.

Exhaust valve stem leakage matters little. Often, indeed, *e.g.*, on twins, the position and function of this valve ensure it a liberal dose of oil. On many used engines, therefore, it will be found that the exhaust valve guide is less worn than the inlet. But ideally no oil should pass the piston head; such leakage is often due to careless over-lubrication of the engine, and is another instance of providence turning folly to good account. So the main results of a worn exhaust valve guide are reduced to a mere two: strain, leading to distortion, and premature pitting—so premature that it may be called burning.

A loose inlet valve guide, on the other hand, means the presence of a permanent extra air inlet—an ever-open door which will make starting difficult and slow running impossible. On a "single" it is bad enough. On a twin it is very bad—a constant curse to the disciplinarian who values control over every functional process in his engine. How many "twin" owners have spent hours on plugs or magneto, because "that back cylinder goes out" at low speeds or will not "chip in" at starting—when all the time its inlet valve guide is just admitting a little unwanted air?

No carburetter can be designed to cope with the subsequent admission of unauthorised "atmosphere" as well as to function on a new engine with air-tight passages. I firmly believe pilot jets would never have been brought into use on motor cycles—certainly they would have been unnecessary—if valve guides had been assured of efficient lubrication from the start, either by the designer or by the owner.

### Extra Air Inlet.

With all leaks stopped, then, the rider is controlling every c.c. of incoming gas by means of the usual carburetter lever or levers. Supposing fuel economy is desired, he may fit a smaller jet, but he will lose power. He returns to the old jet—the maker knew best!—and thinks.

It is a curious fact that when an engine refuses to take more air through the carburetter, in 99% of cases it will take it *if admitted to the mixture later on—on the way up the induction pipe—after* the petrol has been broken up. The amount which can be admitted differs, of course, with the engine and the speed; but I have never yet come across an engine which refused to gulp it in through some such secondary inlet when it had said "thank you, no," to one's efforts with the orthodox air lever acting at the carburetter. The air admitted at the carburetter is meant to vaporise the fuel. Apparently, it cannot efficiently both do this and make the best explosive mixture. So when the carburetter air has vaporised it, more air is needed to "explosivise" it. And to vaporise fuel the air should be as hot as possible, yet the later-admitted air should be cold.

An extra air inlet on the induction pipe is therefore necessary to get the best results from an engine at speeds of above 15 m.p.h. on top, or *pro rata* on other gears. It may be in the crude form of a one and sixpenny compression tap (with a large and easily found lever), or one of the variously controlled special makes on the market.

It is not the fault of the carburetter designers that such an extra air inlet remains essential in this year of grace. It is the fault of a fact with which they could only begin to cope by making the whole induction pipe with this secondary inlet arranged to open with the throttle. Since it should be fitted as far along the induction pipe (away from the carburetter) as possible this would be difficult. And then it could not function efficiently at all speeds and in varying barometric condition; nor is it easy or desirable to use it much in traffic. It is essentially an extra—a "gadget," in the original sense of that useful word—for use on the open road by an enthusiast, who is sufficiently repaid for his trouble by the certain knowledge that his engine is getting the best chance in the world.

E. M. WRIGHT.

### Hinckley and District M.C.C.

Members are asked to note that the new address of the hon. secretary, Mr. H. A. Gutteridge, is 37, Park Road, Hinckley.

### North Shields and District M.C.

Recently formed, with headquarters at the Railway Hotel, North Shields, the club has arranged an interesting programme of social events and reliability trials. All interested should apply to the secretary, Mr. Geo. Wood, 9, Railway Street, North Shields.

### Kilmarnock and District M.C.C.

Although scarcely a month old the club has been moving along at great strides, and has had no occasion "to change down." The flag is to be Kilmarnock's coat-of-arms with the club's lettering and colours (blue and gold). The club will have numerous trophies to be contested for annually. The headquarters are The Ossington, Kilmarnock, and the hon. secretary Mr. H. W. Jones, 11, Wilson Avenue, Kilmarnock.

### North Cheshire M.C. and L.C.C.

Although those taking part did not arrive at their objective, the run intended for Monsal Dale on the 25th ult. was a great success. After a strenuous journey across the Cat and Fiddle road through deep snow, tea was taken in Buxton, after which there was a most enjoyable run home through Whaley Bridge and Disley, during which some of the "speed merchants" tried different gadgets in anticipation of the hill climb which will take place on April 9th at Axe Edge.

### Slough and District M.C. and L.C.C.

Results of the very successful hill climb at Kop Hill on the 11th ult. were as follows :—

350 c.c.—On time: 1, F. L. Hall (2¾ Douglas), 57½ secs.; 2, E. A. Cullum (2¾ Douglas), 58 1-5 sec. On formula: 1, E. A. Cullum (2¾ Douglas); 2, F. L. Hall (2¾ Douglas).

500 c.c.—On time: 1, F. L. Hall (2¾ Douglas), 56 secs.; 2, G. W. Lacey (3½ Rudge), 58½ secs. On formula: 1, F. L. Hall (2¾ Douglas); 2, E. A. Cullum (2¾ Douglas).

750 c.c.—On time: 1, F. I. Moore (4 Triumph), 49 secs.; 2, R. Tuddenham (5 Zenith), 54 secs. On formula: 1, A. Andrews (3½ Rover); 2, D. Power (3 A.B.C.).

1,000 c.c.—On time: 1, E. Finch (8 Zenith), 34 2-5 secs. On formula: E. Finch (8 Zenith).

1,000 c.c. SIDECAR.—On time: 1, E. Finch (8 Zenith sc.), 47 1-5 secs. On formula: E. Finch (8 Zenith sc.).

FASTEST TIME.—E. Finch (8 Zenith), 34 2-5 secs.

Although the weather was perfect the surface of the hill was rather bad on account of rain followed by frost during the previous week.

### York and District M.C.

Open to any Yorkshire Centre A.C.U. clubs, the annual hill climb at Sutton Bank will be held on April 22nd.

### Worcester and District M.C.C. and Worcester M.C.

On Good Friday the two clubs will hold a joint half-day reliability trial. The trials secretary is Mr. J. C. Gibbs, 25, Albany Terrace, Britannia Square, Worcester.

### Ilkley M.C. and L.C.C.

For the second year in succession the club has nominated Geoffrey Clapham, of Keighley, the well-known Scott rider, as its entrant in the Tourist Trophy Race. He will ride a 3½ h.p. Scott Squirrel.

A special general meeting on Monday of last week approved an excellent list of fixtures, in which considerable attention was paid to the social side.

### Colchester and District M.C.

An inter-club hill climb with the Bury St. Edmunds Club will be held on Easter Monday, April 17th, starting at 2 o'clock. The usual classes will be run under A.C.U. competition rules. Bounstead Hill, which is about two miles out of Colchester, has been chosen for this event. Particulars may be obtained from Mr. L. C. Solomon, hon. secretary, 121, High Street, Colchester.

### Darlington and District M.C.

If the enthusiasm displayed at recent meetings can be maintained, 1922 will prove a record year; the membership is already rapidly approaching one hundred. Excellent affiliation arrangements have been made—in the first place with the N.E.A.A., whereby all members secure, among other benefits, free legal defence and the advantage of the popular "get you home" scheme; and by its affiliation to the Yorkshire Centre A.C.U. the club caters fully for its sporting members.

### South-West London M.C.C.

With headquarters at 26 Tulse Hill, a club has been formed at Brixton, named as above. Mr. W. T. Carpenter is the honorary secretary.

An invitation run has been arranged to take place on April 9th. The venue will be the Huts Hotel, Hindhead, where lunch will be served at 1.30 p.m. From there a run will be made in the afternoon to Ripley for tea at 5.30 p.m. All intending visitors are asked to write to the secretary at 26, Tulse Hill, and inform him as soon as possible, so that arrangements can be made for meals.

### Brixton M.C. and L.C.C.

Only formed in the middle of March, the club has already become affiliated to the A.C.U. Local motor cyclists who are interested should communicate with the hon secretary, Mr. H. Claude Hughes, 80, Barnwell Road, Brixton, London, S.W.2. (Telephone: Brixton 2771.)

### Maldon and District M.C.C.

A club has recently been formed at Maldon, and motor cyclists in the neighbourhood are invited to join. The entry fee is 1s., and annual subscription 5s. Headquarters, The Chequers Hotel: Hon. Sec., H. Knightsbridge, 55, High Street, Maldon.

### Bulwell M.C.

Thirty-two members entered for the recent opening event, a 50 miles speed-judging contest. Twenty-two finished the course. W. Bales, on a 2¼ h.p. Royal Enfield, was the winner of the solo class, and G. W. T. Hartwell (8 Brough Superior), carried off the prize for passenger machines.

### Berwick and District M.C.

At the annual dinner and presentation of prizes held in the King's Arms Hotel, Berwick-on-Tweed, on the 24th ult., the Mayor and Sheriff of the town and Mr. J. E. Hodgkin, secretary of the North-Eastern Automobile Association, were amongst the guests. There was a large attendance of ladies and gentlemen interested in the club, and the president, Councillor Alex. Darling, was in the chair.

### Ipswich and District M.C.C.

In the form of a 97 mile reliability trial under touring conditions, the opening event of 1922 took place on the 26th ult. A good entry was obtained.

Secret checks were made en route by non-competing members, the journey having to be accomplished at the running speed of 20 m.p.h., non-stop. Riding was very consistent throughout. Special credit is due to Miss L. K. Evans for riding as leader on a solo machine throughout the course without having to register a stop, which, considering the state of the weather and roads during the latter half of the run, was very remarkable. Results :—

Outstanding for lady's performance: Miss L. K. Evans (Triumph).

SOLO MACHINES.—1, K. Fish (Chater-Lea); 2, J. C. Lingley (Triumph); 3, W. B. Kirk (Triumph).

SIDECARS.—1, H. O. Goldsmith (6 Brough sc.); 2, R. Revett (3½ Rudge-Multi sc.); 3, J. W. Pretty (4 Triumph sc.).

### Berwick and District M.C.

The second annual dinner was held in the "King's Arms" Hotel, on the 23rd ult. The president, Alex. Darling, Esq., J.P., presided over a company of 52, and the guests included His Worship the Mayor and the Sheriff of Berwick, Mr. H. Philipson of London, and Mr. J. E. Hodgkin, hon. secretary of the N.E.A.A.

### South East Durham M.C.

On the 22nd ult. the club held a whist drive and dance at Wingate, which proved a huge success, over 200 persons being present. New members are joining each week, and at the moment the membership is 100. All motorists in the district are invited to join. The secretary is Mr. W. H. Armstrong, 9, Cemetery Road, Wheatley Hill, Co. Durham.

### Coatbridge, Airdrie and District M.C.C.

On the 17th ult. the club held a most successful lecture and social evening in the Y.M.C.A. Rooms, Bank Street, Coatbridge. The chairman, Mr. Wm. Mair, opened the proceedings, and introduced the lecturer, Mr. D. Black, of Bates Tyres, Ltd., who gave an exceedingly interesting lecture on tyres.

### Ealing and District M.C.C.

On Saturday last the club held its annual trial for the Longman Cup. The route was mainly over slimy Surrey lanes, and two circuits of a 30-mile course had to be covered non-stop. In the stopping and re-starting test, M. Pearson (Triumph) put up the best performance, crossing the second tape in 4 secs. The Longman Cup was won by W. G. Boyer (Norton), whose total time error over the two circuits was 19 secs. only. The only other competitors to complete the course non-stop were Nias (Ariel), Giladjean (Wooler), Noble (Hawker), and two light cars.

### Westmorland M.C.C.

When the arrangements of the club were formulated for the season a strong desire was expressed in the committee that every opportunity possible should be given for the novice riders. Happily the ambition of the committee and officials has been realised at the very first run, for in a speed-judging contest a young rider who had never previously been in a competition, and who, in fact, had only ridden a machine for about a fortnight, carried off the first prize. The full results were as follows :—

1, J. Bland (Velocette), 25 secs. out; 2, J. H. Hall (Velocette), 50 secs.; 3, W. Hutchinson (Bat-Jap), 1 min. 20 secs.

The following also finished in order of merit: F. Brennand (Triumph), W. Westwood (Triumph), A. Snaith (Triumph sc.), W. A. Carter (3½ Ariel sc.), B. Turner (Velocette), J. Atkinson (Velocette), W. Kendall (8 Acme sc.), R. M. Chaplow (Scott), P. Hoggarth (2¾ A.J.S.), H. Longmire (2¾ Raleigh) and R. R. Rothwell (Triumph) tied, W. Killingbeck (Triumph), T. E. K. McNaughtan (Morgan), E. A. Earl (Sunbeam) and B. Hill (Velocette) tied, A. J. Miles, M. Sedgwick (Sunbeam), S. Bewsher (Francis-Barnett), P. M. Rheam (Scott), and A. Anderson (7 A.J.S. sc.).

## Week-End Club Events.

*April 6th.—North Wales M.C.C.—Reliability Trial.*
*April 8th.—Coventry Triangle M.C.—Run to Maxstoke Priory.*
*April 8th.—Coatbridge, Airdrie and District M.C.—Opening Social Run.*
*April 8th.—Essex County and Southend A.C.—Surprise Run.*
*April 8th.—Coventry and Warwickshire M.C.—Cole Cup Reliability Trial.*
*April 8th.—Liverpool M.C.—Club Run.*
*April 8th.—Redditch and District M.C.C.—Flexibility Test.*
*April 9th.—Eastern Counties M.C.—Run to Watton.*
*April 9th.—Eccles and District M.C.—Tour.*
*April 9th.—Coventry Triangle M.C.—Run to Edge Hill.*
*April 9th.—Featherstone and District M.C.C.—Run to Harrogate and Knaresboro'.*
*April 9th.—Sheffield M.C.C.—Run to Normanton Inn.*
*April 9th.—Rugby M.C.—Hill Climb.*
*April 9th.—Barrow and District M.C.—Reliability Trial.*
*April 9th.—Rochester, Chatham and District M.C. and L.C.C.—Run to Hawkhurst Green.*
*April 9th.—Halifax and District M.C. and L.C.C.—Run to Alderley Edge.*
*April 9th.—Colne and District M.C.—Run to Whitewell.*
*April 9th.—Bradford M.C. and L.C.C.—"Dispatch Riders'" Trial for Sidney Cup.*
*April 9th.—Brighton and Hove M.C.C.—Picnic Run to Leith Hill.*

### Public Schools M.C.C.

A successful Brooklands meeting was held last Saturday before a goodly crowd of spectators. The various events were well supported, and an excellent afternoon's sport was enjoyed. Col. F. Lindsay Lloyd, the president of the club, by whose courtesy the meeting was able to be held, was a tower of strength, officiating as starter, judge, time-keeper, and in various other capacities.

The club, as a matter of international courtesy, invited M. Péan, the Peugeot expert, to become an honorary member for the day, and compete in the various events, but he decided that it would be unfair to compete against amateur riders.

The results were as follows :—

GENERAL HANDICAP.

| | Secs. |
|---|---|
| 1. J. B. Browning (3½ Sunbeam) | 49 |
| 2. J. C. Watson (4 Harley) | 20 |
| 3. Col. R. N. Stewart (6 Trump-Jap) | scr. |

Won by 100 yds. Speed 52.8 m.p.h.

HANDICAP FOR 500 c.c. MACHINES.

| | |
|---|---|
| 1. W. H. Sheraton (3½ Norton) | 14 |
| 2. G. J. Thompson (3½ A.B.C.) | scr. |
| 3. E. O. Mizen (3½ Norton) | 34 |

Sheraton in spite of starting 9 secs. late, won by 50 yds. Speed 59.3 m.p.h.

GENERAL HANDICAP.

| | |
|---|---|
| 1. J. C. Watson (4 Harley) | |
| 2. Col. R. N. Stewart (6 Trump-Jap) | |
| 3. C. C. Labin (3½ Zenith-Bradshaw) | 40 |

Won by 150 yds. Speed 61.92 m.p.h.

TEST HILL (Standing Start).

| | |
|---|---|
| 1. W. H. Sheraton (3½ Norton) | 11⅘ |
| 2. J. B. Browning (3½ Sunbeam) | 11⅘ |
| 3. H. B. Browning (2¾ A.J.S.) | 12⅘ |

KILOMETRE SCRATCH RACES.

Class I. Col. R. N. Stewart (6 Trump-Jap).
Class II. C. C. Labin (3½ Zenith-Bradshaw).
Class III. H. B. Browning (2¾ A.J.S.).

GENERAL HANDICAP.

| | |
|---|---|
| 1. J. B. Browning (3½ Sunbeam) | 40 |
| 2. W. H. Sheraton (3½ Norton) | 10 |
| 3. Col. R. N. Stewart (6 Trump-Jap) | scr. |

Won by 60 yds. Speed 55.59 m.p.h.

3-LAP MATCH (level).

Captain A. G. Miller (Wolseley car) beat Co. R. N. Stewart (6 Trump-Jap) by 10 yds. Speed 72.18 m.p.h. Miller's fastest lap 77.2 m.p.h.

### Redditch and District M.C.C.

In the form of a sporting half-day reliability trial the opening run was held on the 25th ult.

Twenty-six members faced the starter and 16 finished the course, which included two water-splashes and numerous boggy lanes. The best individual performance was made by H. Ward (4¼ B.S.A.) Results :—

250 c.c. SOLO.

1. W. Brown (2¼ Velocette).
2. E. Radnall (2½ Radco).

600 c.c. SOLO.

1. H. Ward (4¼ B.S.A.).
2. J. Weller (3½ Norton).

OVER 600 c.c. SIDECARS.

F. Jakeman (8 Matchless sc.).

350 c.c. SOLO.

F. Robbins (3½ Beardmore-Precision)

600 c.c. SIDECARS.

1. R. Nicholls (4¼ B.S.A. sc.).
2. E. Smith (3½ Norton sc.).

# OVER KIRKSTONE PASS AGAIN.

## M.C.C. London-Edinburgh Run to follow the 1920 Route. Starting Point at Hendon.

FEATURES of the 1922 London-Edinburgh run will be a new starting-point and the adoption of the 1920 route (embracing Kirkstone Pass, from Ambleside), with slight modifications.

For the first time for many years the starting place outside the Gate House Hotel, Highgate, will be abandoned. This is a great pity, as the Highgate starting point, first used sixteen years ago, has always been most popular, and the enormous crowd orderly and well behaved. Notwithstanding, it is felt that it would be more convenient to start from a more secluded spot where the competitors could be handled with greater ease, and on Friday, June 2nd, this popular run to the north will start from outside the London Country Club, Hendon. Negotiations are already in progress between this club and the Motor Cycling Club, and no doubt satisfactory arrangements will be made.

### A Circuitous First Stage.

Leaving Hendon the competitors will traverse a hilly and rather complicated piece of country lying between the two main roads, the Edgware Road and the western branch of the Great North Road. They will pass through Mill Hill, Highwood Hill, Arkley, to Barnet, where they will join the Great North Road.

The course will be the same as utilised in 1920, over Kirkstone Pass from Ambleside, but a slight alteration will be made at Kendal, the twelve miles' approach to which will be by the shorter and more hilly road.

Entries close on May 15th, and the latest date for receiving applications for membership for the purpose of this trial will be April 29th. Members are reminded that subscriptions must be paid before entries are accepted, and that competitors desiring to ride together will be limited to groups of three, while all members of intending groups must send in their entries at the same time.

# EXTRAORDINARY TRIAL CONDITIONS.

## Deep Snow Causes Curtailment of Western Centre Trial.

Never one to hesitate at obstacles, H. F. S. Morgan (8 Morgan) did the work of a snow-plough on several occasions. In this picture his three-wheeler is recovering from a slight skid.

THERE are some who may criticise the organisers of the A.C.U. Western Centre trial for arranging an event scheduled to cover 230 miles so early in the year. Nevertheless, they can hardly be blamed for the extraordinary conditions which prevailed on Saturday last.

Starting from Clent in the early morning, the roads were frozen and dusty, and though an icy wind was blowing there was every prospect of the hills being in dry condition. Before reaching Cheltenham the roads were covered with snow, and only a few miles further on the route was blocked by four-foot drifts, no traffic being possible in places. A detour was made, but for a matter of 35 miles progress was but little more than a fast walk, and near Warmley the roads were again impassable. Conditions improved on nearing Bristol, but so great was the delay that the stewards wisely decided to conclude the trial at Clevedon—originally intended as the lunch stop.

### Medals for the Hardy Ones.

After a stewards' meeting it was announced that all solo riders who reached the finish, and all drivers of passenger machines to check in either at Tetbury or Clevedon, would be awarded a special silver medal, to rank as a first-class award, and to be engraved with the words "Western Centre Arctic Trial." This decision was received with cheers by the assembled competitors, and certainly anyone who reached the finish, by whatever means, richly deserves his medal.

Never before have we seen anything to equal the snowbound roads in the West of England, and it is many years since such a snowfall has occurred in these parts. Falls were frequent, and it was not uncommon to find an exhausted solo rider lying where he fell, after struggling through the drifts, while drivers of passenger machines took it in turns to lift, push, and man-handle each other's vehicles through masses of snow at least two feet deep in places.

### On the First Stage.

From the starting point at Clent, near Stourbridge, the soloists were sent away at the rate of two per minute, while passenger machines left at minute intervals.

Only three miles from the start came Shut Mill Hill, a rough lane with a deep central gully, which was robbed of its terrors owing to a night's frost, which had solidified the greasy patches. The early solo riders performed uniformly well, and in its existing state the hill was too easy for detailed performances to be of interest. A few, however, touched with their feet, and at least two sidecar outfits failed owing to the engine hitting the ground.

Beacon Hill also, though rough, is a simple climb when dry. There followed a check at Bromsgrove, only 11 miles from the start, and a second check at Evesham after a further uneventful 20 miles.

### First Ice—then Snow.

Just before Winchcombe the roads became coated, first with ice, which made solo work a little tricky, and then with a thin layer of snow. This snow became thicker on the heights of Cleeve Hill, and soon after joining the Cheltenham tramlines a sharp descent led to the foot of Gambles Lane. This steep hill has been so frequently mentioned that it needs no description, but its snow-covered surface gave an air of novelty to the ascent and caused an unusual amount of wheel slip. Particularly good climbs were made by W. B. Gibb (3½ Douglas), E. A. Barnett (2¾ Francis-Barnett), M. Bishop and S. Gill (2½ Sun-Vitesses), and F. G. Morgan (2¾ Cotton).

### Up Birdlip in the Snow.

There was a third check at Cheltenham, and passing out of the town Leckhamton Hill was ascended; then came the first taste of deep snow. Two miles from Birdlip summit the road was blocked with a drift reputed to be four feet deep. This necessitated a descent to the foot of the well-known hill and a subsequent ascent.

The climb presented no difficulty to solo riders until the last few yards, where deep snow covered a frozen surface and rider after rider fell; many passenger vehicles had trouble with wheel slip at the same point.

A sharp right-hand turn led along the top of the ridge of hills, where constant deep drifts of virgin snow pulled up the early arrivals. J. A. Newman led on a 3½h.p. Douglas, and after forcing his way through a number of deep snow banks he collapsed for a time and others took up the duties as snow-plough. Constant changes in leadership were necessary to relieve the pioneers, but it was no uncom-

**Extraordinary Trial Conditions.—**

mon event to count thirty competitors held up while the leaders were pushed and carried clear of the deepest snow. This kind of progress continued for mile after mile, and it was seldom that one could get into top gear for 100 yards at a time. Falls were frequent, but after a while one became accustomed to the conditions and the average pace improved a little. Chances were taken, of course, and often they came off; when they did not the rider did.

**Clean Climbing Almost Impossible.**

Knapp Hill is not easy at the best of times, but with a snow-covered surface it became a terror. The long, steep climb alone is sufficient to account for weaklings, but the right-hand hairpin near the top defeated the majority. At this point we saw very few really clean climbs, but the following ascents were noticeable :—W. Brandish (4½ Humber), R. Grindlay (4½ Humber), A. E. Rollason (3½ Ariel), M. Bishop (2¼ Sun-Vitesse), who was baulked), H. Stretton-Ward (3½ Triumph), H. Greaves (3 Beardmore), A. R. Edwards (2¼ Levis), E. J. Henson (2½ Allon), R. W. Duke (3½ Trimmph), W. H. Bashall (6 Martinsyde sc.), F. T. Sibley (3½ Rudge sc.), L. Clulee (2½ Allon sc.), F. W. Giles (7 A.J.S. sc.), A. Watson (4¼ Sunbeam sc.), G. H. Goodall and H. F. S. Morgan (8 Morgans), and J. W. Meredith (8 T.B.). There was a good deal of baulking at this point and many failed and ran back into the hedge. Near this point Mrs. D. V. Cocks, who sportingly attempted the course on a brand new 3 h.p. Beardmore and sidecar, disappeared from the trial with clutch trouble. P. Pehrson (4 Dunelt sc.), who looked like making a clean climb, broke a belt just as he was over the worst part. W. F. Scott (3⅜ Scott sc.) made a very fine attempt and only just failed. The following made good attempts and only steadied slightly :—V. C. Anstice, F. G. Ball, and P. Phillips (Douglases), G. Tucker, F. Adam, and H. Collins (4 and 3½ Nortons), A. Paley and B. Butcher (3½ Sunbeams), H. Greathead (3 Ivy), and E. Cope (Raleigh).

Further on, the roads, which at first showed signs of improvement, got worse and worse, and both motor cycles and cars were constantly held up, lifted, and

A. G. Cocks (4¼ Beardmore-Precision sidecar) negotiating a tricky section near Brimscombe.

Even Birdlip caused several to foot-slog, although the lower reaches (shown) were climbed with ease.

Fortunately the snow on Knapp Hill did not make it quite impossible; F. T. Sibley (3½ Rudge sidecar) is shown making good progress.

**Extraordinary Trial Conditions.**—carried. A certain well-known racing rider showed a Napoleonic genius for circumventing obstacles which appeared to be insuperable. Where the road was impassable, he made a detour across the fields, and other competitors followed his lead.

Most of the solo riders short circuited the route near Old Sudbury and took the lower road to Bristol. This was a wise move, since the passenger machines and a few solo men who attempted to follow the route were finally held up after Herculean labours short of Warmley by a wall of snow. These unfortunates were forced to retrace their steps and follow the lead of the early solo motor cycles.

Thereafter the warm sun and traffic made the road rideable, and ten miles before Bristol a snow plough had done good work.

### Any Way to the Finish.

The rest of the journey became a "go as you please" event, and only one rider, G. Tucker (4 Norton), attempted Rectory Lane, the last bad hill before the "lunch" check. Indeed, some ten or a dozen riders remained at Kingswood, and rumour had it that they were enjoying hot baths as the remaining heroes passed on, determined to reach the half-way mark at all costs.

The first man was due at Clevedon pier at 12.48, but actually the first batch were timed in at 3.15, and consisted of J. Whalley (2¾ Massey-Arran), J. Roberts (2¼ New Imperial), A. Bennett and G. Dance (3½ Sunbeams), B. Butcher (3½ Sunbeam), and W. Moore (3¾ Scott). E. A. Barnett (2¾ Francis-Barnett) was officially timed in some minutes later, but appeared to arrive with this batch.

The following officially finished the course :—

COMPETITORS WHO QUALIFY FOR THE SPECIAL "ARCTIC" MEDAL.

*Arrived Clevedon.*

J. A. Newman (3½ o.h.v. Douglas).
V. C. Anstice (3½ o.h.v. Douglas).
A. Colcombe (4 Indian).
J. Whalley (2¾ Massey-Arran).
B. Kershaw (2¼ New Imperial).
J. N. Roberts (2¼ New Imperial).
E. W. Spencer (3½ o.h.v. Douglas).
W. J. L. Paynter (3½ Norton).
A. Bennett (3½ T.T. Sunbeam).
G. Dance (3½ T.T. Sunbeam).
W. B. Gibb (3½ o.h.v. Douglas).
F. G. Ball (2¾ Douglas).
P. B. Phillips (2¾ Douglas).
C. G. Pullin (2¾ Douglas).
S. M. Greening (2¾ Coventry Eagle).
E. A. Barnett (2¾ Francis-Barnett).
K. J. Davis (3½ Sunbeam).
A. E. Rollason (3½ Ariel).
W. T. Woodcock (3½ Ariel).
L. Newey (3½ Ariel).
W. H. D. Drew (3½ Norton).
M. Bishop (2¼ Sun-Vitesse).
F. J. Johnson (2¼ Sun-Vitesse)
B. Butcher (3½ Sunbeam).
A. W. Thrush (3½ Sunbeam).
F. J. Adam (3½ Norton).
C. W. Ramstedt (2¾ Cotton).
F. Ferriday (2¾ Omega).
H. Greaves (3 Beardmore).
A. E. Paley (3½ Sunbeam).
F. W. Hughes (2¾ Rex-Acme).
N. W. Smith (4 Triumph).
W. Moore (3¾ Scott).
R. Sadler (3 Ivy).
H. Gibson (2¾ Raleigh).
H. J. Greathead (3 Ivy).
W. H. Hadfield (2¾ Raleigh).
C. F. Nott (2¾ Raleigh).
A. R. Edwards (2¼ Levis).
E. F. Cope (5-6 Raleigh).
R. C. Cooper (2½ Alldays Allon).
C. W. J. Bushy (2¾ New Imperial).
R. C. Bennett (2¼ Federation).
L. R. J. Blick (7-9 Harley-Davidson sc.).
H. S. Perrey (6 B.S.A. sc.).
B. Bladder (8 New Imperial sc.).
T. H. Weaver (2¾ Sirrah sc.).
P. T. Sibley (3½ Rudge sc.).
W. L. Danskin (3½ Rudge sc.).
A. G. Cocks (4¼ Beardmore sc.).
F. W. Giles (7 A.J.S. sc.).
F. W. Becker (5-7 McKechnie).
H. O. Walters (8 Ariel sc.).
W. F. Scott (3¾ Scott sc.).
G. H. Goodhall (8 Morgan).
J. W. Meredith (8 T.B.).
W. A. Carr (8 Morgan)

*Arrived Tetbury.*

J. T. Bashall (6 Martinsyde sc.).
W. H. Bashall (6 Martinsyde sc.).
E. H. Gifford (6 Martinsyde sc.).
B. L. Bird (6 B.S.A. sc.).
J. H. Walker (6 B.S.A. sc.).
P. Pehrson (4 Dunelt sc.).
N. Hall (2¾ O.K. Junior sc.).
L. E. Clulee (2½ Alldays Allon sc.).
H. G. Uzzell (8 New Imperial sc.).
V. H. Smith (3½ Norton).
A. Watson (4¼ Sunbeam).

---

### ASTERISKS.

Seven Douglases started and seven finished. Three of these were standard 2¾ h.p. three-speeds. All the Raleighs finished.

* * *

The only lightweight sidecar to reach Clevedon was T. H. Weaver's 2¾ h.p. Sirrah.

* * *

Not a few machines showed signs of their hard work and many falls. On the whole, however, snow is soft to fall on, though a motor cycle would be an uncomfortable companion even on a feather mattress.

* * *

After the finishing check closed we noticed B. L. Bird (6 B.S.A. sc.), T. H. Walker (6 B.S.A.), H. G. Uzzell (8 New Imperial sc.), and A. Watson (4¼ Sunbeam sc.) nearing Clevedon.

* * *

Even in the Scott trial we have never witnessed, nor experienced, so many falls per mile, yet the greater the difficulties the more the riders became obsessed with the idea of reaching Clevedon.

* * *

Of 127 entrants, 43 solo men reached Clevedon and 39 sidecars, three-wheelers, and cars reached either Tetbury or Clevedon, thus qualifying for medals.

Left: Other competitors lend a hand in lifting J. T. Bashall's Martinsyde outfit over a snow drift. Right: Solo riders following the leader who has forced his way ahead. Each man took his turn as pioneer.

# AN AMATEUR ROAD RACE.

## Manx M.C.C. Proposes to Organise a Two-Lap Race for Private Owners over the I.O.M. T.T. Course. "The Motor Cycle" to Present a Trophy.

*The proposition of the Manx M.C.C. to organise an amateur road race was sympathetically received and fully discussed by the A.C.U. Competitions Committee. Permission was granted for the Club to apply for a permit, and the Club was instructed that full details as to the proposed race must be furnished at the same time, when the matter would be further considered at the Competitions Sub-committee's next meeting. —A.C.U. communiqué.*

### For Amateur Speedmen Only.

KEEN private owners have long desired a road race for themselves, and it is with much pleasure that we announce the likelihood of a wish so often expressed in these columns becoming an accomplished fact.

Provided that A.C.U. permission is granted, and that sufficient support is received, the I.O.M. Club will run a two-lap race for amateurs over the famous T.T. course, on the Wednesday between the junior and senior events proper—*i.e.*, May 31st. That this should be done was suggested in *The Motor Cycle* of February 23rd (page 231), where also were given proposed regulations to eliminate the trade rider, the "shamateur," and the specially factory-tuned machine. These suggestions, which are recapitulated below, will form the basis of the rules now being drafted to govern the new amateur race.

It is unfortunate that longer notice of the event could not have been given, but we feel confident the sporting private rider will recognise the necessity of making this year's race a success in order to ensure that the fixture becomes an annual.

Whether three capacity classes will be included is uncertain, and it may be that, for the present, the one limit of 500 c.c. will be made to suffice.

Therefore owners of o.h.v. Douglases, Rudges, Scotts, Sunbeams, o.h.v. Triumphs, and such-like machines should at once get into communication with the Secretary of the Manx M.C.C. (Mr. H. Rogers), Douglas, I.O.M., in order that some idea may be formed of the support which the event will receive. It is anticipated that the entry fee will be £10, and, after expenses have been paid, 50 per cent. of any surplus will be returned to the entrants.

The proprietors of *The Motor Cycle* will present a silver cup to the winner, but whether this will be a perpetual trophy or one to be won outright has not yet been decided.

It therefore only remains for the enthusiastic amateur rider to support the scheme *at once*. If he owns a reliable machine which will reach 60 m.p.h. against the clock, neither make nor date matter much; he will have a chance of winning what should become the most thoroughly sporting event of the motor cycle year. For, as was pointed out in a previous article, the best rider who makes a non-stop run should win, not the man on the super-tuned machine.

The general regulations will probably be on the lines summarised below (a *précis* of the article of February 23rd):

Entry is prohibited to those who are engaged in the manufacture, sale, exhibition or exploitation of motor-cycling goods or accessories.

No entrant shall be eligible who accepts or has accepted any monetary benefit or consideration or the equivalent from a person or firm trading in the manufactnre or sale of motor cycles or motor cycle components or accessories.

No entrant shall be eligible who has previously gained a gold medal in any Tourist Trophy race, or who is already entered for this year's Tourist Trophy race. (N.B.—This rule may seem hard to many, but it must be remembered that the event is intended to attract the rider who has previously stood out on the quite reasonable score that the odds against him were too great. Of course any private owner who rides in this year's T.T. race proper and fails to gain a gold medal would be eligible for next year's amateur event.)

Each machine must be wholly the entrant's *bona fide* property, and must have been in the owner's possession for at least three months prior to the announcemeat of the race. (N.B.—This rule may be modified this year on account of the short notice of the event); it must be, or have been, a listed model to catalogue specification, and must have been offered to the public in its present form for at least six months prior to the date of the race.

Each entrant must sign a declaration that these particulars are complied with and that he has received no help or assistance from any manufacturer.

### To Find the Best Amateur Rider.

Further regulations will probably provide for supervision of the machines during the practising period, including replacements and spares.

The main principle upon which the rules will be based is that the race is intended to find the best amateur rider; all endeavours will be made, therefore, to ensure that every entrant shall have an equal chance. If factory assistance of any description is rendered impossible this should not be difficult.

# RATIONAL RATING OF ENGINES.

## Suggested Official Ruling Based on Cylinder Capacity. 100 c.c. to the Horse Power.

IT will be remembered that at the Bournemouth general committee meeting of the A.C.U., held at the end of last year, a special sub-committee was appointed to go into the question of horse-power rating, the A.C.U. being well aware that the present rating of motor cycle engines was misleading and absurd. That this is so has long been the opinion of *The Motor Cycle*, which has dealt with the matter not only before the war but recently, and in the issue of December 15th published an article entitled "Misleading Horse-power Ratings," which went very closely into the matter.

The sub-committee consisted of Prof. A. M. Low, in the chair, Major S. R. Axford, Messrs. E. M. P. Boileau, E. B. Ware, and S. L. Bailey. The only absentee at the recent meeting was Mr. S. L. Bailey. After some discussion it was finally agreed "that for the purpose of the classification of motor cycles according to their power the A.C.U. shall in future describe them by their cubic capacity expressed in cubic centimetres divided by 100, such rating to be known as Horse-power A.C.U. Rating. For instance, an engine with 499 c.c. capacity would be described as 4.99 h.p. A.C.U. rating; a 980 c.c. engine as 9.8 h.p. A.C.U. rating, etc., etc."

This new rating, if universally adopted, will upset a good many of the anomalies to which our article of December 15th referred: for example, it is interesting to note that the 350 c.c. Beardmore-Precision will be rated at 3.5 h.p., or, in other words, 3½ h.p., exactly what it is now called, while the Barr and Stroud engine of the same capacity, now rated at 3 h.p. by its manufacturers, will become 3½ h.p.; the 996 c.c. M.A.G. engine on the 7 h.p. Matchless will agree with the 8 h.p. J.A.P. engine of 976 c.c., the engines being rated at 9.96 and 9.76 h.p. respectively. Again, the absurdity of calling both 293 c.c. and 350 c.c. engines 2¾h.p. will be abandoned, the 293 c.c. engine being rated at 2.93 h.p. and the 350 c.c. at 3.5 h.p.

The recommendations of the sub-committee, before being definitely put into practice, are, we understand, first of all to be submitted to the Manufacturers' Union, and must finally be passed by the general committee of the A.C.U.

# A TRIAL THROUGH BELGIUM AND FRANCE.

IT is not often that a competition passes through more than one country, but an ambitious trial is to be organised by the Royal Moto-Club of Liége from May 17th to 26th, under F.I.C.M. rules, starting in Belgium and traversing practically the whole length of France. This competition is open to all types of motor cycles, is to be an international one, and open to all countries and clubs attached to the F.I.C.M.

It will be run under touring conditions, and the journey will be accomplished in three days. The first stage is from Liége to Dijon, 306¼ miles, the second from Dijon to Digne, 288⅛ miles, and the third from Digne to Nice, 95 miles. There will be one day's rest at Nice, and the competitors will return in three days to Liége by the same route. The total length of the double journey will be 1,378¾ miles. Information concerning this event can be obtained from the secretary, The A.C.U., 83, Pall Mall, London, S.W.1.

# A SPORTING TRIAL IN THE SNOW.

## Surbiton Club's Successful Event for the Mellano Cup.

TO obtain an entry of 55 for a purely club one-day event argues well for the enthusiasm and sporting spirit of the Surbiton Motor Club members. True, the prize at stake was the Mellano Cup, a trophy well worth the winning; nevertheless, the large entry is indicative that club trials are exceedingly popular

In fine but very cold weather the first man was started from the Talbot Hotel, Ripley, to Guildford; here Bright Street Hill, a favourite test hill with Surrey clubs, was climbed

A few miles of main road work brought the competitors to a five miles colonial section, very rough, muddy, and made more severe by an overnight fall of snow. Consequently to the first men the course marked by blue dye was somewhat difficult to find. This occasioned several deviations from the route.

On most colonial sections a hard riding track can usually be found somewhere, but with snow totally obscuring the road surface one can imagine it was somewhat of a lottery as to where one would land.

The gyrations of some of the competitors were distinctly amusing, and falls were numerous, thereby depriving the unfortunates of any chance of lifting the cup. For good driving on this section particular mention should be made of F. M. Gwyne on a 1¾ h.p. Young Attachment; to the ordinary machine it was mostly middle gear work, however, Gwyne, with much lusty big work on the pedals, got through.

Following the colonial section was the hill of the day, Glenlea; this, again, was only difficult by reason of the snow; those that failed were unlucky; under normal conditions it would present no difficulty.

In front of B. S. Allen's 8 h.p. Matchless sidecar will be seen the skid-marks left by the luckless solo men.

Excellent climbs were made by W. C. Hemy (2¾ A.J.S.), F. E. Salter (2¾ Zenith), B. S. Allen (8 Matchless sc.), and A. E. Bridgman (7 Indian sc.). The unfortunates were W. R. Preston (Sunbeam), A. E. Leeding (James), C. E. Taylor (3 Vasco), A. S. Richardson (6 Trump), V. H. C. Gayford (3½ Zenith-Bradshaw), and C. H. O. Allwork (6 Martinsyde sc.).

From Glenlea the route lay through Haslemere, Milford, Godalming, Shalford, Guildford, all main road work, and back to Ripley for lunch.

Numbers were considerably depleted for the afternoon run, as most of those who recorded stops decided not to restart.

White Downs was considered to be the tit-bit of the afternoon, the Ford car which arrowed the course the previous afternoon having to negotiate it on its reverse gear. However, the strong winds of the morning had practically dried the chalky surface, and as wheel slip and not gradient was its chief terror, all difficulty was removed, everybody sailing up with plenty of power in hand.

In all 30 competitors checked in at the finish, a goodly number, considering the severity of the morning section. The committee are to be commended for working out the results that evening; it adds to the enjoyment of an event for competitors to know their award before leaving.

RESULTS.

Mellano Cup and Gold Medal, A. E. Bridgman (7 Indian sc.); 2nd Gold Medal, F. E. Salter (2¾ Zenith); 3rd Gold Medal, L. B. Clark (3½ Zenith-Bradshaw). Silver Medals: A. A. Symes (6 Martinsyde), B. S. Allen (8 Matchless sc.), H. E. K. Sawtell (10 Morgan). Bronze Medals: A. O. Gruzelier (3½ Zenith-Bradshaw), S. R. Axford (3½ Zenith-Bradshaw sc.), F. A. McNab (6 Trump-Jap), G. E. Cuffe (5-6 Metro-Tyler), W. H. Wells (6 A.J.S. sc.), C. H. Mocatta (2¾ A.J.S.), Mrs. Hardee (8 Matchless sc.), F. W. Carryer (4 Hawker), R. Charlesworth (3½ Zenith-Bradshaw), J. L. Boxall (3½ Sunbeam), and A. E. Leeding (3½ James).

# PROGRESS OF THE TOUR DE FRANCE.

## Thirty-two Motor Cycles out of Thirty-eight Starters Complete a Third of the 2,300 Miles Course.

WHEN one-third of the *Tour de France* trials had been run, and the competitors were at Bordeaux, six of the 38 motor cycles had been eliminated and seven others had been penalised for either late arrival or the breakage of sealed parts. L. Psalty (2¼ Levis) lost ten points on the run from Caen to Nantes, while Mineur, on one of the two-stroke 2¾ h.p. Gillets, collided with a cycle car, the damage being such that he had to withdraw. Renier, on another Gillet, lost ten points on the first stage from Paris to Caen, and Dyon, on the water-cooled Viratelle, was penalised five points. Rasser, who was riding one of the two-stroke machines of his own make, lost points on each of the first three stages.

The 500 c.c. solo class made a very fine showing, the six machines, comprising a Blériot, an A.B.C., the two Gnome and Rhône, a Sunbeam, and a Rover, covering the 591 miles without the loss of a single mark.

Among the 750 c.c. solo machines, the first to drop out was Lt.-Col. McKechnie's spring frame motor machine. For some unknown reason the rider failed to reach Rouen in time, and abandoning the trials, turned round and was in Paris the same evening. J. Psalty (4 Harley-Davidson), suffered a bad fall on the road to Nantes, and had to be taken to hospital to be operated on. Another Harley-Davidson, ridden by Smeets, dropped out on this stage; De Neufville's Triumph suffered 20 marks loss, and Arnaud, on an Indian, lost 21 points on the first day

In the sidecar section Dubost on his 350 c.c. D.F.R. sidecar, was the only one to lose point but he was still running at the end of the Bordeaux stage. Sykes (3½ Sunbeam sc.), and Leroux (4¼ B.S.A. sc.), the only two in the 600 c.c. class, had to retire before reaching Rennes. The sidecar attachment broke on the Sunbeam, and being irreparable, Sykes continued solo until notified that this was contrary to the rules. The six men in the 1,000 c.c. sidecar class all covered the first three stages without the loss of points. These machines comprised three Harley-Davidsons, a Blériot, a Viratelle, and a Sunbeam.

# ENTRIES FOR THE T.T. RACES.

## 135 Entries Received at Ordinary Fees. Senior Event Attracts 66. Junior 34 and Lightweights 29. 6 Entries Race Not Specified.

SENIOR RACE, THURSDAY, JUNE 1ST.

### Notes.

Last year's senior winner on a 2¾ h.p. A.J.S., H. R. Davies, will defend his title on a similar machine.

Major Halford, holder of the 500 c.c. hour record, will ride a Triumph.

W. Brandish, who last year rode a Rover in good style, will this year be mounted on a Triumph, as will H. R. Harveyson.

F. G. Edmond last year made the fastest lap. He is again entered on a Triumph, and is one of the favourites.

T. C. de la Hay, Geo. Dance, A. Bennett, C. Greenwood, and Reg. Brown are the Sunbeam riders nominated by the makers.

J. A. Watson-Bourne will ride a Rudge with Danskin and Sibley. Altogether there are seven Rudges entered.

A. Alexander has entered a 3½ h.p. Douglas.

Victor Horsman will ride a Norton in the senior and a Raleigh in the junior race.

D. S. Alexander is to be one of the Indian team.

H. Le Vack is down to ride a New Imperial in both the senior and the junior events.

J. Whalley will again be mounted on a Massey-Arran.

For the first time since pre-war days New Hudsons will figure in the senior race.

Three 3½ h.p. Beardmore-Precisions are entered.

Geo. Grinton is one of the A.J.S. seven in the junior race.

Judd and Denley will again ride Velocettes in the lightweight class.

F. W. Applebee, P. Pike, and G. S. Davison constitute the Levis trade entry.

Dr. Hopwood has again entered himself to ride a Levis.

# EXTENDING THE ORGANISATION OF MOTOR CYCLISTS.

## The A.C.U. Offers Prizes for Original Ideas.

THERE are still a great number of motor cyclists who do not realise the desirability of joining an organ-ation.

Frequently there are brought to our nowledge cases of riders who, through fault of their own, or through, per-aps, a little thoughtlessness or careless-ess, are brought into contact with the w, and are put to heavy and unneces-ry expense. Take the case of the motor clist on holiday on the South Coast ho hails from the Midlands. For all he nows his registration numbers are of the rrect size and are accurately spaced, t perhaps while he is in an hotel a eddlesome constable measures the letters d figures and finds they are 1-16in. out. he motor cyclist is then warned, and ally receives a summons at home to pro-ed down to some South Coast bench to fend his case. Membership of an or-nisation would provide for his being represented and defended free of charge. Again, there is the importance of motor cyclists combining to fight offensive legislation. It is only by sheer weight of numbers that objectionable legal enactments can be combated.

### To Awaken Fresh Interest.

Now the A.C.U., which is in its twentieth year, has laid itself out to do all it can for motor cyclists, but its membership is not yet large enough. Its committee has therefore decided to run a competition which will help to bring home to every individual motor cyclist the necessity of joining the Union, both for his own personal profit and in order to augment the great national body that all must recognise as a necessity.

To the motor cyclist who suggests to the Secretary of the A.C.U. the best method of inducing 250,000 motor cyclists to enrol in the A.C.U. by September 30th will be awarded a prize of £100; the second prize will be £50, and the third prize £10, while there will be twenty consolation prizes of £1 each.

The entrant must express his scheme in 500 words, giving the method to be employed in operating it. These suggestions must be accompanied by 1s., so as to rule out other than serious competitors, and must reach the secretary not later than May 15th. The judges will be the members of the committee of the A.C.U., assisted by Commander F. P. Armstrong, R.N.V.R., acting-secretary of the R.A.C., and others. The committee reserves the right to use or adopt any scheme or part thereof, whether or not a prize has been awarded, but in the event of such use a special honorarium will be granted to any competitor who is not actually a prize-winner. The results of the competition will be announced on or before July 15th this year.

# ROUTE OF THE SCOTTISH TRIALS.

MUCH new ground, for English competitors anyhow, is being broken in the route of the Scottish Six ays Trials, which start on May 1st. The course for five of the six days has w been approved as follows:

1. Edinburgh, Stirling, Crieff, Kenmore, Dalnacardoch, Pitlochry, Kenmore, Perth Cross. 173¾ miles.
2. Perth, Forfar, Laurencekirk, Banchory, Ballater, Corgarff, Grantown. 142⅞ miles.
3. Grantown, Farr House, Inverness, Drummardrochit, Fort Augustus, Inverfarigaig, Kyllachy, Grantown. 139¼ miles.
4. Grantown, Braemar, Strathdon Road End, Calrach Top, Oyne, Aberdeen. 150 miles.
5. Aberdeen, Forfar, Perth, Dollar, Falkirk, Edinburgh (West Mains Road). 162 miles.

The remaining day will be an out-and-home run from Edinburgh, details of which are not yet available.

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### Repairing the T.T. Course.

Sixty men are now engaged in putting the Isle of Man course in order.

### 40 Years' Service.

Mr. H. J. Spooner, C.E., for 40 years head of the Engineering School at the Polytechnic, is retiring. A presentation is to be made by his many admirers.

### Governor's Bridge Improvements Delay.

The improvement to which we have recently referred in the dangerous Governor's Bridge will, we hear, not be ready in time for the 1922 T.T. races.

### O.h.v. Nortons to be Marketed.

It will be pleasing news for Norton enthusiasts to hear that Judd's record-breaking o.h.v. machine is the experimental model of a design which will be added to the standard range as soon as it is fit for production.

### London-Land's End Run at Easter.

A magnificent entry has been received for the London-Land's End run, totalling 322 competitors in all, composed of 122 motor bicycles, 98 sidecar outfits, 9 cycle cars, and 93 cars. A full list of the motor cycle entries will be published in next week's issue of *The Motor Cycle*, together with a map of the course. Details of the car entries will be found in *The Autocar*.

### A Badger Badgered.

Some excitement was recently caused in the vicinity of Regent's Park by the escape of a wild badger from the London Zoological Gardens. After remaining at large for some time, during which period it was seen by various policemen and chased by a taxicab, the whereabouts of the animal was betrayed by the yowling of cats on the licensed premises of the "Yorkshire Stingo" Police investigations resulted in the animal being cornered until keepers arrived from the Zoo.

This badger was presented to the Society by our contributor H. Mortimer Batten, in whose Scott Sociable it was conveyed from its native quarters to its home in Yorkshire, and subsequently to the railway station for transportation to the Zoo. The badger made no attempt to escape while in the Scott Sociable, so evidently he appreciated good springing! It is significant that its final round up should be at the "Yorkshire Stingo"!

### Licences in London.

In future all communications to the London County Council relating to taxation licences should be addressed: The Chief Officer, Public Control Department (Local Taxation Licences), The New County Hall, London, S.E.1.

### Road Books and Maps.

Now is the time to overhaul road books and maps, and in this connection *The Motor Cycle* series is bound to be of interest. *The Motor Cycle* Route Book (2s. 6d.) and the set of maps which our publishers supply in waterproof case (4s. 6d. and 5s. 6d.) will no doubt be found in many sidecar pockets this year, for their popularity among riders continues to increase.

### Victory Trial Hill Ruled Out.

The many complaints made by competitors in the Victory Cup trial with regard to marks lost on Sandy Lane, has resulted in the Trial Committee of the Birmingham M.C.C. deciding that the penalty of four marks for failure on the hill be cancelled, and that a bonus of two marks be awarded to all who climbed the hill. The decision was made before the committee analysed the checking sheets relating to this particular hill.

### Spring!

Spring and snow! Competitors in last Saturday's trials found conditions more winterly than in any London-Exeter run.

### Brooklands Racing Restarted.

Saturday next will see the first motor cycle meeting of 1922 at Brooklands, racing starting at 2 p.m. Six handicaps, including one for private owners, and three scratch races, constitute the programme.

### French Attempt on the Flying Kilometre.

As soon as it was known in France that Judd, the Norton rider, had beaten the kilometre record last month, Péan, the famous Peugeot trade exponent, expressed his intention of coming over to England to try to beat it on Brooklands track. The news had not then reached him that the record had been further beaten by Pullin on the Douglas. However, Péan has postponed his attempt until the end of this month owing to the inclemency of the weather. It will be most interesting to see how the Peugeot will perform, as it seems that Péan has a great deal of speed to add to his machine before attempting to beat the magnificent British records already standing.

AT THE BOAT RACE. Motor cyclists found that their mounts made excellent grandstands from which to view last Saturday's event on the river.

### New President on the A.C.F.

The president of the Automobile Club of France, the Baron de Zuylen, has occupied the post of office since its foundation in 1895, but he has now retired for reasons of ill-health. The new president is Baron Robert de Voguë.

### No Privilege for the Pedestrian.

In the neighbourhood of the Saint-Lazare station (Paris) a foot passenger was summoned by the police and fined a franc for persisting in remaining in the roadway after the driver of a motor vehicle had blown his horn, and for becoming a hindrance to the rest of the traffic.

### International Six Days' Trials.

July 16th is the closing date for the entry of national teams. Machines entered for these teams must be manufactured in the country they represent. A national team must consist of three solo machines and one sidecar outfit or cycle car. One of the motor bicycles must belong to either Class A, B or C, while the others may be in any class. In the case of two national teams qualifying for the trophy it will be awarded to the team with the smallest total cylinder capacity.

### Amalgamation of Newcastle Club.

Interest is being aroused in Tyneside motoring circles by an effort that is being made towards amalgamation by two Newcastle organisations, the Northern and the Newcastle Motor Clubs. According to reports, there is a great probability, even should no actual amalgamation take place, of a working arrangement being arrived at that will suit everybody.

Some months ago a similar scheme including the Newcastle and District Motor Club came to nothing. On that occasion Mr. H. Wilkinson, the local representative of the R.A.C., had a great deal to do with bringing the clubs together.

### More Motor Cycle Police.

The motor cycle penetrates into the farthest corners of the earth, where its utility is appreciated as much as at home. Fourteen patrol men of the Honolulu police are now to be mounted on motor cycles.

The United States of America was the pioneer country of motor cycle police. They were first adopted by the City of Chicago in 1910; there were 25 motor cycle police in 1913, and now 50 new Hendersons have been supplied to the force. This is irrespective of others allotted to various parks in the city.

### The Broken Promise.

One of the conditions of the A.C.U. consenting to run the T.T. races in the Isle of Man this year was that an electric crane should be erected on Douglas quay. Now the I.O.M. people say that such a crane cannot be erected; a story we have heard before, but where there's a will . . . . !

### Commercial Instinct!

It cannot be said that the average young motor cyclist has a commercial mind, but the exception proves the rule, and the following small advertisement makes interesting reading:—"Experienced motor cyclist in London, N.W. district, offers sporting ladies or gentlemen desiring exhilarating country rides the comfortable pillion seat on his special solo motor cycle; 6d. per mile; distance no object; passenger weight limit 9 stones."

### Motor Cycle Locks.

Frequent motor cycle thefts have compelled owners to purchase locks and chains for the better security of their machines. One extra cautious rider recently chained his machine to some railings in London. The lock was of the snap-on type, and when he came to take the machine away he found he had forgotten the key! He lived miles away, and by the time he had returned home and got back to his machine it was lighting-up time. He then discovered that his lamp set was out of order.

### High Tension Overalls.

A correspondent complains of getting shocks through his overalls when they touch the plug and are soaked with water. He is evidently not one of the pioneers who rode the 1903 Ormonde. This machine carried the engine behind the saddle tube. In those days pedal assistance on hills was frequently required, and when indulged in considerable skill had to be exercised so as not to suffer from a shock through the back of the leg, which was as painful as disconcerting when violent pedalling was necessitated.

## EASTER HOLIDAYS.

### Publishers' Announcement.

*Readers who desire to insert Miscellaneous Advertisements in "The Motor Cycle" dated April 20th should note that instructions must be in our hands by first post Wednesday, April 12th.*

*ILIFFE & SONS LTD.*

### Evening Runs.

Immediately daylight saving came into force there was a marked increase of motor cycles on the road in the evenings.

### Swiss Passports.

Visitors from Great Britain to Switzerland must have passports, but the necessity for a visa has been discontinued, notwithstanding the fact that Swiss visitors to England must undergo this formality.

### State of the T.T. Course.

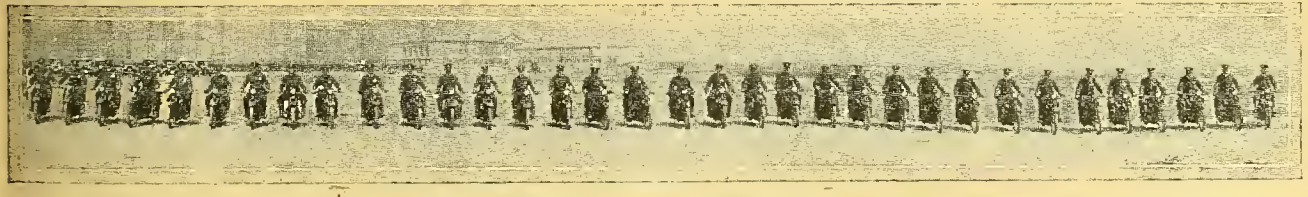
A report has just been received to the effect that the T.T. course is in an appalling condition in parts, the mountain road being badly cut up by the haulage of loads of stones by means of steam wagons. The matter has been brought to the notice of the Highway Board, who are giving it their immediate attention, and we understand a large staff has been engaged to put the roads into a thorough state of repair.

### Italian Road Racing.

Eight laps of 17.4 kilometres comprised the first Italian road race in 1922, and this was won by Mario Cavedini (3½ Norton), who covered the total distance of 139.200 km. (86 miles approx.) in 1h. 33m. 10⅗s., at an average speed of 89.637 k.p.h. (55½ m.p.h.). The second man was Mario Nardelli, also on a Norton, in 1h. 40m. 12⅕s., average speed 83,350 k.p.h. (51½ m.p.h.). Piero Ghersi (3½ Borgo) was third, time, 1h. 42m. 31s., speed 81.469 k.p.h. (50½ m.p.h.). The remainder of the competitors were mounted on Freras, Motosacoches, and Gileras.

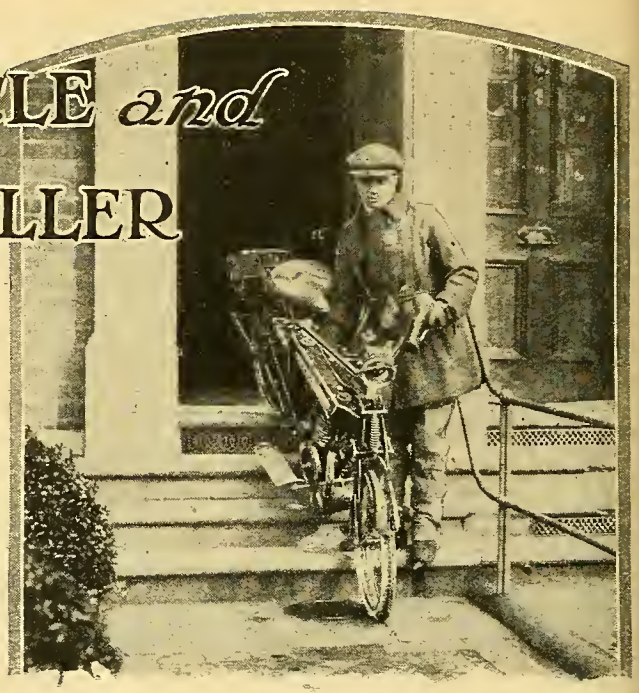
### Solo and Sidecar Race in Switzerland.

Speed events are rare in Switzerland, but this year the Motosacoche Club of Geneva has decided to hold a Grand Prix race for motor cycles and sidecars round the picturesque Lac de Joux, situated among the Jura mountains. The course encircles the lake, and the distance is 21.5 kilometres (approx. 13¼ miles); it must be covered ten times by the 250 c.c. machines, 12 times by the 350 c.c., 14 times by the 500 c.c., and 16 times by the 1,000 c.c. class, while the 1,000 c.c. sidecars will make 9 circuits and 600 c.c. sidecars 7 circuits. Valuable awards are offered as well as class prizes. Entries, which close on May 31st, cost 30 Swiss francs. British entries must be sent to the Secretary of the Auto-Cycle Union, 83, Pall Mall, London, S.W.1. The date of the race is July 2nd.



In Chicago fifty of the local motor police are mounted on four-cylinder Henderson machines. Thirty-four are shown above, making an imposing sight on the parade ground.

# The Motor Cycle and the City Dweller



## Motor Cycling under Difficulties. Handicaps that Add Relish to the Joys of the Open Road.

AS one who was born in the greatest city in the world and lived half his life therein, much of the time as a motor cyclist, the writer feels he is qualified to voice the views of the motor cyclist town-dweller.

We are not all constructed alike. Some prefer the gaiety and hum of city life, while others rejoice in the calm of the country, the song of the birds, and the views of hill or wold. Probably the motor cyclist belongs mostly to the latter category.

### The Rider par Excellence.

What a fine fellow is the motor cyclist who keeps his machine in the centre of one of our great industrial cities. How proudly can he hold up his head and look down upon the ordinary citizen tied down to the crowded train, the bumping bus, or the ever-stopping tram! Never was there such a rider. Grease holds no terrors for him. Necessity has made him skilful. No one would ride wet traffic-bethronged roads for choice, but the town-dweller must perforce traverse them on occasions to reach the country and again to reach home. See him thread his way through the densest traffic; spurting ahead through the narrowest opening, stern of face and yet happy, ready to check at a moment's notice, and wary lest aught meet him from the side street or crossing. He is not to be caught napping. Ever alert, he becomes immune from accident, since caution combined with skill prove to be his sure protection.

### True Lovers of the Country.

Doubtless he envies his country friend who has his own private motor house, where he can tinker o' nights and at week-ends, slip on to the great highway, and cover half of England before he sees a tramline. But he has not the joy of reaching the country after miles of traffic and rough roads. Once the unpleasantness is over the open road is all the more appreciated. We are all better suited to enjoy our pleasures if we do not attain them without a little trouble, and the breath of the sea is all the sweeter to him whose lungs mostly inhale a less pure atmosphere.

That spare valve so badly needed, that piece of copper pipe so urgently required for the week-end job are not to be had for the asking by the country resident. Here the town-dweller scores. All that he needs is at hand, and any repair that has to be done is quickly executed.

There is yet another direction in which the rider who lives in a large town becomes extraordinarily skilful, and this is in *avoiding* traffic. Naturally London offers the greatest scope in this respect. Years ago, when police-trapping was at its height, it was possible to dodge practically every control (and slip clear of the great city, incidentally never touching a tramline except to cross it at right angles) and escape practically every ten-mile limit.

### Conducive to Health and Contentment.

To the city-dweller the motor cycle is an untold blessing. By its possession he owns his own railway train to take himself or his belongings where he will and in his own time. What this means to the health of the nation the Government was forced to realise during the height of the war. Obviously good health and fitness were needed to get the best out of everyone, and when others could not get it the munition worker was allowed a small dole of petrol, not only to enable him to reach his work with comfort and expedition, but to allow him to get clear of the towns at week-ends for the benefit of his health. The late Mr. A. W. Torkington, chairman of the Auto Cycle Union, founded the National Motor Cyclists' Fuel Union for this object, and to the day of his death believed that the motor cycle was a valuable antidote to many evils to which the city dweller is subject. He was of the opinion that it went far towards solving the problem of overcrowding, it enlarged the minds of all who used it, dissipated discontent, and produced that admirable state of affairs—*mens sana in corpore sano*—a healthy mind in a healthy body.

There are few more interesting studies of the town motor cyclist than to see him issuing in his hundreds along the great arteries radiating from the industrial centres at the week-ends. Young men on their motor

**The Motor Cycle and the City Dweller.—** cycles or sidecar outfits with their sweethearts or wives, and the older men on their family buses. All with the same happy if tense look, bent on taking their meal on the wind-swept common, on the wooded hill-top, or by the silver sea, or perhaps on visiting some distant relative or friend. No nation has learned the joys of the motor cycle better than Great Britain, and it is curious indeed that other countries have not even commenced to realise its advantages.

Come, fill the tank with petrol
And fill the flask with tea,
Pack up the food in the old tin box
And leave the town with me.
Soon we've left the tramlines,
The air blows sweet and free,
And we'll sail o'er the hill to the field by the mill
Where the stream flows down to the sea.
And then in the shade of the ev'ning,
Back to our home we'll ride,
To sleep and dream of the swift-flowing stream
And the joys of the country ride.

ON THE PORTSMOUTH ROAD.

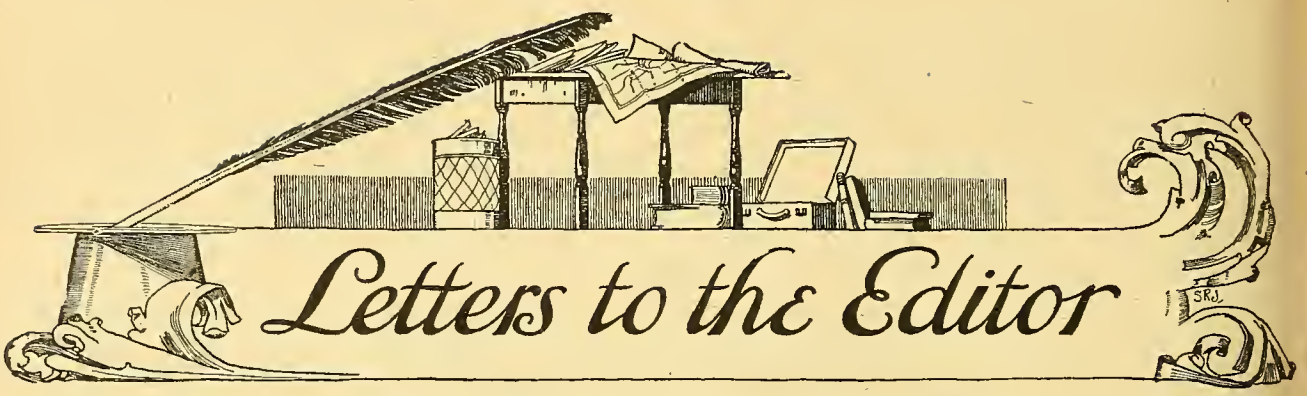
These photographs convey more eloquently than words why the motor cycle is such a popular vehicle with the city dweller, who, independent of train, tram or bus, is enabled to reach the open country with the minimum of effort.

# A MOTOR SHOW IN HOLLAND.

ON Friday last (March 31st), the Amsterdam Motor Show was opened by His Royal Highness the Prince of the Netherlands, and thousands of motorists, motor cyclists, and motor traders have already visited the exhibition. Besides the 51 cars of international makes a good number of motor cycles are on view, the Humber, Sunbeam, Arrow, Triumph, Peugeot, Quadrulet, Bleriot, Ace, Cleveland, Briggs and Stratton, Harley-Davidson, F.N., Rudge, Victoria, Matchless, Blackburne, Bianchi, Royal Enfield, New Hudson, Abingdon King-Dick, B.S.A., N.S.U., James, Levis, Hardy, Sarolea, Henderson, Douglas, Edmund, Eysink, Raleigh, Simplex, Ivy, Opal, Cedos, Wooler, Norton, A.J.S., and Reading Standard being represented. Among the 39 makes mentioned there are 22 of British origin, which shows how popular and how well represented our machines are in Holland.

The only entirely new machine on view is the Dutch 9 h.p. Simplex sporting model. It is of the same type as the 5 h.p. machine which did so well in the last Anglo-Dutch trial, only it is heavier and has a 9 h.p. M.A.G. engine and the Bosch lighting system.

A new local make in which British components are used is the De Anstel. It is a two-stroke of $2\frac{3}{4}$ h.p., and a two-speed gear, and kick-starter.



# Letters to the Editor

The Editor does not hold himself responsible for the opinions of his correspondents.

**Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address.**

### *OIL COOLING AND WORN PISTON RINGS.*

Sir,—I am very interested in the method of cooling an engine by oil, but I take it for granted that such engines are only intended to be used with absolutely tight and efficient piston rings, for if the rings are allowed to be worn and leaky, the plugs are, especially when placed in an exposed position in overhead valve engines, in my opinion, more or less bound to be fouled by the excessive amount of oil circulated. SWEDISH ENTHUSIAST.

### *IN-TOLL-ERABLE!*

Sir,—Some time ago I saw in your excellent paper a growl about the tolls on the Southampton road. These, like other evil things in life, we must I suppose bear with, even if we do not grin when paying; but the limit is reached, I think, when, in addition to being robbed without violence, you are also grossly insulted.

On a recent Sunday I pulled up with a grand sweep and a bang at Woolston floating bridge, with a sidecar outfit bearing a name almost supreme in the motor cycle world—a name which, but two short days before at Brooklands, was on the machine which broke many world's records—removed my fur gloves, raised my triplex goggles, "dropt my nimble saxpence," and received in return a ticket which in cold print described my machine and self as a "Donkey cart and driver." BIG FOUR.

Gosport.

### *MOTOR CYCLES FOR BOYS AND GIRLS.*

Sir,—I was most interested in the letters from your various schoolboy correspondents, and must say I am all for them! I am a rider of the fair sex, and had my first motor cycle in 1913, directly I left school, and I have owned a machine ever since.

To my mind it is not the boys of 14-20 who drive "all out"; they take pride in their mounts, and are careful with them; but I find the road hogs are almost invariably men of about 20-26. I am not by any means a slow rider myself, but—there are road hogs, and road hogs!

I think why so few boys have machines is, principally, lack of finance on the parents' part, and, as for girls, the same reason applies; also, I think they must have gone to schools with "home comforts," or else been "governessed"!

I do not agree with "Gus" that no four-stroke lightweight will do "50." I was timed to do 53 m.p.h. on my 1913 Douglas (standard model).

Here's good luck to the schoolboys! I'm with them every time! 1922 TRIUMPH 4 h.p. SOLO.

Kent.

Sir,—As an elderly motor cyclist and owner of a 1910 sidecar outfit, I should like to say a few words against the wholesale issue of licences to juveniles.

There are many ways of contracting a sudden death. One of these is heart failure. Although an aged man, I do not yet wish to die. But I fear that I may do so quite soon if I am again nearly run down by a headstrong child on a high-powered motor cycle.

Only the other day one of these embryo road hogs flashed past me on an 8 h.p. Sports Zenith, narrowly missing an apple-cart in his headlong rush. He could not have been more than 16 years of age, and must have been doing quite 70 m.p.h.

It is time that a stop was put to these infantile monomaniacs. I cannot speak too strongly against motor cyclists under 20 years of age. N. QUESTON GRAVES.

Sir,—At present I own an old 2½ h.p. Fafnir, about 1909, with a.i.v., to which I fitted a magneto in place of the battery, and I think every boy should learn on an old machine, not later than 1912, to let him see what real motor cycling is. Nowadays it has become merely a matter of changing gear and opening the throttle to climb any reasonable hill, but with an old single speeder of low power it is a very different thing. The original carburetter is a 1909 B. and B., and is very sensitive, and unless the engine is well cared for and well tuned it soon becomes a case of push.

I am 18 years of age, and have been motor cycling for the last four years. "GOOD OLD DAYS."

Falkirk.

[Above are three representative letters from a further large batch on this subject, mainly supporting the schoolboy motor cyclist.—ED.]

### *ARTIFICIAL OBSTACLES IN AN OPEN TRIAL.*

Sir,—Would any person or persons who were actual witnesses of the following occurrences, or any one of them, in the East Midland Centre A.C.U. Open Trial on March 25th, kindly send particulars to me (c/o the Editor), together with their names and addresses, the place referred to in the trial, the time of the occurrence, and if possible the names of those responsible? The occurrences were:

*Lapidosa Hill* (known by another name locally).—Placing of large boulders taken from the road so as to stop up the clear, normal path.

*Gorsey Bank Watersplash.*—Damming the stream (2in. to 3in. deep overnight) to a considerable depth. Throwing in of a fair-size tree branch to drive competitors into the deeper water.

*Little Eaton Quarry Hill.*—Placing large boulders on the only practicable path. Names of those actually responsible for throwing additional boulders while the competitors were actually going up.

I take this opportunity of thanking all those who have already given me their names, etc., and no one need hesitate to write me for fear of publicity, because any information, names, etc., will not be used without the consent of the person giving it. J. A. NEWMAN.

## 12,000 MILES WITH A CHAIN-DRIVEN TRIUMPH.

Sir,—I think the following notes may be of interest as showing what may be expected of a modern high-class machine.

About the first half of the distance was covered solo, the latter half being with a Triumph standard sidecar. The machine has been used every day of the week for short business runs, and during the week-ends for purely pleasure purposes Several trips over some of the Welsh mountain tracks have been made, including towing another machine up part of the famous Bwlch-y-Groes. The machine has, therefore, not been nursed.

*Engine.*—The only replacements have been two piston rings, which, as a matter of fact, were not really required. I have used a K.L.G. and a Lodge plug, putting the Lodge in when I suspected the K.L.G., and *vice versa.* This is the cheapest solution I have come across of the plug changing craze. I have had no valve trouble, but the mechanism is very noisy, and the tappets run dry and squeak. I thought this was an unknown fault. The cylinder and piston have been decarbonised about every 800 miles.

*Sidecar.*—This is, on the whole, beautifully finished, but has some poor detail work. The door handle and the cupboard door constantly rattle. The spring wheel is good, but I think the springs are too strong. The leaf springs have no lubricators at the shackles, and the pivoting at the fore end chatters. The luggage carrier creates such a noise at certain engine speeds that I have removed it. The petrol tin carrier is good, but allows the tin to "drum" in a most unpleasant manner.

The bearings are apparently perfect. I do not like roller big ends, but must admit mine have been excellent so far. A lubricating system and split bearings give much sweeter running.

*Gear box.*—My machine has one of the earlier boxes, which are far from perfect on the change down. The only other trouble has been the breakage of the selector rod plunger spring. This, curiously enough, resulted in the gear shaft sticking. I had a thrilling run home on top in hilly country on a foggy night. After a good deal of search I located the trouble. Why don't manufacturers send out proper drawings so that one can tell what procedure to adopt to get at a part?

The gear box *is* oil tight.

The clutch slips slightly, and I have had no less than three new Bowden control wires. This is not Bowden's fault, as the control is very inaccessible.

*Tyres.*—I have had the most satisfactory results, having bought only one new one, which has just been fitted.

*Spare Parts Service.*—One gets what one wants within a week, but this is surely not prompt enough.

*Petrol and Oil.*—I have not measured the petrol consumption accurately, but it works out at about 60-65 m.p.g. The machine solo would do over 100 m.p.g. Oil works out at about 700 m.p.g.

*Brakes.* — Front doubtful; rear excellent. The method of adjusting the latter is not very safe. The pivot pin slides in a slotted lug and is held in position by friction. The sides of the lug should be serrated, as if one is not careful to do the adjustment up very tightly the pivot slips, and one has no brake at all.

*Wheel Bearings.*—I have had three new sets of front bearings, and one sidecar set. The rear wheel bearings, which are better proportioned, have required no attention.

It will be seen that, on the whole, the troubles mentioned are of a minor nature, and it must be admitted that the behaviour of the machine has been most satisfactory. As far as my experience goes, there is only one car made which would have given less *road trouble*, and many would have given much more.

C. H. STEPHENSON.

## INSTALLING A COMPASS.

Sir,—Losing utterly my sense of direction on a foggy night (20.00 hours) in the back lanes of Hounslow on a non-stop run Torquay-Harrow, I found myself at Kew Bridge instead of Greenford, and vowed solemnly to provide my P. and M. sidecar with an oil compass. I have been experimenting with an ordinary prismatic, and find two probable positions: (*a*) On an aluminium or wooden bar extending upwards 2ft. from the tank so that the compass is under the chin; or (*b*) on the sidecar centrally and in line with the steering head. In these positions the influence of the iron mass of the machine is at a minimum compatible with visibility; but my experiments show error up to 30 degrees when heading north or south. Probably there is some method of compensation, and I should be very glad to hear from any of your readers who have successfully installed a compass on their machines, or to receive advice from your staff.

K. N. HOWARD.

## THE MORE RESPONSIVE RIGHT LEG.

Sir,—I am an all the year round motor cyclist, riding solo through miles of traffic every day; the brake is on the left side of the machine I have used for about three years. I have now got an Indian sidecar, and intend to use both. The Indian foot brake is on right side, and I knew that to use both machines in their ordinary condition was looking for trouble; so, on looking at the solo machine, I saw that I could fit a pedal to the brake which would bring it to the right side, and in the same position as the Indian.

On the first run it was strange for about five minutes, and, after that I felt as if I had always had it there, and that it was, in fact, far more convenient than on the left side. Now the point is this. On looking over *The Daily Mail* recently I read a short article headed, "The Brain in Action," by a Doctor. The following is an extract:—

"As well as being right-handed, we are also right-legged.

"As the muscles of the right arm and leg are more constantly employed and more quickly respond to orders which we know come from the *left* side of the brain, it is fair to assume that the 'centres' there that control them are more highly developed, and in that limited sense we are left-handed."

As this is a matter of fact, I think it should decide once and for all where the most important control (the brake) should go. It should be where the limb best suited to use it is. Another point is that most motor cyclists hope to own cars some time or other, and they will have nothing to unlearn when they get them.

R. L. BOYD.

Fastest single cylinder time on Kop Hill in the recent Essex M.C. hill climb was made by T. C. de la Hay (3½ o.h.v. Sunbeam).

### A RISKY PRACTICE.

Sir,—In answer to Mr. J. Reynolds and "Ruff Rhodes," I should like to say that owing to the perfect balance and the exceptional steering qualities of the 4 h.p. Harley, the control of the machine, with four up, solo, at 40 m.p.h., is very nearly as easy as with only one person on the carrier.

The danger of anything "giving" with such a weight on board I think is very remote, as the 4 h.p. Harley frame is as strong as that of any big twin.

As regards keeping so many "parcels" on the carrier at the speed, I sat on the tank, one sat on the saddle, the other two on the carrier, and no straps or insulating tape were needed.

The original Goodyear tyres are still going strong, and only one, that on the rear wheel, has ever punctured.

Newport, Salop. "FOUR-UP-SOLO."

### TUNING A 4 H.P. TRIUMPH.

Sir,—As a rider of a Triumph, the article by K. H. Leech, B.Sc., has greatly interested me. I'm sure many Triumph riders besides myself would very much like to know

(1) His petrol consumption (with his cam) at about 35-40 m.p.h.
(2) Behaviour of the engine at slow speeds, and
(3) His top gear ratio.

As one who has done 55-60 m.p.h. on a Triumph many times, I think Mr. Leech should have sounded a note of warning as to the danger of speeding on an absolutely standard bike. The riding position, even with T.T. bars, is of the "sit up and beg" variety, and the front forks, though excellent for the purpose for which they were designed, are thoroughly dangerous at speed. Some painful experience has taught me that the first thing to be done before endeavouring to get speed out of a Triumph is to fit "Druids."

If Mr. Leech has ridden at 60 m.p.h., on several occasions, a Triumph with flexible Triumph forks, I raise my hat to him. LLEWELLYN H. BARKER, J.I. Mech.E.

### NON-SKID BIG TWINS.

Sir,—Whilst agreeing with "Velocitas'" conclusions regarding the superior stability on grease of heavy twins, I must beg to disagree with the accuracy of his calculations dealing with the centres of gravity of his examples.

Taking the same two machines, *i.e.*, (1) Big twin, weight 400lb., centre of gravity of machine 15in. from ground, and rider, weight 150lb., centre of gravity in riding position 35in. from ground; (2) 3½ h.p. single, weight 250lb., centre of gravity 13in. from ground, rider's weight and position same as in (1).

Taking moments about the ground line, let $x$ = height of centre of gravity of machine and rider combined.

In (1) $550x = (400 \times 15) + (150 \times 35)$, $\therefore x = 20.45$in.
In (2) $400x = (250 \times 13) + (150 \times 35)$, $\therefore x = 21.25$in.

It will be seen from this that the difference of 2in. arrived at by "Velocitas" is reduced to just over three-quarters of an inch, and in my opinion this is not sufficient to account for the undoubted superiority of the heavier machine.

It is more likely, I think, that the cause is to be found in the greater inertia of the heavy machine.

So long as a motor cycle pursues a straight and undeviating course there is no tendency to skid; as soon, however, as this straight course is altered by however small an amount, forces tending to make the machine skid make their appearance. Of course the larger the deviation the larger the force.

The greater inertia of the heavy machine helps to prevent inequalities of the road surface, etc., having such an effect on the machine's course as they do on that of the lighter machine, and so renders it less liable to skid.

This theory also explains the success of those people who, having nerves of iron, on sighting a patch of particularly greasy-looking surface open the throttle half an inch or so and proceed to cross it at speed, holding the bars absolutely rigid, and apparently experiencing no difficulty whatever, while the ordinary mortal like myself shuts down and takes it slowly, and possibly has to steady with the feet also.

A. R. TURNER.

### FROM HUB TO COUNTERSHAFT GEAR.

Sir,—On the Coventry road at Stone Bridge on a recent Sunday I noticed that I was not by any means the only one who has fitted an old Triumph with an Albion 3-speed countershaft gear. I should like to know the experience of other riders. I have received excellent service from mine, and can thoroughly recommend the conversion. H.A.P.

Birmingham.

### COMPLICATED COASTING.

Sir,—With reference to Mr. Walker's query on the subject of coasting, I consider the following is the best and simplest method:

Lift the exhaust valve lifter and close the throttle; this will enable the engine to cool reasonably, and will facilitate starting by just dropping the exhaust valve lever. Experience has taught me that no trouble will arise through burnt valves, providing they are of good quality. I can assure Mr. Walker that this is the most popular method of coasting the average hill. G. S. THIRSK.

### UNWRITTEN ROAD LAWS.

Sir,—Referring to the paragraph entitled "Preparing to Overtake," by "Ixion," surely, if "Ixion" was overtaking the cart, and the unknown Indian rider coming towards them, the latter was on his right side, viz., left.

Should not one give way in such a case, when, of course, the obstacle is seen? E. SEYMOUR.

[Our correspondent is correct in his general assertion, but in this case the unknown rider had apparently cut across the front of the cart, from his wrong side, at the last moment.—ED.]

### TWO-STROKE EFFICIENCY.

Sir,—In regard to the letter of "R.T.F.," may I point out that the statement that "the temperature of the cylinder walls will remain constant" is incorrect.

Since the ratio of volume of the cylinder to surface exposed to the flame is greater in larger cylinders than in small ones, the heat flow, per unit area, through the walls will be larger also (assuming a constant maximum temperature). Thus, the wall temperature will be higher, since

$$\text{temperature drop through walls} = \frac{\text{heat flow per unit area} \times \text{thickness of wall}}{\text{coefficient of conductivity}}$$

This is the reason why large cylinders are more difficult to design than smaller ones, and why there is a limit to cylinder size with present-day metals and lubricating oils

Newcastle-on-Tyne. H.V.S.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

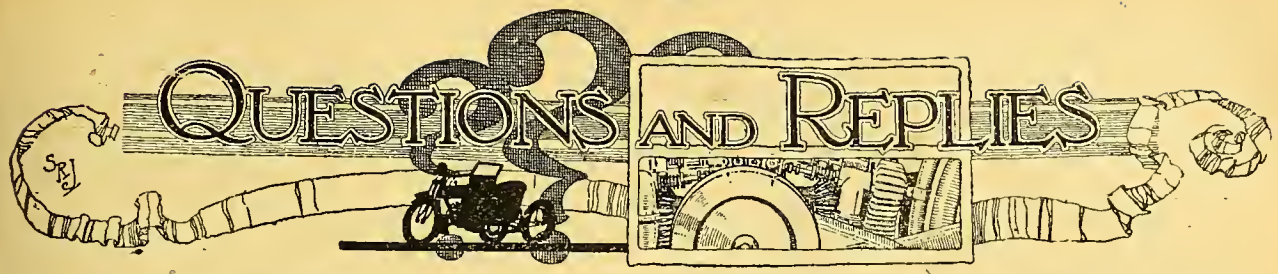
**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "IXION," of *The Motor Cycle*.
Price net, 5/-. By post, 5/3.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### CHARGING ACCUMULATORS WHEN NOT IN USE.

Does an accumulator run down when out of use if not constantly recharged?—D.C.

Yes; they become discharged gradually. Accumulators should be charged at least once every six weeks even when not in use.

### OILING AND SOLO GEAR RATIOS.

Please enlighten me on the following points in connection with my 1920 4¼ h.p. B.S.A. motor cycle: (1.) How often should I oil with the drip feed? I am giving about one pump per five miles solo and four sidecar (the engine seems to carbon up very quickly). (2.) What maximum speed solo can I expect? My gear is 5 to 1. (3.) Would a slightly higher gear be more comfortable for solo riding?—A.P.F.P.

The frequency of lubrication is a matter of experience; it would appear, however, that you are giving rather too much. One pumpful per ten miles solo and one in five to seven with sidecar should be sufficient. You should obtain about 45 m.p.g.; though the machine might be geared 4¾ to 1 for solo work, it is doubtful if you would obtain much advantage from the change.

### NO ACCELERATION OVER 20 M.P.H.

My 1918 4 h.p. Douglas runs with delightful smoothness up to about 20 m.p.h., and runs smoothly down to 6 or 7 m.p.h. on top gear, but when the throttle is opened to increase speed or on a hill the engine appears to be choked, fires irregularly, and shows scarcely no increase of power. The petrol level and carburetter appear to be correct, with 28 jet; the trouble is just the same with 30 jet. Engine starts very easily.—F.K.R.

The symptoms you describe are consistent with bad carburation, and it is possible that the carburetter is apt to flood at high speeds owing to the needle valve being worn. A partial obstruction of the petrol supply or an air lock in the petrol tank would have a similar effect. It is also possible that your magneto is timed too late. The usual setting is to fix the magneto with the points just breaking, the ignition control being two-thirds retarded and the piston on top dead centre.

## Important Dates.

**Sat., Mar. 25th, to Sun., April 9th—Tour de France.**

**Sat., April 8th—B.M.C.R.C., Members' Meeting at Brooklands.**

**Fri., April 14th—The Richmond Meet (Yorks.).**

**Fri., April 14th, and Sat., April 15th.—M.C.C. London-Land's End Run.**

**Sat., April 15th, and Monday, April 17th—Western M.C.C. (Glasgow) Two Day Trial.**

**Sat., April 22nd—N.-Eastern Centre A.C.U. Open Reliability Trial.**

**Sat., April 29th—S. Midland Centre A.C.U. Open Hill-climb.**

**Sun., April 30th, to Sun., May 7th—Paris-Pyrenees Trial.**

**Mon., May 1st, to Sat., May 6th—Scottish Six Days Reliability Trials.**

**Sat., May 6th—B.M.C.R.C. Members' Meeting at Brooklands.**

**Sat., May 13th—Northern Centre A.C.U. Open Reliability Trial.**

**Sat., May 20th—S.-Western Centre A.C.U. Open Reliability Trial.**

**Tues., May 30th—Junior Tourist Trophy Race.**

**Thurs., June 1st—Senior Tourist Trophy Race.**

**Fri., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**

**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**

**Sat., June 10th—B.M.C.R.C. Open Meeting at Brooklands.**

**Sat., June 17th—Yorkshire Centre A.C.U. Open "Colonial Trial."**

**Sat., June 17th—Ealing and Dist M.C.C. 200 Mile Sidecar Race, Brooklands.**

**Fri., June 23rd, and Sat., June 24th—Irish Twenty-Four Hour Open Trial.**

**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**

**Sat., July 1st—East S. Wales Centre A.C.U. Open Speed Trials.**

**Wed., July 5th—Eastern Centre A.C.U. Open Speed Trials.**

**Wed., July 12th—French Grand Prix.**

**Sun., July 23rd—Belgian Grand Prix.**

**Fri., July 28th, to Mon., July 30th—Anglo-Dutch Trial in Holland.**

**Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.**

**Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.**

**Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.**

**Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.**

**Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.**

**Sat., Sept. 23rd—500 Mile Race at Brooklands.**

### A CHASSIS REPAIR THAT FAILED.

Last month I had the misfortune to break one of the tubes on the chassis of my sidecar. This was repaired by inserting a liner in the tubing and brazing. On the journey home, before I had proceeded twenty miles, the repair gave way, necessitating my shedding my passengers, and sending them home by rail. I was naturally annoyed, and on reaching town stopped the cheque given in payment for the repair, and I have had to purchase a new sidecar chassis. The repairers now threaten me with proceedings, and I would be glad to know whether I am within my rights in refusing to meet this cheque.—W.G.

In order successfully to resist the payment you would have to show that there was actual negligence on the part of the repairer; this is a practical point on which you should get the opinion of an expert. The repairer would be able to take out a County Court summons in his district, and having regard both to the time which you would have to spend in defending the case and to the smallness of the amount, it might be simplest to pay the claim or to try to effect a compromise. On the other hand, if you can clearly show that there was absolute negligence on the part of the repairer, and that the repairer well knew when he entered into the contract that he was repairing the tubing in order that you and your family might return home, then there would be a counter-claim for the damage sustained. However, you should bear in mind that it is quite possible that the repairer did what he considered his best for a temporary repair, and he may have had some grounds for considering that it was reasonable to expect that it would last for your journey.

### SHAFT DRIVE.

Is there any drawback to shaft-driven motor cycles, as I do not see many on the road in our part of the country (Staffs.)? What is the reason for there being so few of these machines on the road?—J.K.

There is no particular drawback to shaft drive, and in many ways it has decided advantages over all other methods of transmission; but there is only one make of motor cycle on the market on which it is employed (the F.N., made in Belgium).

With the average big single-cylinder or V twin machine the fluctuations in torque impulses necessitate the transmission details being unduly heavy with such a rigid form of drive as shaft and gearing, hence it is chiefly suitable for use with engines having particularly smooth torque, such as three- or four-cylinder units or two-cylinder two-strokes.

## READER'S REPLY.

### MOTOR CYCLES AND NERVES.

In answer to "Not yet Beaten's" inquiry in the issue of March 23rd, I think that, if he will make inquiries of other motor cyclists who have taken to sidecar driving after riding solo for some time, he will find most of them have experienced the same trouble. Before I tried my first ride on a sidecar I had been warned not to try to balance it, but in the excitement of the moment this good advice was thrown to the winds, and consequently I promptly "shot off to the right," and incidentally into the kerb. Next time, however, having learned a lesson, I managed quite well. Perhaps, if your correspondent will give up all inclination to balance the outfit and steer, say, as if it were a car, he may be attended with like success. Anyhow, I wish him the best of luck as company on tour greatly enhances the pleasure.—XF61.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.*

"H.J.H." (Reading).—1920-21 8 h.p. countershaft model, Zenith sidecar.

"H.P.E." (Bedford).—2¾ h.p. sports model A.J.S.

"J.B." (Leith).—4¼ h.p. Beardmore-Precision.

"W.S." (Sheffield).—Binks & Atmos carburetters on 8 h.p. Enfield-Jap: Jet sizes and settings.

"W. M." (Fife).—3½ h.p. Norton and 3½ h.p. Zenith-Bradshaw: General comparisons.

"Beam" (Yeovil.—3½ h.p. sports Sunbeam: Consumption, advantage of W.S.R. jet adapter, petrol-benzole mixture; any other hints and tips.

"C.D.W." (Finchley).—2¾ h.p. Wooler, chain drive model: General performance, special tips, eliminating oil leak behind engine sprocket.

"T.E.S." (Sandycroft).—Jet sizes for Binks carburetter on 2¾ h.p. Douglas: Consumption and speed.

"L.S.J." (Aldershot).—Best non-skid tyres on chain-drive Triumph; advisability of 28×3in.; hints on rendering brake less fierce.

"C.R.P." (Doncaster).—3½ h.p. Brough; A.B.C.; and Scott Squirrel.

"C.N." (Seven Kings).—W.S.R. adapter on pilot jet B. & B. carburetter, also best carburetter on 1921 Matchless-Mag.

## SPARKLETS.

### In Belgium.

One of the first trials in Belgium during this year for the Coupe de la Meuse took place last month, and the award was carried off by M. Tayman (4 Triumph sc.).

### Motor Cycles beat Car Uphill.

At the conclusion of a recent hill-climb at Pretoria, several Norton riders anxious to try their pace organised an impromptu time trial over the course, which was rough and had a stiff gradient. The fastest speed was an average of nearly 48 m.p.h. The times were: Dr. A. L. du Toit, 37⅘s.; P. Flook, 38⅘s.; L. van Bergen, 40⅗s.; C. W. Bower, 42⅘s. These riders were all mounted on Norton machines. The fastest time in the car class was made by a Vauxhall in 41s.

### Found on the Road.

The finding of a tool roll on the old Birkenhead-Chester road on March 12th is reported by Mr. W. K. Woodward, Moor Cot, Tower Road S., Heswell, Cheshire. He believes that it fell from a Norton machine.

### Motor Cycles for R.A.C. Guides.

In the windows of Stratton & Instone, Pall Mall, London, S.W.1., are to be seen two 4¼ h.p. B.S.A. motor cycles enamelled in R.A.C. blue, with the club's initials on the side of the tanks. They are for use by R.A.C. road guides.

### Spare Valves.

Those who require spare valves for old engines should get into touch with the Leamington Valve Co., of Clinton Street, Leamington Spa. This old established company can supply any design of valve and will use material to a given specification.

### A New Make Foreshadowed.

Having severed his connection with the Massey-Arran Motor Co., Ltd., Mr. A. Massey, in association with several people well known in the motor cycle trade, will shortly commence to market a range of machines known as the Massey motor cycles.

### Echoes of Recent Trials.

K. Don (3½ Norton) has had his protest upheld regarding his stop on Kop Hill in the Stock Machine Trial, and is therefore awarded a special certificate of merit (his machine was equipped with a front stand). G. H. Kirby (3½ Triumph) was not amongst those who stopped on Kop in the same trial—his only shortcoming was the absence of a front stand.

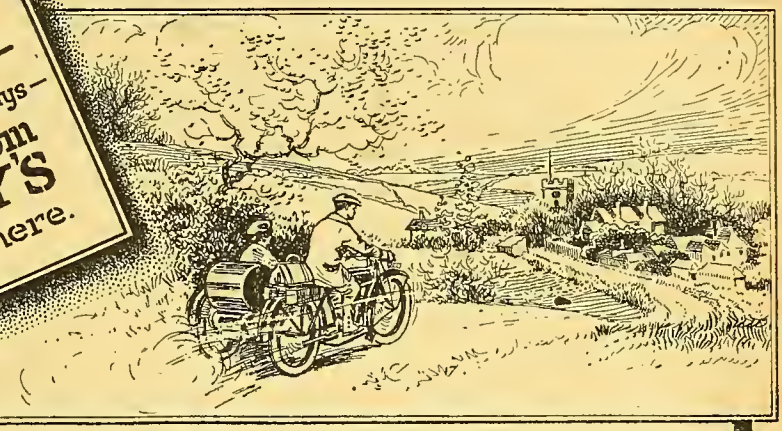
In the Victory Cup trial J. A. Newman (3½ Douglas) claims that his stop on Sandy Lane was not due to petrol tap being turned off but to an air lock in the tank; the same rider gained a gold in the Colmore Cup Trial and not a silver as first announced.

SCENES ON THE *TOUR DE FRANCE* TWELVE DAYS' TRIAL.

How the French say "au revoir." Bergen (Velocette) on the right receiving a salutation before starting out one morning.

Two Harley-Davidsons passing through the historic town of St. Germain in the early stages of the trial.

# At Easter —as always— A Machine from GODFREY'S will take you anywhere.



THE FOLLOWING 1922 MODELS ARE AVAILABLE FOR IMMEDIATE DELIVERY. WHETHER YOU ARE A BUYER AT THE MOMENT OR NOT, WE SHALL BE PLEASED FOR YOU TO CALL & INSPECT OUR WONDERFUL SHOW OF MACHINES. IF YOU CANNOT CALL WE SHALL BE ONLY TOO PLEASED TO SEND YOU FULL LISTS ON HEARING FROM YOU.

R.H.S

# OFFICERS' ARMY TRENCH COATS

## AT 70/- EACH

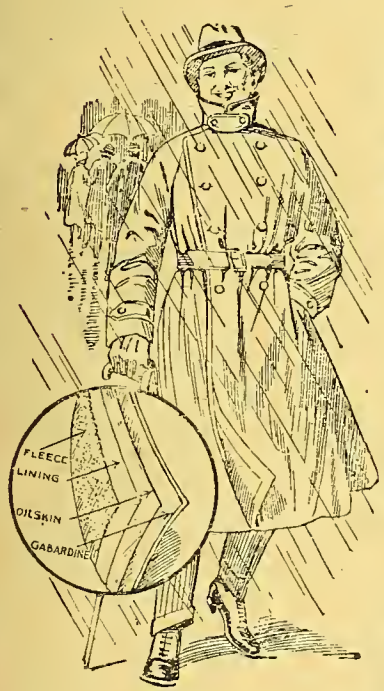
## (Without Detachable Fleece Lining 55/- each.)

*Carriage Paid in United Kingdom.*

## Reduced from 75/-, at which price over 25,000 have been sold in the last 5 months.

On January 16th we announced a special sale of our Officers' Army Trench Coats at 70/-. So great was the success of this sale that although the individual profit was less, the aggregate profit was greater than formerly. We have therefore decided not to revert to the old price but to continue to sell this magnificent coat at 70/-, thus acting in accordance with the spirit of the times and carrying out our business principle of giving the public the utmost value for money.

**Quite 60% below present-day prices.**
**These goods can never be duplicated at the price.**



Brand New. Triple-proof Gabardine, Check Lining, OILSKIN *INTERLINING*, and with detachable ALL-WOOL fleece lining. FOUR COATS IN ONE. These Coats are made from guaranteed Government materials, by Contractors who made thousands of Officers' Army Trench Coats during the war. This is the only Coat made THROUGHOUT with Surplus Government materials **which we control.**

**When existing stocks of Government material are exhausted (which at the present rate of sale will be in from 3 to 4 months), it will be impossible to buy a genuine officer's army trench coat at anything like this price. There are no REAL Officers' Army Trench Coats on the market approaching it.**

### POINTS FOR TRENCH COAT BUYERS.

1. A Genuine Officer's Army Trench Coat made THROUGHOUT with Government Surplus materials will last for years. An inferior one will "crock up" in a few months.
2. See that the fleece lining is ALL WOOL.
3. See that the fleece lining extends down the sleeves to the wrist.
4. See that the interlining is oil skin or oil cotton and not a rubber solutioned fabric which is perishable.
5. See that you deal with a "MONEYBACK" Firm, so that if the coat does not meet with these requirements you can demand a refund.

### OUR GUARANTEE.

We guarantee this coat to be as described above, and that the description is in no way exaggerated. If the customer is not satisfied with his purchase we guarantee to return his money in full without question, provided the coat is returned undamaged within seven days of purchase.

### MONEYBACK PRINCIPLE.

All our business is conducted on the "Moneyback" principle. Inasmuch as a Mail Order Customer has no opportunity of inspecting his goods before purchasing, this is the only fair and satisfactory way of conducting a Mail Order Business. Mail Order Customers should always insist on a "Moneyback Guarantee" before parting with their money. An announcement such as ours forms a legal contract between the Seller and the Purchaser, and therefore fully protects the latter.

THE PRESENT WHOLESALE PRICE OF COATS EQUAL TO THESE, FROM CONTRACTORS NOT IN POSSESSION OF THE SURPLUS GOVERNMENT MATERIAL IS 105/- EACH.

When ordering, state height and chest measurement *over waistcoat*. CHEST SIZES 34, 36, 38, 40, 42, 44 ins. Also state whether coat is required in Military style or adapted for civilian wear. In the latter case, shoulder straps and brass D's on belt are omitted.

*Cheques, Money Orders, and Postal Orders should be crossed Barclays Bank, Limited. Treasury Notes should be registered.*

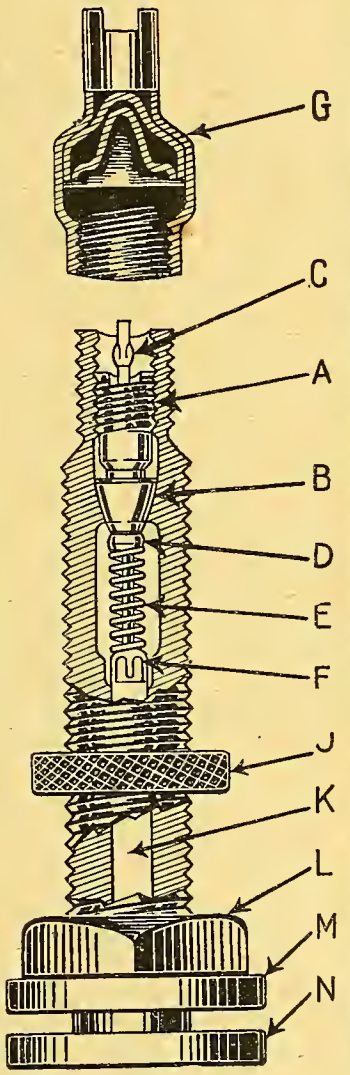
# Schrader Universal

BRITISH MADE **TYRE VALVE**

## Everything a tyre valve should be

The "Schrader Universal" is everything a tyre valve should be. Airtight; easy to pump; the air inflated stays in, therefore less work than with the old type valve. Simplicity; no joints to leak and no nuts to screw on. The valve proper—the inside—is self-sufficient. Reinforced and kept clean by the patent doubly-crowned valve cap. Fitted as standard by the leading Tyre Manufacturers of Great Britain and U.S.A, Spares and replacements from all good dealers.



*Sectional View of the "Schrader Universal" Motor Cycle Tyre Valve.*

G.—Valve cap. Slotted end is used for removing or screwing down valve "inside." C.—Central Pin of inside to which "D" is attached. A.—Screwed locking plug, with lugs for slots of valve cap. B.—Rubber-faced seating cone. D.—Cup seating for "B." E.—Spring. F.—Spring abutment. J.—Rim nut. K.—Air passage in body. L.—Locking nut. M.—Ring washer. N.—Head of valve stem.

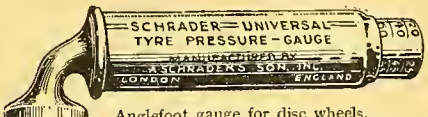
## TYRE PROTECTION

The life of your tyres depends on their inflation pressures. Comfort in riding depends on inflation pressures. There is a mean between these two figures which will achieve both economy and comfort. Pressures cannot be guessed. The little sturdy

**"Schrader Universal" Tyre Pressure Gauge**

will record exactly the air contents of your tyres—pounds per square inch—and so insure that you inflate correctly.

For "Schrader Universal" Valves, price 7/2.
With adapting footing for other valves, 7/9.



Anglefoot gauge for disc wheels.
For "Schrader Universal" Valves, price 8/3.
With adapting footing for other valves, 8/10.
High Pressure Anglefoot, 10/7.

**POST FREE**

*Our "Table of Correct Air Pressures" gives tyre pressure for all standard sizes from information supplied by the World's Leading Tyre Manufacturers. It will be sent post free on request. Write TO-DAY for it.*

# CHEMICO

**CHEMICO REPAIR OUTFITS**

PUNCTURES are like accidents, they *will* happen, even with the best of tyres, and it is when they have happened that you generally remember you left the remedy at home. Carry a CHEMICO Repair Outfit in your pannier, and be sure of having everything necessary for tyre repairs with you, neatly packed in a strong metal case. There are several styles to choose from, and at Chemico 1922 reduced prices, all represent the best value for your money that you can obtain.

**Be on the Safe side!**

**CHEMICO BLOWOUT PATCHES**

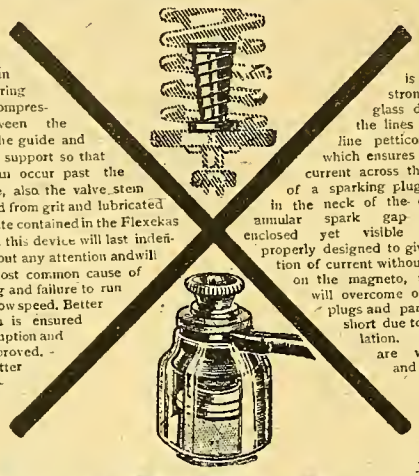
CARRIED in your pannier will save a tyre. They are simplicity itself and can be fixed by a novice without any trouble, by following the directions given on every patch. Once fixed, no load is too heavy, no strain too great, to test a repair effected with a CHEMICO Blowout Patch. The Patches are obtained in four sizes at most Garages, no other emergency device for tyres is so simple or so cheap —get YOUR supply to-day.

*THE COUNTY CHEMICAL CO., LTD. BRADFORD STREET. BIRMINGHAM.*

*Highest Quality & Value*

# FLEXEKAS

Flexekas is simply an airtight spring fitted in compression between the bottom of the guide and the spring support so that no leak can occur past the valve guide, also the valve stem is protected from grit and lubricated with graphite contained in the Flexekas Once fitted this device will last indefinitely without any attention andwill cure the most common cause of bad starting and failure to run evenly at slow speed. Better carburation is ensured and consumption and power improved. Valve clatter is also eliminated.



Sparxekas is a dome of strong tempered glass designed on the lines of an H.T. line petticoat insulator which ensures no leakage current across the insulator, of a sparking plug. Embodied in the neck of the dome is an annular spark gap completely enclosed yet visible externally; properly designed to give amplification of current without any strain on the magneto, this device will overcome oiling up of plugs and partial internal short due to dirty insulation. Sparxekas are very neat and give a striking effect.

# SPARXEKAS

**FLEXEKAS fit any engine and are supplied with special heatproof graphite paste at 2/6 per valve. Extra cartons of paste to be used when overhauling are 1/6 each.**

**SPARXEKAS fit any plug and are supplied complete and ready for fitting under existing terminal nut at 2/6 per plug.**

**SPEEDOMETERS** for Motor Cycles

H.G.

TO MOTOR CYCLE MANUFACTURERS and ENGINEERS
**CLIMAX TWO-STROKE ENGINES.**
A unique opportunity occurs for a Motor Cycle Firm desirous of taking up the manufacture of their own proprietary engine, to acquire the Design, Patterns, Dies, etc., for the production of this most successful Two-stroke Engine.
The sound mechanical construction of these engines has been demonstrated in many important Trials and Races. We have had NO MECHANICAL FAILURE in any competition.
The high efficiency to which this engine has been brought is proved by the fact that we hold **MORE LONG DISTANCE RECORDS AT BROOKLANDS than all other two-stroke engines together.**
Mr. J. F. NEWEY, the designer, will, if desired, place his valuable experience and research with two-stroke engines at the service of the purchaser.
To a firm out for a leading position with this type of engine, and able to develop the same commercially, this is undoubtedly a most favourable proposition.
THE NEWEY ENGINEERING CO.,
36, Ashted Row, Birmingham.

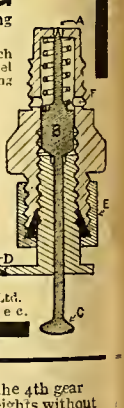
# EASY STARTING
**and Better Running is Assured by Fitting a "PROUD" Variable Jet.**



For **Starting,** press knob "C" smartly, which raises Plunger "B," forcing a spray of fuel through Jet "A" at high pressure, causing instant vaporisation.
**Choked Jets** are cleared in the same manner while riding.
**The Size of Jet** is also varied while riding by moving lever "D," allowing you to get the best results from your engine at all times.
For AMAC, B. & B. and SENSPRAY **8/4**
(Post free by return.)
*When ordering send old Jet and Holder as pattern, and give name and address of your Motor Agent.*

# BRICO

TRADE MARK

**BRICO PISTON RINGS prevent the sooting of sparking plugs—and loss of POWER.**

A sparking plug taken from a BRICO equipped engine speaks volumes for the efficiency of BRICO Rings

It is always tinged with that light, reddish deposit which indicates perfect combustion and no leakage of oil—never, when BRICO Rings are used, will there be thick grease due to leaking oil, unless the cylinders are scored. BRICO Rings fit tight between the piston and the cylinder walls, leakage isimpossible.

Perfect compression and maximum power go hand in hand with BRICO Piston Rings

All A.J.S. T.T. WINNERS USED BRICO RINGS

*There is a BRICO Ring for every Engine* in stock at all Dealers, Agents, and Garages. Let BRICO Rings 'ginger up' your Engine.

*Don't just ask for a Piston Ring —— Ask for a BRICO and get the BEST.*

Pronounced "BRYCO"

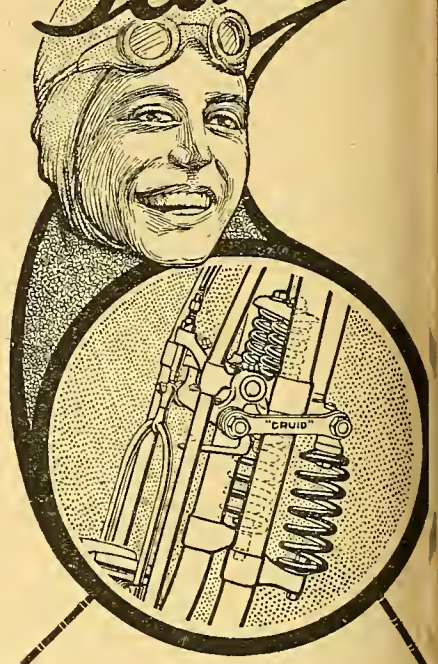
# ALEXANDER'S

**113-115, Lothian Rd., Edinburgh**

**272-274, Gt. Western Rd. Glasgow**

# Compelling Features



## "Self-contained"

The DRUID Fork is "Self-contained."

This means that all shocks encountered are completely absorbed within the fork itself—none being transmitted to any other part of the frame.

DRUID Springs are not anchored to any member of the frame, but ONLY to the unsprung portion of the fork itself—therefore any vibration which the springs do not take up returns to the front portion.

Illustration shows this principle as applied to the DRUID Mark II—the model with dual springing for vertical and horizontal shocks.

## Prompt Deliveries

The Season's motorcycling will be safer and more enjoyable if your machine is DRUID-equipped.

**A. DREW & CO., Limited, Leopold Street, Birmingham.**

# DRUID FORKS

R.H.S.

# READY FOR IMMEDIATE USE

**All the machines listed here, both new and secondhand, are actually in our Showrooms and are available for use at once. Those that are not already "tax paid" can be registered and provided with licence and number plates written within two or three hours. We can also issue immediate insurance cover and can supply and fit from our own comprehensive stock all accessories such as Lamps, Horns, Speedometers, Hoods, Windscreens, etc., etc.**

F.N. 2½h.p., touring Model A, 2-speed, handle-bar control clutch, kick atart, new; £55.—Croydon and District Agents, Pulling's Garage, London Rd., Croydon. 'Phone: 1619. [6954

F.N., the wonderful 1922 £95 model, 7h.p., 4-cyl., gate change, car tyres, one actually in stock.—'Phone: Hampstead 2012.—Wire or call, Delancey St. Garage, Camden Town, N.W.1. [7900

LANGFORD'S, 37, Cricklewood Broadway, London, N.W.2.—1922 8h.p. 4-cylinder F.N., with new o.h.i.v. engine, 3-speed gear, and no-trouble shaft drive; £135. Lightweights, £55 and £72. Highest price for your present machine in exchange. [8204

*Spare Parts:*

F.N. Spares.—We can supply for all models from 1904. Prompt attention to enquiries. Please send frame number and stamp for reply.—Langford's, 37, Cricklewood Broadway, London, N.W.2. [8205

### Francis-Barnett.

1920 Francis-Barnett, 2¾h.p. J.A.P., 2 speeds, kick start, hand clutch, appearance and condition as new; £40.—Hucklebridge, 133, Sloane St., Chelsea. [7461

### Grandex.

GRANDEX 1915 Lightweight, 1¾h.p. Precision engine, 2-speed, splendid running order, tax paid; £19.—Atkins, 246, High St., Barnet. [7677

### Griffon.

1917 Griffon 4h.p. twin, tyres new, Saxon forks, hardly been used; wants magneto and carburetter; £14.—52, Manor St., Clapham, S.W.4. [8047

### Haden.

1921 Haden-Precision, brand new, 3½h.p., handle-bar clutch and kick starter.—Rhind and Co., Stone Place, Rusholme, Manchester. [8221

### Harley-Davidson.

1918 7-9h.p. Harley, new condition; £70.—Ross, 86, High Rd., Lee, S.E. [7923

SHEFFIELD Agent for Harley-Davidsons; from £120.—Stacey, 12, Ecclesall Rd. [0577

## Suggested New Motor Laws.

FOR long it has been recognised that existing laws concerning motor vehicles are out of date. The Government has realised this, but, before making drastic revisions, wisely instituted a committee to investigate every item from the standpoint of present-day needs. This committee's report has now been made public, and extracts from the sections affecting motor cyclists are given on page 473 of this issue.

The report reveals the views of actual road users, and, even if it is not possible to agree completely with all the recommendations, it is satisfactory to know that motorists and motor cyclists were represented on the committee.

We refer chiefly to the proposal to abolish the speed limit and to inflict very severe penalties for offences of driving to the common danger. It is feared that, if the proposals are adopted, too much power will be placed in the hands of the police. We have frequently advanced our view that a raised speed limit would be preferable to a law which is open to unreasonable interpretation on the part of biassed individuals.

Incidentally, the suggested abolition of the speed limit applies only to motor cycles and touring cars fitted with pneumatic tyres. If not thus equipped, it is intended that the speed limit remain at 20 m.p.h.

It is interesting that the Commissioner of Police disagrees with the total abolition of the speed limit, as he does with several other proposals of the rest of the committee.

A very sensible recommendation in the report is that the police, in instituting proceedings for a technical offence, should have regard to the object with which the regulation was made, and avoid regarding the mere breach of the regulation as being necessarily an offence in itself. The absurdity of the present-day position regarding baffle plates in silencers comes under this heading.

That it is proposed to make rules of the road part of the law will be regarded with satisfaction. At present these matters are merely courtesies of the highway. The question of passing tramcars, too, is covered by the report.

Every type of road vehicle is dealt with in the report, and, taken generally, the recommendations are sound and their adoption very desirable. It will, however, be some time before any new regulations are made law, and in the meantime certain revisions may be expected.

---

## Spring!

ALTHOUGH the use of a motor cycle is by no means limited to the finer months of the year, yet there are many riders who regard the pastime as a seasonal one and who therefore are now bestirring themselves, furbishing up their mounts and preparing for the open road.

Those who use their machines either for business or pleasure throughout the whole year—and they are in the majority—have already had some excellent enjoyment from the fine weather and dry roads with which we have been favoured even before winter was ended; yet even they will feel an awakened joy in the knowledge that spring is here—with its warmer sunshine, flourishing wild-life of the country-side, and lengthened evenings. The present year was heralded with a promise of being fuller than the preceding one, and, despite unrest in certain directions detrimental to the well-being of the motor cycle industry, it is already bearing out its early promise. The pastime has never been more popular and organised competitions never better supported—and the programme is a full one.

An Index to the advertisements in this issue will be found on the page facing the back cover.

BY IXION

## Solved?

IT was very wet. It was very cold. The road was unknown to me. The dark was intense. My only source of light was an electric head lamp. As I slithered cautiously round a greasy corner under some trees, the world quite suddenly went jet black, and remained so. By dint of peeping with such fitful light as a few matches shielded between my palms could produce, I found that everything visible was apparently in order, and decided that the bulb of my head lamp had gone phut. Fortunately there was a spare in a shaving soap tin in my pocket. With the penultimate match I tackled the lamp. Woe! It was of the type by which the sole access to the interior is by removing the front lens; and the front lens was secured by a split spring ring. I knew how to get the ring out. You just prise it out with a penknife. Did so. Inserted new bulb. World illumined once more. Now to replace the split spring ring. It whirred away several times into the mud. I got crosser and crosser. Finally—happy thought! *Electric bulbs don't blow out!* Why not proceed with lens in pocket? Did so.

Next morning, the Editor being absent, I experimented with that split spring ring in the secrecy of my office. I am glad I don't have to fit up those lamp lenses for a living—on piece rates. But, anyhow, I believe I know how they are meant to go in. Mine is in at last anyway. I pushed the lens well over to one side of its bed, inserted a tip of the ring, and then pushed it hard into the gap, holding the lens and its bed stationary. The last inch or so was a struggle, but all's well that ends well, and my next lamp shall have a hinged or screw front. Unless, of course, its bulb is removable from the tail end.

## Simple Fourwheelers.

I NOTICE that several correspondents are displaying marked interest in some of the cheaper cycle cars. And no wonder. You can buy certain of them new for much less than the price of a new 8 h.p. sidecar outfit, and second-hand at proportionately lower figures. An 8 h.p. two-seater at round about £100 must always be attractive. Their second draw is that both occupants enjoy a proper seat and such weather protection as goes with sitting *in* something instead of *on* something. Many readers must wonder why these remarkably cheap and handy fourwheelers do not sweep the sidecar right off the road. There are several reasons. The first is that none of them have ever been properly pushed. It is partly the fault of their makers, who seldom adopt a live publicity campaign; it is equally the fault of the clubs, who organise competitions fit only for chamois, whereas the cheap cycle car by comparison fits the needs of much quieter folk, and would not invariably show up well in a freak trial. The second is that these machines have no reverse, and are uncommonly awkward to turn round. They are too low to be nice to push, and if they were higher their solid back axles generate incredible friction when the helm is locked hard over. The third is that they have very narrow tracks, which makes them lively on bad surfaces. The fourth is the silly fashion in which the Government taxation scale handicaps the cheap four-wheeler as contrasted with the more expensive types of three-wheeler. If the first and the last difficulty can be met, these machines would sell very freely to people who can dispense with a reverse and who either confine their rides to goodish roads or do not mind being bounced about. I am sure it is high time that somebody organised a trial to show what such machines *can* do. They cannot do all that a sidecar outfit *de luxe* can do, and they have never had a chance to demonstrate their undoubted merits. If I were selling them I would run a big fleet through the Exeter, Land's End, and Edinburgh runs, which are well inside their compass. They all deserve to be much better known.

## From the Khyber Pass.

YES, the Blue 'Un is lovingly perused on the north-west frontier of India. So a kindly soldier sends the following cutting from the advertisement columns of the local print:—

IF YOU WANT A REALLY GOOD BIKE
You Cannot Do Better Than Go In For A
DE DION BOUTON
*PUSH* BICYCLE.

British pedal cyclists will please note the broad-mindedness of the distant Pathan.

## Mechanical Oiling in Frosty Weather.

MY recent question anent the behaviour of mechanical oilers in Arctic weather was really prompted by an experience aboard a friend's car equipped with a somewhat similar system. A mechanical pump delivered oil under pressure to a sight feed, from which a gravity pipe ran to the crankcase. In winter he encountered persistent trouble forward of the sight feed. As far as the glass, the feed was under pressure and O.K. But the thick oil, which he fancied, would not surrender to gravity when it was cold, the glass filled up, and presently the oil welled out through the venthole in

**)ccasional Comments.—**

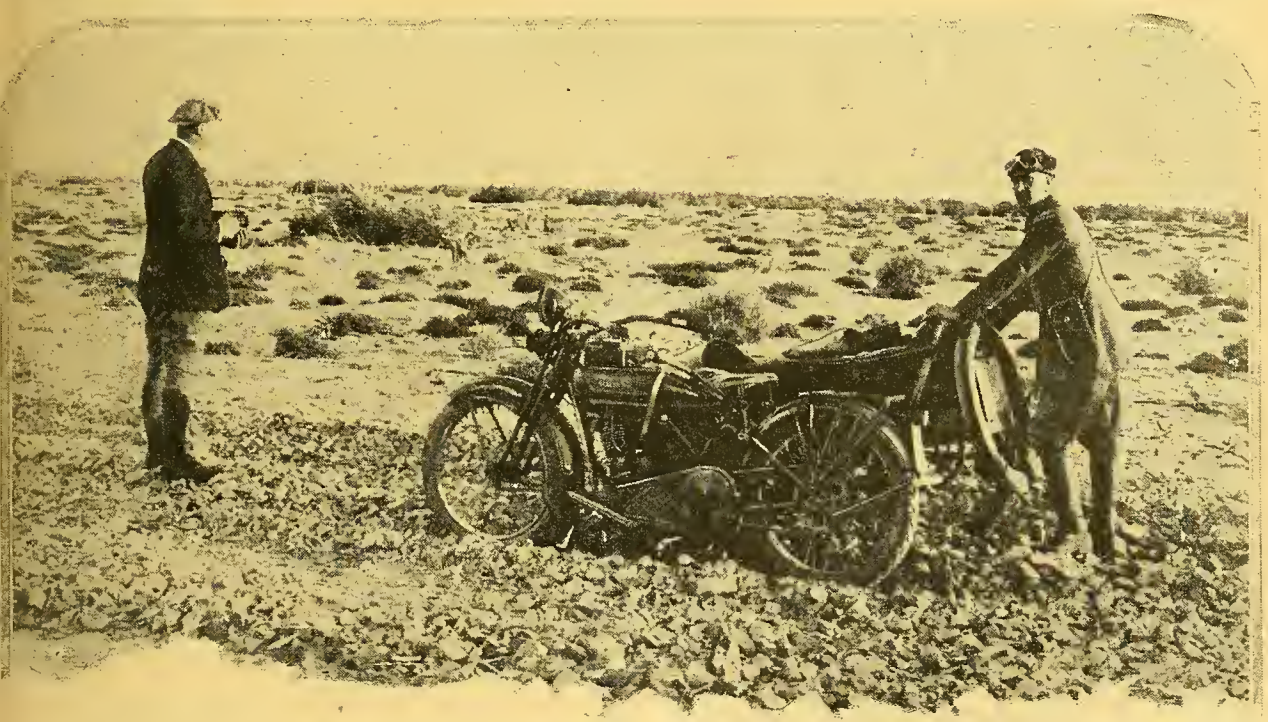
he top of the sight feed, "and so the poor engine ıad none." I was curious to know whether motor 'yclists are experiencing the same trouble with similar ayouts. My postbag indicates that they are not—ndeed many users of such pumps as the Best and the Showell tell me that right through the cold months hey continue to use the thickest summer oils with ɔerfect ease. Occasionally their sight glasses fill up, ɔut the pressure behind the lubricant is so great that it presently goes on to the engine. Possibly a helpful factor is the shortness and straightness of the pipe ɔetween their sight glasses and the engine; on the ɔar referred to above, this pipe was nearly 5ft. long, ınd included four rectangular bends—a particularly foolish bit of design.

## Simplifying Decarbonisation.

THE other day I received a sample "Vril stick." This quaint term identifies a wire brush intended to be spun in a brace for decarbonising the combustion head of a one-piece cylinder, and it is centred by a cone which fits into the compression tap orifice. There is nothing new under the sun. The R.B. Engineering Co., of Didsbury, Manchester, who make the Vril stick, may be interested to hear that when I last changed houses the scrap heap was enriched by a similar brush of unknown origin, sent to this office some fifteen years ago. It decarbonised many engines before its wire bristles at last gave up the ghost, and enabled me to get a polish on a part of the engine which is often rather sooty after we have done our best with a chisel. I wish the Vril an equal lease of life.

## Dr. Coué at Brooklands.

WHEN I can get away from the office for a day or two, I have distinct highbrow tendencies, and old Brown coaxed me last night to attend a lecture on the methods of Dr. Coué, which I understand are all the rage amongst unhealthy people (being a motor cyclist, I am perfectly healthy, thank you). I gather that being ill nowadays is quite a picnic. Instead of swallowing nauseous medicine and still more nauseous food, or having your inside decarbonised under chloroform, you merely assume a cheery expression, and remark repeatedly and fervently, "I'm getting better, I'm getting better!" And before you know it, you've *got* better. The next time I put myself round rather too much beer, and suffer from the proverbial parrot-cage mouth, I must try this recipe. But really the worthy Frenchman's ideas sounded quite plausible, and were much enhanced by demonstrations from sundry patients, who once had but one leg, and had recently grown a new one under the doctor's treatment; or had lived in bath chairs and on spinal couches for years, and were now in the front row of the chorus at one of C. B. Cochran's shows. So, being an impressionable sort of bloke, I blush to confess that I tried the dope on my Squirrel. I took it to Brooklands, and did a lap or two without Ebble-white developing that intent expression with which anything over 90 adorns his face. So I began to *coué*. I felt as confident as I could, and ejaculated as fervently as the wind pressure would let me, "She's revving faster, she's revving faster!" My speedometer took no notice, recorded no acceleration. After a lap or two my enthusiasm subsided.



A HIGHWAY ACROSS THE MEXICAN PLAINS. This view taken near La Laguna Salada (the Salt Lake) in the state of Baja, Lower California, shows a portion of the National Highway now under construction. This road extends from Mejicali to Ensenada, a distance of 180 miles, and its completion will make an easy motor course over what was formerly an almost impassable desert stretch.

# Through Feminine Goggles

## Some Notes on the Choice of a Motor Cycle.

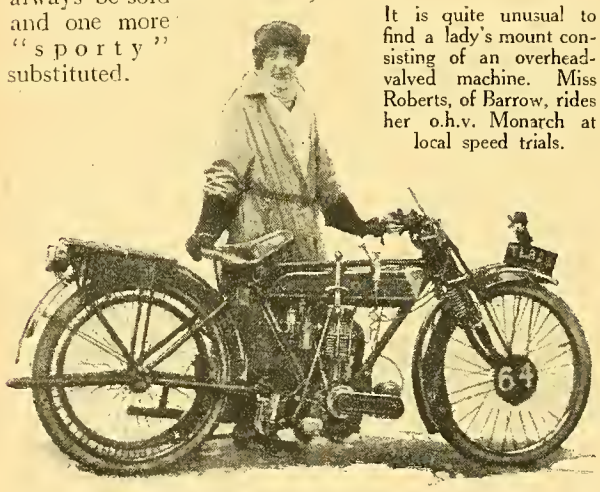
By MAB. LOCKWOOD-TATHAM.

SPRING produces all sorts of things, such as chickens, love, spots, the I-want-a-new-hat fever. It is reputed to play the dickens with a young man's fancy, but I think the most normal thing it does is to make everybody long to get out into the country and get lots of fresh air. I venture to think that this year particularly many girls, including some who probably have never ridden before, will buy a motor-bike as a good means to that end. Therefore a chat on the subject of choosing a suitable machine may be useful.

In the first place, and before any definite steps are taken, a prospective lady motor cyclist should think it over carefully, decide for what she is going to use the machine most, and consider her own capabilities, including strength, nerves and size.

It is a great mistake to try to run before one can walk, and a lot of difficulty and probably trouble of some sort will result if a lady attempts to drive a high-powered, heavy machine right away. It is much better to start with a machine which is not complicated nor too high powered, and which is amenable to drive.

When one has become thoroughly accustomed to motor cycles and their ways the original mount can always be sold and one more "sporty" substituted.



It is quite unusual to find a lady's mount consisting of an overhead-valved machine. Miss Roberts, of Barrow, rides her o.h.v. Monarch at local speed trials.

Girls are like the English weather—they vary a lot. One may be able to stand up to her big brother with the gloves; another may not be very strong. In the latter event the novice should not choose a machine that is too heavy to lift on to the stand. Remember one hasn't only to *ride* the bike. One must be able to push it about, hold it up, and prop it on to the stand without undue exertion. Conversely, if my reader's proportions are more Amazonian she will look better on, and be quite capable of handling, something a little more solid.

### The Question of "Nerves."

If her nerves are bad, in fact if she has any at all in the usual sense of the word, and she contemplates buying a motor cycle, my advice is the same as that of *Punch* to those about to commit matrimony—don't! She will be a danger to herself and everybody else, and nobody will love her. All the same, there is a possibility that one imagines oneself nervous. If any lady can ride a pedal cycle with ease and confidence, she should be quite fit to handle a motor cycle.

The next question should have a bearing on the choice of mount.

Suppose it is required just for local running about, getting into the nearest town, etc. Then one does not want such a speedy or capable mount as if she is going to make a speciality of long-distance touring or competition work.

For the purpose of pottering about, a small two-stroke answers the purpose admirably—and indeed, such strides have been made in the design of this type of machine that it shows good results on heavier work, too, sometimes. The type of country in which one lives should also be taken into consideration. If it is very hilly, the subject of gears must be considered. Practically every machine has two, three, or even four speeds nowadays.

**Through Feminine Goggles.—**

Another point which is important to a girl is the presence of a clutch and kick-starter—particularly the latter, as a clutch is not much good without it, except for restarting in traffic.

Of course, many lightweights are easy enough to paddle off under ordinary circumstances, but the best of engines are obstinate sometimes, and believe me, it's temper-wearing and back-breaking work pushing a machine along against compression—especially on a warm day.

### Two-Strokes versus Four.

The chief advantage of a two-stroke is that it is less complicated than the four-stroke and easier to understand in every way. The engine is usually more accessible, it is generally easy to start, and it is a very reasonable weight considering the power it develops. With one or two exceptions two-strokes are not made in sizes larger than 2¾ h.p., and a good model can be bought for considerably less than a four-stroke. All these points show that it is really an ideal machine for a lady, especially if she is a beginner or of a non-technical turn of mind, and does not want to indulge in very high or sustained speeds.

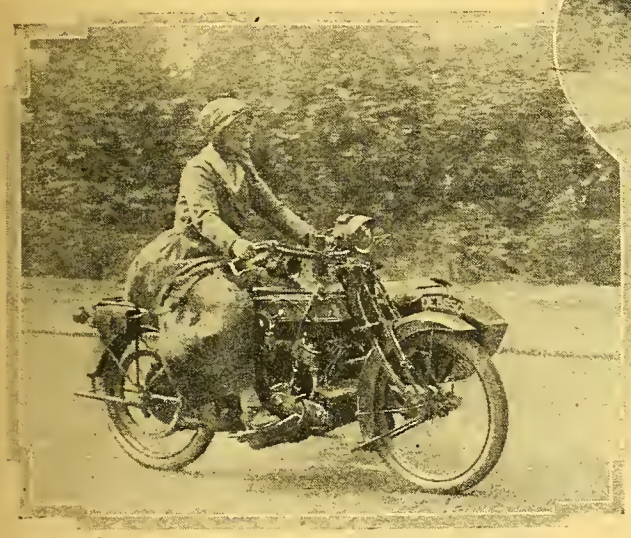
The four-stroke is usually of more substantial design and wider capabilities. There is less chance of overheating while keeping up a high average speed, and it is generally considered a more racy and professional mount than its young contemporary.

Still, it has the disadvantages, from the feminine viewpoint, of being rather heavier and slightly more complicated.

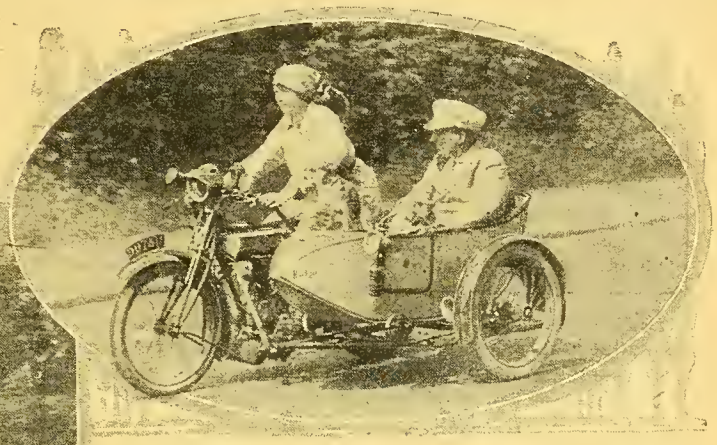
### Open or Closed Frame.

This point always crops up during the choice of a machine, and the reason for it is the question of wearing apparel. As Mrs. Grundy no longer frowns upon us for wearing breeches, this is now entirely a question of personal inclination. An open frame is really better if skirts are to be worn always, but it is possible to wear them on a low, diamond-frame machine.

The great disadvantage of the open frame is the difficulty of most manufacturers—that of producing sufficient rigidity to eliminate "whip" at speed. So that it is really better to buy the more general design, and if necessary compromise the dress question by wearing divided skirts.



A lady driver who appears quite at home on her powerful New Imperial outfit.



A change over. It is quite common in these days for the passenger to take her turn at driving.

### Second-hand Machines.

A word of advice from one who has bought the experience. In buying a second-hand machine, the lady should *take an expert with her*, and have it thoroughly tested on the road. There are thousands of second-hand machines on the market just now, and while some are good—others are like the curate's egg.

---

## ELECTRICAL *v.* HAND-TIMING.

REGARDING the recent short distance records at Brooklands, Mr. J. L. Norton, the designer of the machine which bears his name, writes :—"I am strongly of opinion that for short distance high-speed records electric timing is absolutely essential to accuracy, and I would suggest to the A.C.U. that for distances up to one mile. at any rate, electrical timing only should be recognised. My very esteemed friends, Messrs. Ebblewhite and Renolds (whose unequalled work and experience everyone recognises and appreciates) will not, I am sure, take exception to my suggestion, for no one can better realise than their good selves the impossibility of accurately measuring time by hand to the one-hundredth of a second, and speeds are now such as to make minute divisions essential."

As noted in *The Motor Cycle's* description, electrical timing was used in both the recent successful record attempts over short distances in the 500 c.c. class. Furthermore, the apparatus installed at the Weybridge track is of great accuracy.

# Road Tests of New Models

## The 4½ h.p. Chain-Driven Quadrant Sidecar.

*SPECIFICATION.*

| | | |
|---|---|---|
| *ENGINE: 4½ h.p. Quadrant; single cylinder. 85 × 110 mm. (624 c.c.).* | *CARBURETTER: Amac, two-lever.* | *DRIVE: All chain, cush hub.* |
| *VALVES: Side and rear.* | *MAGNETO: Gear-driven.* | *TYRES: 26in. × 2½in.* |
| | *GEAR: Sturmey-Archer, 3-speed.* | *SIDECAR: Coach-built.* |
| | | *PRICE WITH SIDECAR: £105.* |

IN spite of the very moderate figure at which the Quadrant is sold, the impressions obtained from an examination of the machine and from the feel of the engine on the road are not those which one is apt to associate with a cheap production. The engine is quiet and powerful in action, and a close inspection reveals no skimping of workmanship or fittings. A few may take exception to the retention of the horseshoe type front brake, but we purposely tested this fitting and found it quite serviceable.

A very considerable improvement has been made in the silencing of the engine, and the exhaust is now muffled by a duplex aluminium silencer until the noises peculiar to most four-stroke engines are the most audible sounds. The tappet noise, however, is not excessive, and the machine which we handled, even after over 4,000 miles road work, was quieter than the majority of motor cycles.

A glance round the machine before starting out on the road revealed the very sturdy and straightforward construction of both motor cycle and sidecar chassis, while the rounded saddle tank is distinctly attractive and the sidecar roomy and well finished.

No difficulty was experienced in starting the engine in spite of the intensely cold wind in which the machine had been standing for a considerable period before we took it over. A very good and natural riding position is provided, and the outfit steered perfectly at all speeds. For the first few miles we contented ourselves with normal touring speeds, though the machine handled so easily that there was no feeling of strangeness except for the fact that the powerful foot brake has its operating pedal on the not very usual right-hand side. Stoneleigh Hill, near Coventry, was the first test with which the machine was faced, and at the first attempt the engine, which was pulling stoutly on

Climbing Stoneleigh Hill, between Coventry and Leamington, on top gear with a 4½ h.p. Quadrant sidecar.

**Road Tests of New Models.—**

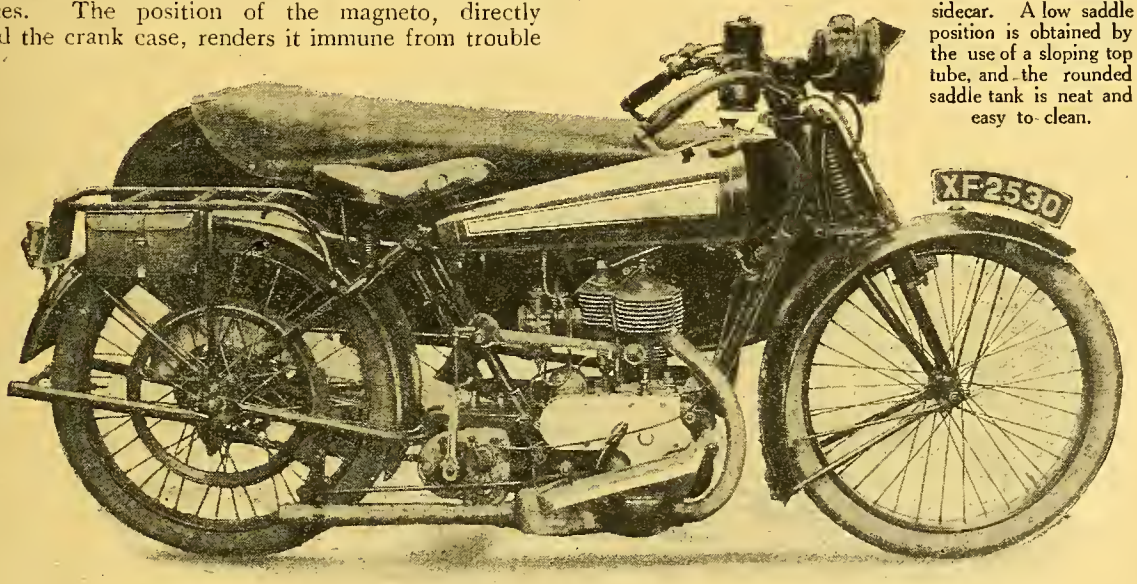
a top gear of 5-1, gave a momentary flutter which caused a drop to middle. This flutter was subsequently found to be due to a stoppage in the petrol pipe, and after removing a lump of fluff from below the carburetter the machine ran perceptibly better. A second attempt at Stoneleigh for photographic purposes resulted in a clean top-gear climb of the 1 in 9 gradient with a fairly heavy passenger in the sidecar. The hill is not a steep one, but as no "rush" is obtainable a top-gear climb with sidecar passenger may be considered as no mean performance. After a second short stop for photographic purposes we changed over to the sidecar seat, and as circumstances demanded haste, the next few miles were covered at a smart pace. Two points became immediately obvious: the sidecar was comfortable and very well sprung, the back being set at just the right angle for comfort, and the Quadrant engine proved itself capable of a very fair turn of speed with good staying qualities. Though no speedometer was fitted and no milestones were available, we should estimate the maximum speed of the outfit at somewhere in the neighbourhood of 45 m.p.h., and it is certainly capable of maintaining a high average for some miles without showing signs of distress. Some time was spent in driving the machine through water splashes at varying speeds and in climbing steep banks with grassy surfaces. The position of the magneto, directly behind the crank case, renders it immune from trouble in any reasonable depth of water, and we found the climbing powers of the machine ample for any hill on which a grip for the tyres can be obtained.

Recent modifications to Quadrant motor cycles include a new silencer giving greater ground clearance and very neat cast aluminium chain guards.

As regards equipment, the mudguards are of truly sensible width, the forks are neat and efficient in action, the lever of the Sturmey-Archer gear comes in just the right position, and the aluminium footboards are comfortable, but might be slightly longer.

It will be remembered that the valve position on the Quadrant engine is somewhat unusual, for though the exhaust port is normally placed at the side of the cylinder, the inlet port lies directly behind the cylinder, the valve being operated by a separate gear and shaft. Behind this again lies the magneto in a position which is well protected from mud and water, though the contact breaker is not too accessible.

The more we examined the latest 4½ h.p. Quadrant outfit and the more we rode it, the more obvious became the fact that it is very wonderful money value, and there is no need for anyone to fear that in purchasing such a mount they would be buying something nasty because it is cheap. All essentials are included in the price of £105, and no part is skimped in order to build down to a price.



The 4½ h.p. Quadrant sidecar. A low saddle position is obtained by the use of a sloping top tube, and the rounded saddle tank is neat and easy to clean.

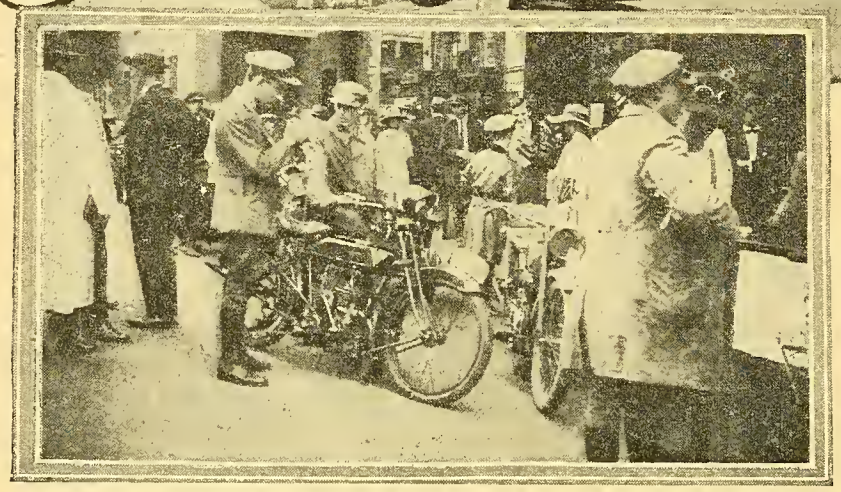
## WANTED: AN ANTI-DAZZLE REFLECTOR.

POLICE traffic signals at the busy traffic junctions of the provincial cities often lead to confusion. Obviously, the officer on duty cannot face four directions at the same time, but when a rider is approaching him from the rear misunderstanding arises due to the motorist being unable to perceive whether "the man in blue" intends him to proceed or stop. Viewed from the rear, the raising of a policeman's arm very frequently appears like the circular wave of the hand to go forward, when actually the motor cyclist was intended to "free engine."

More than once has the writer found himself in error from this cause, and it would seem to him at busy street intersections the use of mirrors would be helpful to both the police and to motor users. As a matter of fact, mirrors were used in Liverpool in the early part of last year, but were removed after a short trial, owing to the sun's reflected rays causing dazzle.

# An Australian Six Days Trial

In the centre is seen F. Roberts (4 Indian), who suggested the trial and backed it up by providing the whole of the prize money.



A scene at the start of the New South Wales M.C.C. Six Days' Trial.

## First Annual "Six Days" of the M.C.C. of New South Wales. Bad Weather Produces Pioneer Conditions. British Machine Driven by Private Owner Makes Best Solo Performance.

ALTHOUGH the first of its kind to be attempted in Australia, the N.S.W. "Six Days" proved to be a great success. Of 38 entries received 24 faced the starter. It was very unfortunate that wet weather was experienced during the trial, as the rain was responsible for the failure of some of the competitors. On the whole, however, the trial proved the reliability of the motor cycle, and it should also create a greater interest in the sport.

The success of Harry Hulford on the 3½ h.p. Douglas shows that the medium-weight has the reliability to go anywhere, the same as the high-powered machines, a fact not always realised by those with no experience of British motor cycle history.

### The Start of the Trial.

At the start it was very dull and threatening. The first day's run was to Bathurst, 129 miles, with the luncheon stop at Lithgow, 89 miles.

The first rider away was H. Cuncliffe (2¼ James), followed 20 minutes later by the "under 600 c.c." contingent. The sidecars followed next, and the procession was completed by the solo machines over 600 c.c.

The roads to Penrith were abominable to say the least. Bolton (4¼ B.S.A.) fell on the Mount Victoria Pass, but was luckily unhurt. A little further on Hodgson also came off. Patching (7-9 Indian), after crossing the deep creek before Lithgow, got water into his magneto, and was compelled to retire. E. Norman (7-9 Harley-Davidson) was troubled by oily plugs. P. Harrison (7-9 Indian) had a bad fall, but all except Patching checked in on time at Lithgow. Cuncliffe had had trouble with his lubricating oil and was compelled to change it at Lithgow.

Rain now commenced to fall, and it teemed all the way to Bathurst. Cuncliffe (James) punctured, but soon had matters right. On arrival at Bathurst it was found that Hallinan (2¾ Douglas) had struck a series of punctures, which cost him 76 points. Cross (Harley-Davidson sc.) and Head (Harley-Davidson solo) both retired before Bathurst.

### Incessant Rainfall.

Throughout the night the rain continued in a deluge, and it was ascertained that the road from Wellington to Parkes was impassable. The officials were in a quandary, and on it being submitted to the competitors it was decided to omit that section, and set out at 9 a.m. for Parkes, omitting Wellington.

Whilst the riders were having breakfast, word was received to the effect that the road had collapsed four miles out, leaving a hole 10ft. wide and 12ft. deep. After a consultation it was decided to ride there in a bunch, all to lend a hand in getting the machines across. After some difficulty the machines and the official car got safely over, only to meet, five miles further on, a creek swollen by the heavy rain; with difficulty all crossed safely, and rode through to Orange.

After lunch at Orange, Tretheway (7-9 Indian sc.) had three punctures, which cost him 44 points. Four miles out of Molong, Bolton (4¼ B.S.A.) ran out of oil. A mile or so further on he fell heavily, and was rendered unconscious. Cuncliffe, on the James, lost the top of his carburetter, and ran out of petrol. He had to walk two miles for a supply, making a new top for his carburetter out of a puncture repair outfit tin.

### Third Day—Parkes to Young.

Twenty competitors set out from Parkes. The road conditions were only fair, and many of the competitors got lost. Buckley (7 Harley-Davidson) was unfortunate, covering 84 miles instead of 42, and losing 37 points. Cuncliffe (2¼ James) also got lost. Hulford (3½ Douglas) punctured. J. Miles (7-9 Harley-Davidson sc.), had a sooted plug, and J. Saunders (7-9 Harley-Davidson sc.), had water in his magneto.

### Fourth Day—Young to Cootamundra.

The start was made in fine weather, all getting away except Stuart, who remained to repair a punctured sidecar wheel. Six miles out the Douglas riders, E. Williams, M. Hallinan, and H. Hulford (known as "Faith, Hope, and Charity"), were passed, one having a puncture and the other two helping. Naught (Indian sc.) also suffered from tyre trouble. The last portion of the run was an almost straight 50 miles, but a most enjoyable run was spoilt by grasshoppers, which were present in millions. Everyone arrived at Temora except Stuart, who through punctures lost 51 points.

On the next stretch to Junee, White (7-9 Harley-Davidson), had a bad spill. All the way to Cootamundra the "roads" were merely rough waterlogged tracks.

### Fifth Day—Cootamundra to Goulburn.

This stage will never be forgotten by those who took part. Before starting, Norman took out his Harley back wheel and sidecar wheel to repair punctures. Hallinan's Douglas refused to fire for some considerable time. The road to Harden was only fair, but all checked in except Naught, although Norman only just arrived on time.

At 2.10 p.m. the competitors left Yass for Goulburn in pouring rain. The lightning was very vivid, and struck a tree which fell across the road. Those who left Yass early arrived at Goulburn, but the late starters left their machines on the roadway, and walked to Gunning, five miles away, where they stayed the night.

### Sixth Day—Goulburn to Sydney.

Fourteen riders faced the starter for the last day of the trial, and none looked very happy, as it was still raining, and the speeds set were high. Hulford could not start his Douglas, and was delayed ten minutes. Three who stayed the night at Gunning started with the others from Goulburn. White (7-9 Harley-Davidson), who had not lost a single point, stopped with a broken valve, and Hodgson, who stopped to assist, failed to get his machine going again, and had to be towed to Moss Vale. Another huge tree was found across the road, having been struck by lightning.

Three miles from Picton, Kerslake (4 Indian) opened up on a perfect metalled road, but striking a greasy patch, skidded into a culvert and smashed his machine. Up till this accident he had not lost a mark. Roberts (4 Indian) stopped to place some bearings in his front wheel, and arrived at Camden control three minutes early, thus losing two marks, his only loss in the trial. Hulford (3½ Douglas) was now the only solo rider with a clean sheet.

### At the Finish.

Everyone who timed in at Taverner's Hill was allowed 15 minutes to reach the final control at the Club rooms, in order to go slow through the city traffic.

On arrival at the rooms each machine was checked in, and the riders retired for refreshments. One prominent rider was heard to say that the mud-caked machines were a bad advertisement, and should not be permitted.

Undoubtedly it proved how inefficient the mudguards were. Also noticeable was the fact that four machines of one make had all broken front forks in the one place.

The results were :—

SOLO CLASS.

| | Marks lost |
|---|---|
| H. Hulford (3½ Douglas) ... ... | nil |
| F. Roberts (4 Indian) ... ... ... | 2 |
| E. White (7-9 Harley-Davidson) ... | 94 |
| E. Williams (3½ Douglas) } ... ... | 100 |
| L. Palmer (7-9 Indian) } | |
| H. Hodgson (7-9 Harley-Davidson) .. | 110 |

SIDECAR CLASS.

| | Marks lost. |
|---|---|
| P. Williams (7-9 Excelsior sc.) } | |
| J. Miles (7-9 Harley-Davidson sc.) } | Dead heat nil |
| A. Dennis (7-9 Indian sc.) } | |
| E. Norman (7-9 Harley-Davidson sc.) ... | 34 |
| E. Buckley (7-9 Harley-Davidson sc.) ... | 36 |
| J. Thretheway (7-9 Indian sc.) ... ... | 43 |
| S. Stuart (7-9 Harley-Davidson sc.) ... | 63 |
| J. Saunders (7-9 Harley-Davidson sc.) .. | 100 |
| M. Grayson (7-9 Harley-Davidson sc.) ... | 152 |

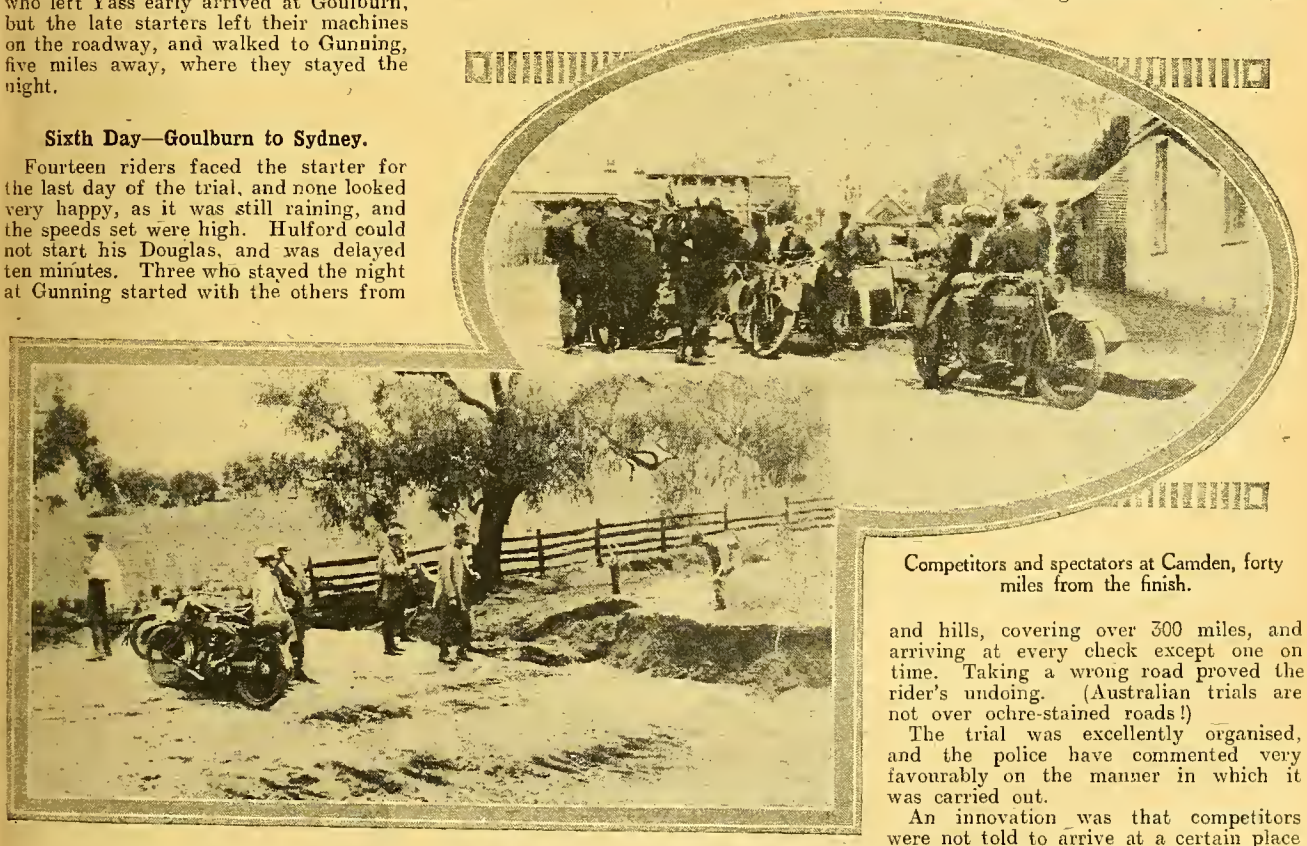
RETIRED AND CAUSES.

P. Harrison (7-9 Indian)—broken forks, and progress stopped through rain.
P. Kerslake (4 Indian)—machine smashed through fall.
A. Patching (7-9 Indian sc.)—water in magneto and capsize.
R. Cuncliffe (2¼ James)—took wrong road.
M. Hallinan (3½ Douglas)—punctures and heavy rain.
M. Cross (7-9 Harley-Davidson sc.)—did not complete first day, no fault of machine.
H. Head (7-9 Harley-Davidson)—did not complete first day, no fault of machine.
W. Bolton (4¼ B.S.A.)—machine damaged owing to fall.
R. Naught (7-9 Indian sc.)—rain and punctures.

Undoubtedly the best performance in the trial was that of H. Hulford. He rode a 3½ h.p. Douglas solo, and had no occasion to touch his machine except for a few punctures. Almost as good was the 2¼ h.p. James ridden by Cuncliffe. This machine negotiated the worst roads and hills, covering over 300 miles, and arriving at every check except one on time. Taking a wrong road proved the rider's undoing. (Australian trials are not over ochre-stained roads!)

The trial was excellently organised, and the police have commented very favourably on the manner in which it was carried out.

An innovation was that competitors were not told to arrive at a certain place at a certain time. They were given a set time to do the distance and had to work out their own time of arrival.



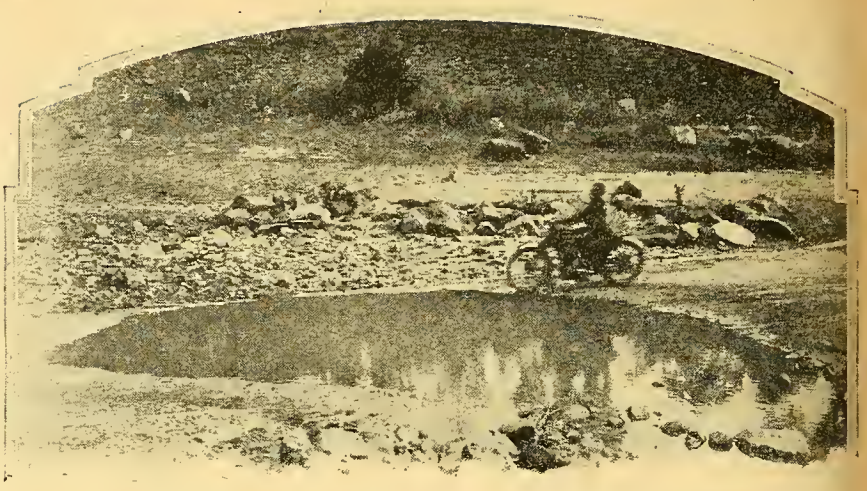
Competitors and spectators at Camden, forty miles from the finish.

A scene en route. Owing to heavy rains part of the road had been washed away and had to be repaired by competitors themselves.

**An Australian Six Days' Trial.—**

The four riders who got through without loss of points were two trade and two private competitors. The latter rode a Douglas and a Harley sidecar, and the manner in which they got through speaks volumes for those machines, as the course was an everyday one over main roads.

Mr. J. A. Fair, secretary to the M.C.C. of N.S.W., states: "When we organised the trial and issued the conditions we promised on the official programme, 'The course selected is over beautiful roads, the conditions are suitable to all, and, if you propose a social trip at Christmas, what better can you do than enter?' I am sorry to say it was the reverse, owing to the heavy rains over the whole course. The roads were in a frightful state, the riders were rain-soaked throughout, and the machines had a gruelling test beyond doubt. I have followed every reliability trial held in this State, and many inter-State, but this was the daddy of the lot. The riders who finished deserve great credit, and also their machines. Many lost points through sheer bad luck, such as falls and punctures; but it is all in the game, and none grumbled."



H. Hodgson (7-9 Harley-Davidson), a rider who holds road records between Sydney and Melbourne, at one of the several water splashes on the route.

Such was Australia's first "Six Days." Everyone is looking forward to the next, which, it is confidently anticipated, will be a great event.

## EAST MIDLAND CENTRE TRIAL RESULTS.

ONLY a small proportion of the starters retained clean sheets in the open trial of the East Midland Centre A.C.U., held by the Leicester M.C. in Derbyshire on March 25th, and described in *The Motor Cycle* of the Thursday following. This, of course, was only to be expected from the nature of the trial; and that a three-wheeler would gain the premier award was also almost a foregone conclusion—no solo machine could overcome the handicap of being a single track vehicle on "roads" utterly unsuited for solo motor cycles.

Apart from this criticism, we think the results make interesting reading; those who have gained 100% awards have every reason to be proud of their performance, this applying only fractionally less so to the silver medallists.

The official results follow :—

**OPEN AWARDS.**

**The Raleigh Cup** (value 100 guineas; to be held for one year with gold medal; for the best individual performance).—**H. F. S. Morgan (Morgan Runabout).**

**The London Motors Trophy** (To be held for one year with gold medal, for the best sidecar performance).—**B. L. Bird (6-7 B.S.A. sc.).**

**The Chapman Trophy** (To be held for one year with gold medal; for the best performance by a solo machine). **B. Kershaw (2½ New Imperial).**

**The Winn Trophy** (To be held for one year with gold medal; for the best performance 3-wheeled runabout or cycle-car—winner of premier award not eligible). **N. Norris (Morgan Runabout).**

**The Bowerman Trophy** (To be held for one year with gold medal; for the best performance by a solo two-stroke up to 350 c.c.). **L. Bees (3 Beardmore-Precision).**

**The Waddington Cup** (To be held for one year with £4 4s. gold medal (by the North Derbyshire Motor Club); for the best performance by an amateur).—**F. J. Ellis (Matchless sc.).**

**Team Prize. Sunbeam Team.**—G. Dance, Reg. Brown, and A. Bennett.

Gold Medals (Best Class performances, other than trophy recipients).

Solo: 250 c.c., A. Bowerman (2¼ Velocette); 350 c.c., H. Gibson (2¾ Raleigh); 560 c.c., A. Bennett (3½ Sunbeam); unlimited, G. Brough (S Brough Superior).

Sidecar: 250 c.c., no award; 350 c.c., T. H. Weaver (2¾ Sirrah sc.); 560 c.c., G. M. Townsend (4½ P. & M. sc.); unlimited, I. Cohen (10 Campion sc.).

Additional Gold Medals, carrying first class awards: H. Harris (2¾ A.J.S.); W. Hadfield (2¾ Raleigh); G. Dance (3½ Sunbeam); H. J. Stretton-Ward (3½ Triumph); S. Wright (4½ Humber sc.); F. O'Brien (Matchless sc.).

Silver Medals, carrying 2nd class awards: F. Hatton (3½ o.h.v. Douglas); J. Simpson (3½ Scott); J. A. Watson Bourne (2¾ Coventry Eagle); E. A. Barnett (2¾ Francis-Barnett); G. W. Hartwell (8 Brough Superior); F. W. Giles (7 A.J.S. sc.); J. W. Hazelwood (5-6 Hazelwood sc.); W. L. Danskin (7-9 Rudge sc.); B. Bourke (4½ New Hudson sc.); J. H. Walker (6 B.S.A. sc.); F. H. Brown (4 Rex Acme sc.); Reg Brown (3½ Sunbeam sc.); W. Ridley (New Hudson Light Car); H. P. Denley (Rhode Car).

## RESULTS OF "ARCTIC" TRIAL.

SPECIAL silver medals, to rank as first-class awards, will be given to all the solo competitors in the Western Centre A.C.U. Open Trial who checked in at Clevedon and all the drivers of passenger vehicles who reached Tetbury or Clevedon. As announced in our description last week, the event was abandoned at half distance, owing to the unprecedented weather conditions.

The official list of medallists follows :—

SOLO MOTOR CYCLES. (Officially deemed to have checked in at Clevedon.)

J. A. Newman (3½ Douglas); V. C. Anstice (3½ Douglas); A. J. Colcombe (4 Indian); J. Whalley (2¾ Massey-Arran); B. Kershaw (2½ New Imperial); P. L. Mayo (2½ Coventry-Eagle); J. N. Roberts (2½ New Imperial); E. W. Spencer (3½ Douglas); W. J. L. Paynter (3½ Norton); A. Bennett (3½ Sunbeam); G. Dance (3½ Sunbeam); W. B. Gibb (3½ Douglas); W. Brandish (4½ Humber); R. Grindlay (4½ Humber); F. G. Ball (2¾ Douglas); P. B. Phillips (2¾ Douglas); C. G. Pullin (2¾ Douglas); S. M. Greening (2¾ Coventry-Eagle); D. A. Atkin (2¾ Francis-Barnett); A. White (2¾ Francis-Barnett); E. A. Barnett (2¾ Francis-Barnett); K. J. Davis (3½ Sunbeam); A. E. Rollason (3½ Ariel); W. T. Woodcock (3½ Ariel); L. Newey (6 Ariel); G. H. Tucker (4 Norton); W. H. Drew (3½ Norton); F. C. Parkes (2½ Sun-Vitesse); M. Bishop (2½ Sun-Vitesse); F. J. Johnson (2½ Sun-Vitesse); S. Gill (2½ Sun-Vitesse (award subject to confirmation); G. Butcher (3½ Sunbeam); A. W. Thrush (3½ Sunbeam); F. J. Adam (3½ Norton); E. R. Main (3½ Zenith-Bradshaw); C. W. Ramstedt (2¾ Cotton); W. Brooke (2¾ Cotton); F. G. Morgan (2¾ Cotton); F. Ferriday (2¾ Omega); H. Greaves (3 Beardmore); H. V. Collins (3½ Norton); W. T. Bicknell (2½ Enfield); A. E. Paley (3½ Sunbeam); F. W. Hughes (2¾ Rex-Acme); N. W. Smith (4 Triumph); H. J. Stretton-Ward (3½ Triumph); W. Moore (3¾ Scott); R. Sadler (3 Ivy); H. Gibson (2¾ Raleigh); H. J. Greathead (3 Ivy); W. H. Hadfield (2¾ Raleigh); C. F. Nott (2¾ Raleigh); H. W. Parkes (2½ Sun-Vitesse); A. R. Edwards (2½ Levis); E. J. Henson (2½ Alldays-Allon); E. F. Cope (5-6 Raleigh); R. C. Cooper (2½ Alldays-Allon); R. W. Duke (3½ Triumph); C. W. J. Busby (2¾ New Imperial); R. C. Bennett (2½ Federation).

PASSENGER VEHICLES. (Officially deemed to have checked in at Tetbury.)

N. Hall (2¾ O.K. Junior sc.); V. H. Smith (3½ Norton sc.).

PASSENGER VEHICLES. (Officially deemed to have checked in at Clevedon.)

J. T. Bashall (6 Martinsyde sc.); W. H. Bashall (6 Martinsyde sc.); E. H. Gifford (6 Martinsyde sc.); L. R. Blick (7 Harley-Davidson sc.); B. L. Bird (6 B.S.A. sc.); J. H. Walker (6 B.S.A. sc.); H. S. Perrey (6 B.S.A. sc.); P. Pehrson (4 Dunelt sc.); B. Bladder (8 New Imperial sc.); T. H. Weaver (2¾ Sirrah sc.); F. T. Sibley (3½ Rudge sc.); W. L. Danskin (7-9 Rudge sc.); L. E. Clulee (2½ Alldays-Allon sc.); H. G. Uzzell (8 New Imperial sc.); A. G. Cocks (4½ Beardmore sc.); F. W. Giles (7 A.J.S. sc.); F. W. Becker (5-7 Coventry-Victor sc.); H. O. Walters (8 Ariel sc.); A. Watson (4½ Sunbeam sc.); W. F. Scott (3¾ Scott sc.); G. H. Goodall (8 Morgan cyclecar); J. W. Meredith (8 T.B. cyclecar); W. A. Carr (8 Morgan cyclecar).

# REGULATING ROAD TRAFFIC.

## Suggested Abolition of Speed Limit. Illuminated Number Plates and Rear Lamps on Motor Cycles. Recommended Signals for Drivers.

A PERUSAL of the report of the Departmental Committee on Taxation and Regulation of Road Vehicles brings good news to all motorists, as it embodies really sensible proposals, based upon experience, regarding motor car law.

The report deals with every form of road vehicle, and contains not a few references to motor cycles, the first of these being with respect to trade numbers, which are issued at a fee of £1 10s.

**No Speed Limit.**—The most startling recommendation in the whole report is that the speed limit should be abolished, the actual opinion of the Committee reading as follows: "Upon the whole we have come to the conclusion that more effective control could be exercised in a less unpopular manner by amending Sec. I. so as to make it applicable to all cases of negligence or reckless driving, or driving to the common danger, it being made explicitly clear that speed is an element of danger. This involves the repeal of the 20 miles an hour speed limit." It is now suggested that Sec. I. of the Motor Car Act should read as follows:—"If any person drives a vehicle on a public highway recklessly or negligently, or at a speed or in a manner which is dangerous, having regard to all the circumstances of the case, he shall be guilty of an offence under this Act," thus removing the objectionable clause "having regard to the traffic which may reasonably be expected to be on the highway."

**Ten Mile Limits Discountenanced.**—The abolition of 10 miles an hour speed limits is also suggested, while in their stead cautionary signs with notices to the effect that speed should not exceed so many miles an hour might be erected. It is also suggested that the mere exceeding of the suggested limit is not necessarily an offence. The Committee goes on to say that unauthorised signs should not be allowed.

**Heavy Penalties for Dangerous Driving.**—Having abolished the speed limit in its suggestions, the Committee expresses its opinion that driving to the public danger should be treated as a most serious offence, the offender for the first time being liable to a fine not exceeding £50 and the possible suspension or withdrawal of his licence, while on the occasion of the second or subsequent offences suspension or withdrawal should be compulsory, and the fine not exceeding £100, and/or imprisonment not exceeding six months.

In view of the suggested abolition of the speed limit the illumination of motor cycle rear number plates is expressed as being desirable and essential in the public interest. As in the case of a previous report, motor cycles are classified as "those vehicles which have less than four wheels and do not exceed 8cwt. unladen." It is also stated that the Committee is aware that there are motor cycles which do not comply with the regulations as regards weight.

**Motor Cycle Brakes.**—As before, the motor cycle must be equipped with two independent brakes, but a further suggestion is made that these brakes must be "kept in proper order and repair," and that the police be empowered to examine them if occasion require.

A curious statement is made as regards trailers. The word "trailer" indicates a wagon attached to a heavy motor car; it does not include "sidecar," but we also read that "no motor cycle be permitted to draw a trailer as distinguished from a sidecar." That means to say that a trailer carrying a camping outfit towed behind a sidecar outfit or a motor bicycle will not be allowed if the suggestions are adopted.

So far as the age limit is concerned, the Committee recommends that the Minister of Transport be empowered to raise the minimum age limit for motor cycles (14 years) if found necessary owing to altered traffic conditions, or for greater horse-power of motor cycles, or for similar reasons.

**Non-Production of Licence.**—Another abuse of the existing law which is put forward for alteration is that affecting the production of licences on demand by the police, and the report states that the failure to produce a licence on demand should not be necessarily an offence if the holder gives his correct name and address, and produces the licence to the police authorities within three days and satisfies the court that his failure to produce it was due to occasional inadvertence. Nevertheless, the licence should always be carried by the driver.

Licences should be all of a common form; that is to say, every county should issue the same form of licence, and the holder should sign his licence.

**Police Want Bigger Number Plates.**—With regard to the question of number plates, it is expressly stated that the police want motor cycle number plates to be two-thirds the size of those carried on cars, and not half the size as at present required, but the Committee does not recommend this alteration. It is further expressly stated that the illumination of front number plates was most unsatisfactory; it was recommended that rear number plates on motor cycles should be properly and clearly illuminated, and that the red rear lamp should be compulsory. Driving mirrors are also recommended.

**Drivers' Signals.**—Some important remarks are also contained in the report concerning the rules of the road and driving. These signals, the report suggests, should be as few as possible, but those mentioned are sensible, and are practically those in daily use. For example, the driver wishing to stop holds out his right arm vertically; if he turns to the right he holds his right arm out horizontally; if he is about to slow down the right arm is held out horizontally with the palm downwards, the hand being moved up and down; if he desires to turn to the left the right arm is held out horizontally and swept towards the left hand; if the driver desires a vehicle to overtake him he holds his right arm below the horizontal, and waves it from the rear to the front. It is suggested that non-observance of these driving rules is not to be constituted as an offence, but failure to make the right signal would be taken into consideration if an accident has been caused.

Under the heading "Rules of the Road; Advice to Drivers," it is suggested that any towing by, or riding on a vehicle without the consent of the driver would be regarded as an offence.

**No Case Against Pillion Riding.**—A good deal has been written concerning pillion riding, but in the opinion of the Committee this should not be forbidden, as "no case has been made out to be so strong as to justify its prohibition."

Pedal cycles have not escaped the notice of the Committee, and it is expressly stated that every cycle should have a means of audible warning of approach, and if fitted with a free wheel it must have a brake. It is also suggested that deaf cyclists should carry a signal showing the disability from which they are suffering.

There was only one dissentient among the Committee signing the report; this was Mr. Frank Elliot, C.B., Assistant Commissioner of Police, and as it is by no means impossible that his views may influence the final adoption of the report by Parliament, we reproduce those objections which affect motor cyclists:—

"I disagree with the recommendation to treat all motor vehicles with less than four wheels, and not exceeding 8cwt. in weight, as falling within the motor cycle class, and therefore entitled to carry number plates of half size. Further, I am satisfied that an ample case has been made out for increasing the size of the identification mark on motor cycles.

"As regards the legal speed of motor vehicles, I would have been ready to assent to a substantial increase of speed, but I think that the increases proposed for some of the heavier types are too generous, and I disagree altogether with the recommendation to fix no maximum speed limit for motor cars and motor cycles. In my opinion, the time is not ripe for such a drastic change; the proposal does not show due regard for the public safety; and, if carried into effect, would be attended by the most unfortunate results, however great the deterrent afforded by the penalties for dangerous driving and kindred offences.

"I cannot support the recommendation that pedal cycles with a fixed wheel need not be fitted with a brake and that those with a free wheel need have only one. I think that the former should be required to carry a brake (subject to special concessions for machines designed and used for track racing, whose use on the highway is only occasional and for short distances), and that the latter should have two."

98 Sidecar Outfits
9 Cycle Cars.
93 Cars.

THE ROUTE AT A GLANCE.

THE first London-Land's End Trial took place for the cup presented by the late president of the Motor Cycling Club, Lt.-Col. Charles Jarrott, in 1908.

The course was from London to Land's End and back *via* Salisbury and Exeter, only six hours' rest being allowed at Penzance. In the following year the same course was utilised.

In the first two years the trial was held in August, but in 1910 the time was changed to Easter. Thirty-five started and twenty finished the same course. A more difficult route was chosen in 1911; sixty-nine started and twenty-seven finished. In 1912 the course was made still more difficult; eighty competitors started and forty-four finished. Lyme Regis and Trow hills were first included in 1913, and, despite very bad weather, fifty finished out of the ninety-five riders who started.

Better weather prevailed in 1914, and the same course was used. One hundred and sixty-nine men started, and one hundred and eight finished. It was not until 1920 that the trial was resumed. Further stiffening of the course took place by the inclusion of Porlock and Lynton hills, and the journey was made a single one, finishing at Land's End. Cups were offered for sidecars, three-wheeled cycle cars and light cars. Last year the run was made severe by insisting that the competitors should take Porlock on the run and cover the most difficult section of the route at a speed of 19.4 m.p.h. Seventy-two solo riders started and sixty finished. Sixty drivers of sidecars started and forty-four finished.

This year the course has been made even more difficult by the inclusion of Beggar's Roost (Barbrook Mill) one of the most trying climbs in the country.

Previous winners of the Jarrott Cup were :—

1908. S. G. Frost (4½ Minerva).
1909. F. G. Smith (3½ Triumph).
1910. Rear-Admiral Sir R. K. Arbuthnot, Bt., K.C.B. (3½ Triumph).
1911. A. J. Moorhouse (7 Indian).
1912. H. Karslake (3½ Rover).
1913. P. W. Moffat (2¾ Douglas).
1914. E. A. Colliver (7-9 Indian).
1920. T. S. Sharratt (4 Triumph).
1921. F. A. Longman (3½ Ariel).

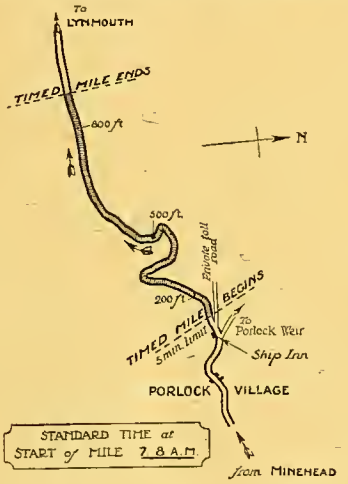
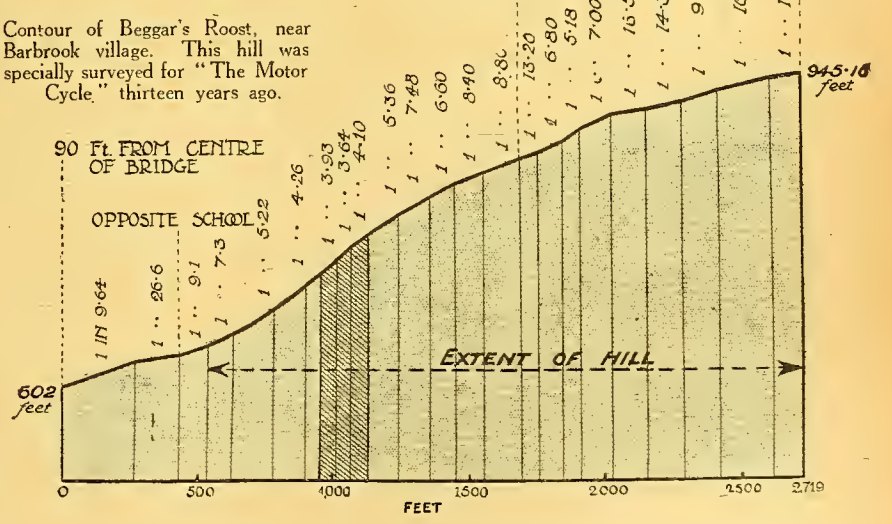
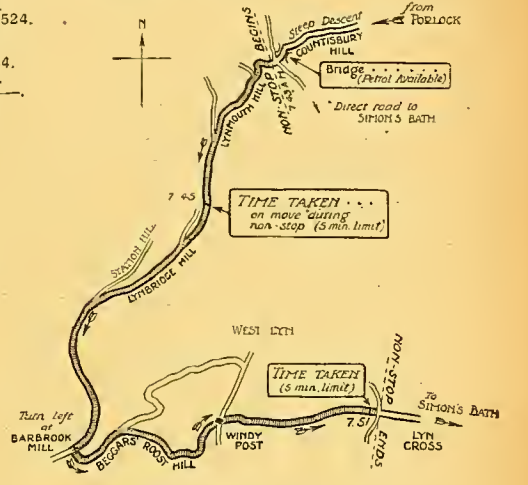
A list of the 93 car entries appears in *The Autocar*.



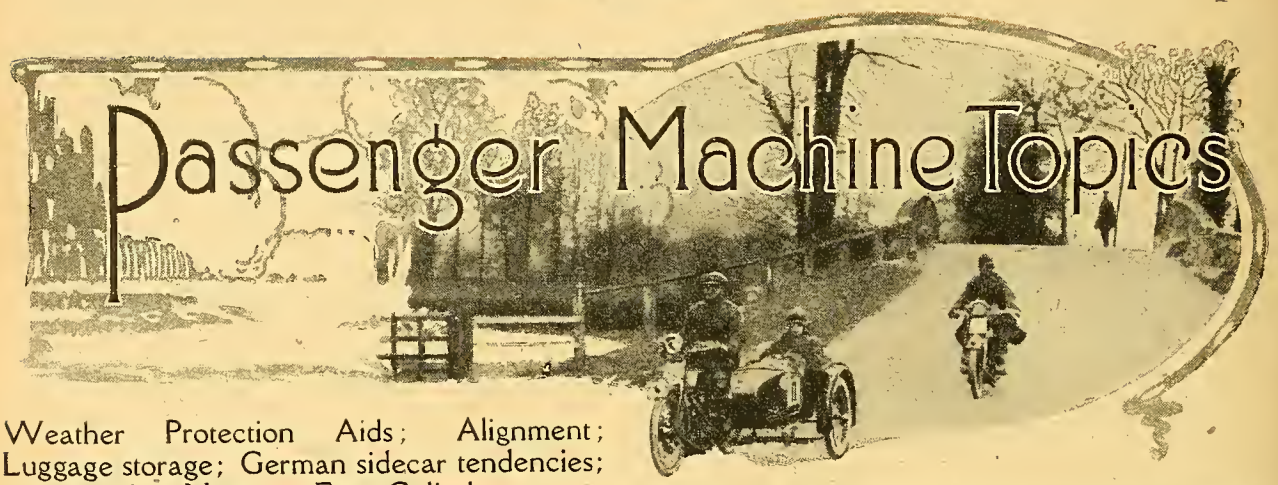
The shaded portion shows the timed mile, commencing a little way beyond Porlock village.



Contour of Beggar's Roost, near Barbrook village. This hill was specially surveyed for "The Motor Cycle" thirteen years ago.



From the foot of Lynton Hill to some little distance beyond the summit of Beggar's Roost is a non-stop section, details of which are shown.



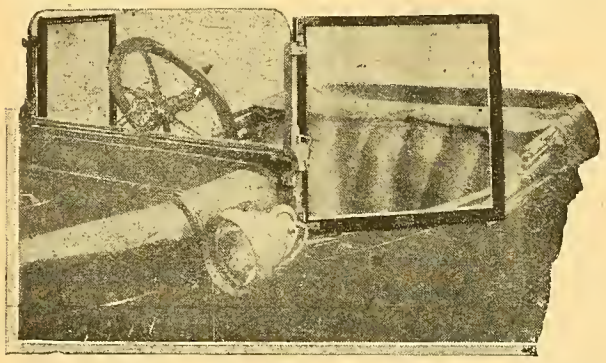
# Passenger Machine Topics

## Weather Protection Aids; Alignment; Luggage storage; German sidecar tendencies; and a Note on Four-Cylinders.

By "FRIAR JOHN."

TO what endless uses have the many ex-Government surplus stocks been put. Aeroplane wings have been used as pigsties and hen-runs, propellers as walking sticks, and swords as ploughshares, at any rate bayonets as pokers—so the mighty arms of war have fallen, and now the Service Co. has sent me an ex-W.D. fencing jacket in white drill that will make "an ideal under-jacket for the motor cyclist who gets about in all weathers." It converts the slimmest figure into a veritable Bibendum, and will defy an Alaskan blizzard. One can buy this garment for 4s. 9d., even though the original cost was 32s., and probably get more than 4s. 9d. worth of cotton-wool in the linings.

A COLD draught whistling round the edge of the screen, whether on a sidecar or runabout, can completely spoil the passenger's comfort—and, by the way, how is it that the driver himself so seldom complains of draughts and cold? Is it because the charm and distraction in driving blinds him to discomfort? However, if passengers did not frequently and persistently criticise, probably we should not have advanced so far as we have done in providing passenger comfort. The makers of the Orto windscreen must have heard grumbles about the flat windscreen, for they fitted sidescreens long ago on their admirable productions, and now they are placing sidescreens on the market which are specially designed for Morgans, and very effective they are too, being of good width, and, of course, adjustable, as the illustration shows.



An Orto sidescreen which will interest Morgan owners.

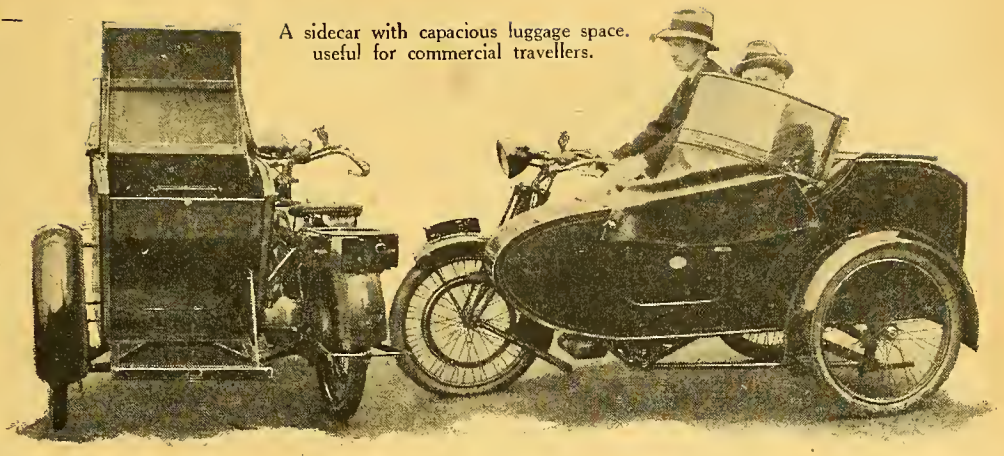
KNOCK-KNEED outfits are not so common as they used to be, although there are still too many on the road, and what a disgraceful sight they are, labelling the owner at once a slothful and unreliable individual, unless, of course, the maladjustment be a temporary accident. There is no excuse whatever for loose tube clips, and although one may say that the nuts are fastened as tightly as possible and will not hold, any mechanic will make the job hold some way, either using packing or pinning the clip. At all costs avoid appearing on the road like the rider shown in the illustration, and have a little thought for your passengers, since in some mysterious way a knock-kneed outfit makes both rider and passenger look foolish and ridiculous

Avoid appearing on the road with a sidecar and machine leaning in this ungainly manner.

**Passenger Machine Topics.—**

A COLLEAGUE facetiously remarks, on seeing the photographs of the sidecar on the right, that "it was a capital idea for camping, being of good length, for if the folding back were supported on legs, one could sleep in the body." Being well accustomed to sleeping in a yacht's bunk about the width of a matchbox, *he* might sleep dreamlessly in it, but many would not. When Mr. Easting had the sidecar made, it was not his idea to sleep in it, I feel sure; at any rate, he said nothing about that particular point. The most commendable feature of the body, which was built specially as a business vehicle, is the great provision for storage without an ugly and cumbersome appearance; there is room for a passenger as well as a great many samples.

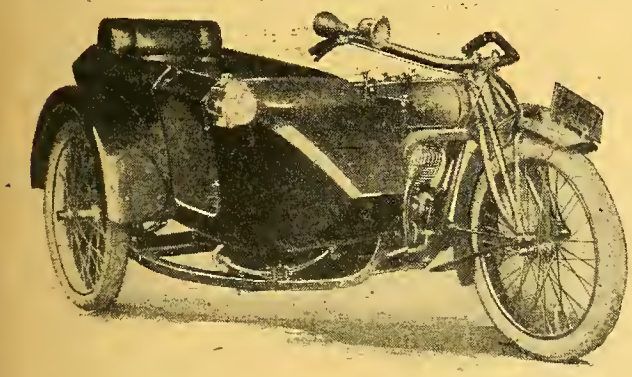
I do not know whether a private individual would be justified in carrying a body of this size about with him always on short journeys, but for frequent long tours the superb storage capacity would save the trouble of packing luggage on the carrier, besides looking infinitely neater.



A sidecar with capacious luggage space, useful for commercial travellers.

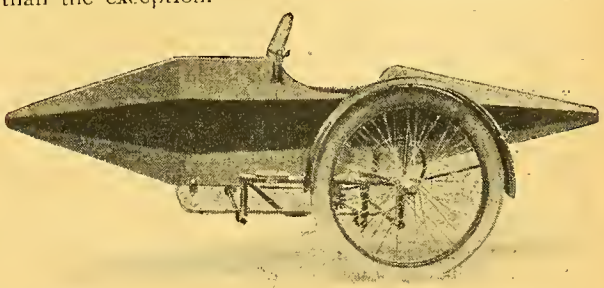
◈ ◈ ◈ ◈

JUDGING from the illustration on this page German sidecar manufacturers are not blind to the tendency of design in this country. Mr. R. Shepherd, of Eindhoven, OOievaarslaan, sends an illustration of a body of pleasing appearance, with ample mudguarding, yet not at all clumsy. Angle iron is used in the chassis construction and transverse semi-elliptic springing for the front suspension. The hood is concealed in the locker behind. At the present rate of exchange the cost of this sidecar in Germany is 11,500 marks, roughly £10 in English money, a price that need not be commented upon; it speaks for itself



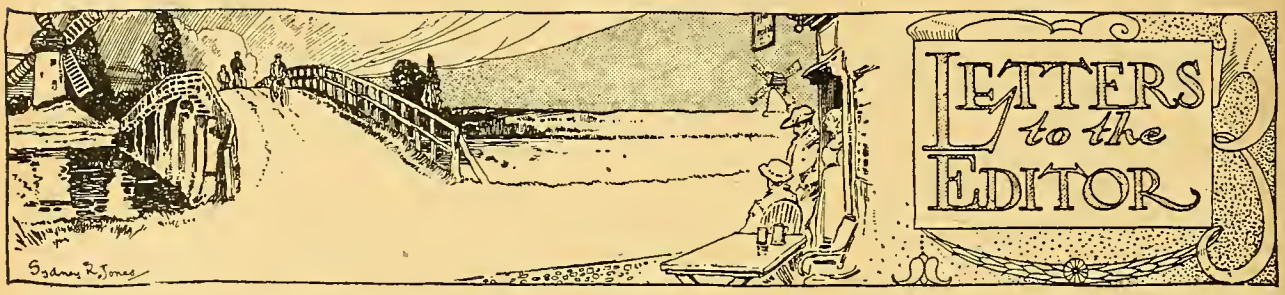
A German sidecar with concealed hood and cruiser type of body.

ONE hardly associated four-cylinders with a sporting solo mount, although we may shortly see more four-cylinder models on the road. Up to the present their weight has placed them in the category of passenger mounts, but the advent of the Low two-stroke and another design which will shortly be shown to the public may alter this state of affairs. As a purely speed mount it may never equal the super-single, but, if only on the merit of smooth running and pleasure of driving or being driven in a four-cylinder outfit, the introduction of new engines of this type is more than justified. Ten years ago more than one well-known authority on motor cycle matters predicted the four-cylinder sidecar eventually ousting the twin and the single. Although their prediction is far from fulfilment, the advent of new models marks a desirable revival of interest in the type. I have often asked passengers whether they have any preference in the matter of engines, whether the purring twin is so very much more desirable than the "thumping" single, and it must be acknowledged that the twin has the vote in the majority of cases. But then all twins don't purr, and all singles don't thump. Personally the most pleasurable sidecar ride I have ever had was in a four-cylinder outfit. Terrific acceleration combined with excellent brakes (on this particular machine) made driving in traffic and on the open road an absolute pleasure, and top-gear hill-climbing was the rule rather than the exception.



GRACEFUL AND LIGHT.

Unique streamline design is one of the features of this sporting model Hawk sidecar. There is a spacious locker behind the passenger with room for batteries, and it is sold complete with windscreen and clockboard by the Hawk Manufacturing Co., 12, Hampton Street, Brighton.



The Editor does not hold himself responsible for the opinions of his correspondents.

### *MOTOR CYCLES FOR BOYS AND GIRLS.*

Sir,—May I, as a motor cyclist of some twelve years' experience, be permitted to say that though in the many thousand miles of my wanderings I have met many youthful riders of both sexes, I have yet to encounter one who was guilty in any way of either reckless or careless driving. Most of my thrills have been caused by "speed merchants" of about twenty years of age. That, I know at any rate, was my own dangerous period!

By all means let the youngster have a motor cycle. The sport will do him, or her, nothing but good, both physically and mentally.

I only wish that some of the "old hands" I have met were as considerate in their driving as the youngsters I have met—or as cheerful in the case of a breakdown!

O. P. C. COLLIER.

Sir,—My eldest boy, before he was 14 years of age, came into possession of a very ancient 2¾ h.p. F.N. machine. It was at least six years old, and looked more. He took the whole thing to pieces, engine and all, cleaned it up, and re-assembled it. The old-fashioned tappets were very badly worn, and I helped him to turn new ones on my little 4in. lathe out of some steel rods which had belonged to an old sewing machine. After re-assembling and re-enamelling, the old bike looked quite smart, and, more wonderful still, *she went!* On the boy's fourteenth birthday I presented him with the price of a driver's licence. That was five years ago, and he has since ridden some thousands of miles on the same old bus. Now will anyone say that a boy who could take down, repair, and re-assemble a motor cycle at that age is not better qualified to drive one on the open road than a middle-aged duffer whose fingers are all thumbs, and who does not know which way to turn a screw?

WM. F. A. ELLISON.

### *ON WHICH SIDE DO YOU FALL?*

Sir,—A correspondent mentions that in nine out of every ten cases a machine is damaged on the near side.

I appear to be the tenth case.

I have had several skids and sideslips this winter, and in each case I have hit the ground and damaged the offside of the machine.

I suggest that the following explanation is the cause:—

I always mount my machine from the offside and dismount from the offside.

In case of any danger my right leg is the first to leave the footrest. Therefore at the slightest sign of danger my weight is automatically thrown to the offside, and in case of a sideslip the machine falls on the offside. G.P.H.

Watford.

Sir,—I am very much interested in Mr. Leslie Lyon's statement that in nine cases out of ten a tumble, or sideslip, results in the machine being damaged on the near side, I myself having the same experience.

My theory is, one mounts a machine from the near side in nearly all cases, therefore there is a natural tendency when danger occurs to bring oneself over to the left if it is possible. In fact, quite a number of people find it much easier to make a left-hand turn on this account than they would a right.

E. RICHARDS.

### *GREASE NAVIGATION ON A PRE-WAR SINGLE.*

Sir,—I see that "Troubled" has difficulty in keeping a straight course on his 1910 single-geared Triumph when riding on grease.

Perhaps his trouble may be caused by the same things that caused rolling on grease on my 1912 Triumph. I have ridden it about 13,000 miles since I bought it in 1920, and I have now no trouble in keeping a straight course. I found that my trouble was:—

(1.) The ball races in the head and forks were badly worn, so that the steering was stiff and the forks were not smooth in action. I fitted new ball races, and made the head and forks work properly.

(2.) The barrel spring of the forks was not a genuine Triumph spring; it was too long, thus shortening the wheel base and restricting the movement of the forks. I fitted a genuine Triumph spring.

(3.) I find that running slowly on a gear that is too high will cause skidding, because the back wheel jumps at each power impulse. I have an adjustable pulley, but I carry two belts, an inch belt (top gear) and a ⅞in. belt (low gear for riding on greasy tram lines). I hold the bars firmly (but not as if I am trying to bend them), and I grip the tank with my knees.

I use W.D. Triumph flat bars, the saddle is as near the centre of the machine as possible, and the footrests are 4in. below and 1in. to the rear of the old pedalling gear bearing.

H. N. W. GOSS.

### *THE A.C.U. AND PRIVATE TRIALS.*

Sir,—Many points have been well ventilated, but I do not understand why Mr. A. E. Curtis should require "every intelligent motor cyclist" to support Mr. Loughborough's attitude. Who constitute the "certain type of rider" who "object to being dictated to in the matter of sport"? I should say 99 per cent. of the total motor cyclists living. Surely we have a sufficient number of restrictions and obligations enforced by the police (bearable only because they are more or less necessary) not to want more regulations from unnecessary sources.

If the only objections to these trials are the facts that unofficial figures may be published, and that "the ordinary private owner, without opportunity or inclination to investigate the claims of all and sundry, would simply be unable to come to a reliable opinion," then we need consider these objections very little. The experienced motor cyclist can always judge for himself; the beginner, if starting in a small way, would buy the best machine within his reach, while if buying a new machine he would, without doubt, get advice from an experienced friend. In any case, "the art of the advertisement writer" is likely to be overshadowed by the art of the salesman.

So I repeat, but without any gibe, Mr. Curtis's words, "By all means let Mr. Booth promote his petrol consumption competition if it amuses him." Doubtless there is a sufficient number of good sportsmen who will back him up, and therein find amusement, too.

I, as one of the ordinary private owners, shall be grateful to know what may reasonably be expected from an ordinary machine in ordinary hands.

L. WAKEFORD.

### ULTRA-RAPID AMERICAN TWINS.

Sir,—I would like "Triumph" to know of one of my experiences with a Yankee big twin. Last summer a friend and I went on a tour of four days, during which time we covered some 600 odd miles. The machine was not repaired or adjusted throughout the trip. On our return journey we touched 63 m.p.h., my friend weighing 11st. 8lb., myself 11st. 4lb. We carried a full two-gallon tin of petrol, kit of tools, and two suitcases. The machine had at that time covered just over 5,000 miles. HARLEY.

London, W.9.

Sir,—"Triumph" may now be disposed to believe the statement that an extra passenger on the carrier has *very little* effect upon the speed of a solo machine on the level.

We are loth to appear "Doubting Thomases," but, as we happen to reside quite close to, and consequently know, the stretch of road referred to, we cannot share "Triumph's" optimism in regard to the speeds mentioned.

B. WHOMES.
L. W. G. HARTLEY.

Sir,—The other day, while jazzing to the South Coast from London on my 1 h.p. Tish-Tosh with two passengers in the sidecar and one on the pillion seat (I usually carry two here), I saw in front of me a moving object of enormous dimensions. On passing it I noticed that it was Count Z--b--ky's wonderful 3,000 h.p. X.Y.Z.

A minute or so passed, when up he rushed! Zing! I immediately opened up, and we ran parallel for some ten miles or so, when he began to draw away from me, although my Bon--k--n (geared up 1 to 10) showed 98.765 m.p.h.

For the benefit of your correspondent, I might add that seventeen drops of water in the float chamber and a small amount of bird seed in the oil tank considerably lessen the time taken on these record runs. HANDLEBARS.

Friern Lane.

Sir,—Your correspondent "Triumph" is, I think, mistaken in his conclusion that the "ultra-rapid" qualities are confined to American machines. My own experience last summer, when driving my 12-cylinder car in the early morning, was somewhat similar to his. On a perfectly open, wide, safe road, I was travelling just over 40 m.p.h. when I received warning toots and was somewhat surprised to be rapidly overtaken by a procession of three motor cyclists, who yelled a cheery invitation to speed up. The first was passed at 52 to 53 m.p.h., the second at 58, whilst the fleetest took a lot of catching at 63. I noticed that each cycle was a B.S.A. I make no apologies for this furious speeding, as the conditions were ideal, the time 6 a.m., and the safety of no one but ourselves was imperilled. As an old motor cyclist (1906-7) I was greatly impressed with the beautiful rhythm and speed of these machines, each well laden with a lusty rider and full kit of luggage, also with the cheeriness and sportsmanship of the "tourers."

"1906-1922."

Wallasey.

QUEUEING FOR THE CLIMB. Scenes of this sort are by no means uncommon in 1922 trials, where fear of baulking on a freak hill results in a check and consequently a queue of waiting competitors at the foot.

Sir,—I should like to reply to "Triumph's" remarks re speeds of a blue Indian and his own 'bus between Swanley and Farningham.

Riding a 1915 7 h.p. R.R. Indian in this district, and knowing every inch of the roads and lanes, I should like to ask exactly where 64 m.p.h. was obtained, for I do not know of a stretch of road between these two towns on which I should dare to attempt such high speeds—especially on a Saturday afternoon. JACK LINGGOOD.

Sir,—It might interest "Triumph" to know that the Indian he mentions has never done more than 60 m.p.h. solo, let alone 66 m.p.h. two up, in its six years of existence. Also the machine is not a so-called "Blue Indian," but merely a repainted red one. ZENITH.

### TWO-STROKE EFFICIENCY.

Sir,—How does Mrs. Mary C. Jennison explain the fact that long-distance records were held by the 350 c.c. Alecto 2-stroke? (I am presuming this machine had a cast-iron cylinder and a normal bore-stroke ratio.) R.R.

Birmingham.

### POSSIBILITIES OF THE WIMSHURST INFLUENCE MACHINE ON I.C. ENGINES.

Sir,—Referring to the letter on the above question, it scarcely seems possible that any machine which depends wholly on an infinitely high state of insulation in all parts could be made to give good results for general ignition purposes, as damp air alone is quite sufficient to cause total failure.

One of the greatest sources of trouble in all electro-static machines is failure to "build up" owing to leakage of the residual charge of electricity, either through or across the insulation, or through the air. This difficulty seems, so far, quite impossible to overcome entirely, the quantity of electricity being extremely minute, but at a very high potential.

A certain amount of improvement might be effected by enclosing the whole in a case containing compressed air, but this would at once introduce mechanical objections when seen from the motorist's point of view.

Admitting that machines of the Wimshurst type will give very powerful discharges at long intervals, it is doubtful whether sparks sufficiently powerful to jump the sparking plug points and not brush across the porcelain could be got in succession rapidly enough for a high-speed engine.

It may be said that these criticisms relate only to the present state of development, and take no account of the future possibilities of the static machine; but, all considered, there seems but little hope of improvement over the magneto by its adoption, either on the question of size, weight, reliability, or cost of production.

It would be interesting to know how Mr. Freeman Lee arrives at the theoretical output and the useful output of 5 per cent. of a Wimshurst machine.

H. W. BAKER.

### COMPLICATED COASTING.

Sir,—Having owned various machines for the last ten years, commencing at the age of 14 (I hasten to add I was neither reckless nor irresponsible), I should like to explain to Mr. F. Walker the method of coasting which has proved so successful during my experience with both fixed engined and multi-geared 'buses.

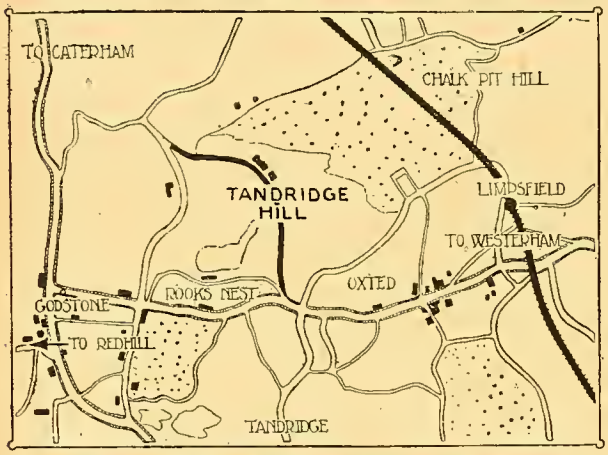
When coasting down the average main road hill with a multi-geared machine, descend in top gear with the throttle shut and air wide open. Thus, it will be seen, that although no petrol is being consumed, the engine is being turned over and is sucking in clean, cool air into the cylinder, which has a cooling effect, and not that of distortion; then with a touch on the throttle lever the engine will start up when desired.

Should the descent be steep, a lower gear will have greater braking effects, should that be deemed necessary.

Concluding, one should never descend a hill in neutral, as it may become necessary to "shovel the coals on" at a moment's notice. LOUIS FIELD NORTON.

### WHEN BORED WITH MAIN ROADS.

Sir,—It may be of interest to you to know that a very good hill for a sporting trial is situated in the Oxted district, and I enclose a very rough map, which will enable you to see exactly where it is to be found (Tandridge Hill).



Map showing the location of Tandridge Hill, referred to by Mr. G. Collard.

G. COLLARD.

### JUSTIFYING THE FREAK TRIAL.

Sir,—There appears to have been considerable comment caused recently by the introduction in reliability trials of hills and surfaces, over which, until a short time ago, it was assumed that no sane motorist would wish to travel. Has it never occurred to your readers that these various roads and by-roads (erroneously termed "colonial tracks"), do not exist merely for the sake of providing trials promoters with courses, but that they serve some other useful purpose also. It is quite possible to find habitations alongside these tracks, and more often than not, the local inhabitants number amongst them several users of motor cycles, whose only means of reaching home is along these self-same paths.

We, ourselves, are fortunate in having the Peak District close to hand for the purpose of testing our gears, and many times our testers have driven up and down these by-lanes with heavily laden sidecars for the purpose of discovering whether any latent defect might become evident after prolonged use of one or the other low gears.

We think we are right in stating that practically every track of suitable width in this district has been travelled over "three up" on one of our testing outfits, and therefore we see no cause for grumbling on the part of some would-be sportsmen who find that their progress is barred by an obstacle such as they are not accustomed to meet in the more southern part of the kingdom.

Competitions are presumably arranged for finding the best combination of machine and rider, and we hardly think it fair to expect more than a very small proportion indeed of competitors to obtain medals. The absurdity which has recently arisen in the Victory Trial, where out of approximately two hundred and eight competitors eighty-one obtained gold medals, and fifty-two silver medals, is self-evident. We fail to see what advertising value a medal in such a case can possess, as apparently every manufacturer seems to have won one of some sort. Apparently in such a case the award means little more than that machine and rider have succeeded in finishing the course. Surely it is the manner of finishing the course, and not the fact of finishing, that should be the essential point in making awards. I. COHEN.

John Jardine, Ltd.

### REAR LIGHTS FOR ALL.

Sir,—The cyclists' arguments against rear lights are perfectly sound, but like so many other theories, complications step in and make modifications necessary in actual practice. The complication in this case is that of dazzle, and I consider this to be the deciding factor in the whole problem. After being half blinded by one of the "double million magnifying" projectors (as Sam Weller would have described them) demanded by cyclists to justify their case, a live light ahead is about the only thing visible to the overtaking motorist, and at any speed over 12 m.p.h. an unlighted object ahead is a real danger till the eyes have regained their normal condition. No pedestrian with any sense will disport himself in the middle of the road with his shadow in front proclaiming the presence of an overtaking vehicle, and besides pedestrians and cyclists there are very few unlightable objects on the main roads where the dazzle nuisance is met with.

The answer to this problem will be given in the future, when the importance of fast road travel is recognised, and when, excepting pedestrians, unlightable road users will not be allowed on main roads at night, any more than Tom, Dick, and Harry are allowed to play marbles between the tracks of the Great Western Railway after school hours.

LESLIE LYONS.

Sir,—For some time past the Committee of the North Eastern Automobile Association has been interesting itself in the agitation for the reimposition of the regulation making the carrying of rear lights on bicycles compulsory.

This is not a question of inflicting any hardship upon cyclists, as rear lights are inexpensive, easily fitted, and there is no difficulty or danger in keeping them alight, as was proved during the war years while the regulation was in force. Further, motor cyclists, who are about the fastest travellers on the road will also be required to carry a rear light.

But it is chiefly in the interests of cyclists themselves that the regulation is desired. There have been lately several accidents, due to no fault on the part of motorists, in which users of bicycles have been injured more or less seriously, and it is therefore for their own sakes that the reform is desired.

J. E. HODGKIN, Hon. Sec., N.E.A.A.

Sir,—Personally I consider rear lamps are an abomination and absolutely unreliable, firstly because all rear lamps are minute, and in the case of acetylene the burner is very small, with very low pressure in the tube. Remembering that rear lamps are at the extreme rear of the machine and get heavy jolting, it does not require the use of much grey matter to realise that they are much more easily extinguished than head lamps, which are on the best sprung part of the machine.

At present night runs are one of my greatest pleasures, but, before, I never went out after dark unless forced to, because every few yards I had to screw round to see if the blinkin' rear lamp had finally blinked.

In a smash it's the carrier, or non-carrier, of the rear light who gets hurt, and not the overtaking car—so why all this sob stuff about the "common good to all," etc?

TRIUMPH SOLO.

Manchester.

Sir,—I feel very angry with Angus Macdonald, in spite of his name, and feel sure that he is a constant danger on his Highland roads.

I should like to catch him up, some dark night, when he and his flock were spread over the road and I was driving a Foden. WILLIAM H. KENT.

### *AN AMATEUR ROAD RACE.*

Sir,—With reference to the proposed Amateur Road Race, I think that if the entry fee were definitely fixed at £5 and *no* surplus were returned, the race would receive more support.

To take one's machine to the Island and stay for, say, two weeks will cost at least £10, and on top of this we are asked £10 for an entry fee.

I am also of the opinion that a class should be formed for owners of 600 c.c. dual purpose mounts such as the following: 4 h.p. Triumph, 3¾ h.p. Scott, 4 h.p. Norton, 4 h.p. Douglas, etc.

It cannot be said that these machines will be too fast for the course, as the 3½ h.p. sporting models made by the above firms are much faster. AMATEUR.

Southport.

Sir,—Why not, as suggested in an earlier article in *The Motor Cycle*, endeavour to prevent any advertising of successes in the Amateur Race? This would most effectually put a stop to possible faking by interested trade men.

Secondly, why does the Manx M.C.C. worry about A.C.U. "permission to apply for a permit" at all? If the Manx authorities are willing—well. "—UMPH!"

London, W.C.2.

### *RADIATION OF HEAT.*

Sir,—Your contributor "E.N.J." falls into a very popular error in his article on "Radiation of Heat" when he states that the heat from the outside of the cylinder wall is dissipated by radiation.

The amount so dissipated is very small compared with the total amount to be dealt with.

Radiation is proportional to the fourth power of the absolute temperature, and, at the comparatively low temperature of the cylinder, radiation is of very little value. This would become very obvious if the cylinder were enclosed in a vacuum, or even in a small closed glass box (glass being practically transparent to radiant heat).

The real cooling effect is due to convection; not the convection caused by the heat, but by each particle of air being heated by direct contact with the cylinder as it passes in the stream caused by the motion of the machine.

So although the cooling will be improved by a dull black finish on the cylinder, such improvement will be too small to be detected by ordinary means. P. BREWSTER.

### *ARTIFICIAL OBSTACLES.*

Sir,—In reference to Mr. Newman's amusing letter in your last issue, I regret that I cannot give him the names of any guilty of all the terrible offences he enumerates.

Respecting Gorsey Bank, doubtless your correspondent will recollect that he himself successfully negotiated the water splash there on the occasion of the Leicester Club's Winter Trial in 1921, when it was a miniature lake. This time, under easier conditions, more than one-half the competitors succeeded, and he failed. Hence the squeal.

Cross Keys, Loughborough. A. PRINCE.

### *RIDING COMFORT.*

Sir,—We are pleased to see in your issue of the 23rd ult. that "Friar John," in "Passenger Machine Topics," draws a comparison between the average vehicle and the Chesterfield chair, for which anything up to £20 is frequently paid, this after a most critical and justified examination.

We cannot understand why some motor cyclists will pay such careful attention to the engine and machinery portions of the machine, apparently forgetting entirely that their own concern is to sit on this machine during the whole of its useful service. In this way they must spend, at any rate during the summer months, a very much longer period of their lives in the saddle than in the expensive Chesterfield chair.

H. T. BALLEMY.
(For J. B. Brooks & Co., Ltd.).

### *4 H.P. AEROPLANES.*

Sir,—I was much interested to see that "Ixion" in his "Occasional Comments" voices his regret that the day of the £100 aeroplane has not yet arrived.

This is a fact, as regards flying as we have become accustomed to see it of late years, but I firmly believe that *modest* flying is within the means of the comparatively impecunious, and that for a sum much less than that mentioned a small party of enthusiasts could build themselves a machine capable of giving them much pleasure.

I emphasise the word "modest," for high speed, high altitude and long distance all demand big engines, which mean big cost, both original and upkeep

The writer has built many aeroplanes since the far-off days of 1909, of various types, from four man-power (ground speed 9 m.p.h.) to "Hun strafers" of the hottest; so, although he is quite prepared for the howl of derision which is bound to greet his views, he is not entirely talking through his hat.

The ideal I have in view is a machine of extremely light weight, large surface, slow speed and small engine power, and obviously limited to use in favourable weather, and within the limits of good ground.

I have discussed the project frequently with an eminent designer of war-time machines, who, at first sceptical, on making rough calculations, expressed the opinion that the plan was certainly not hopeless, and that 4 h.p. would probably be sufficient for the machine in view, and an air speed of 25 m.p.h. attainable.

I am afraid the question of design and cost would occupy too much space to be entered into, but I have not ignored these, and in conclusion should like to point out to those interested that German amateurs have devoted much work along these lines since the war, and have achieved remarkable success with featherweight machines without engines, flights of eight miles in length and fourteen minutes' duration having been officially recorded.

"NUTANSPLITPIN."

Birmingham.

### *CLEANING CELLULOID SCREENS.*

Sir,—I am sending the following hint in the hope that it may benefit your numerous readers who are blessed (or cursed) with celluloid windscreens.

Mix some whiting and olive oil into a smooth paste and rub well into the celluloid with a soft cloth. When the marks have been removed wipe as much of the paste off as possible and sprinkle with french chalk. Leave for a few minutes for the chalk to soak up any oil which may remain and then polish off.

The above treatment will remove all marks and small scratches, and is recommended by one of the leading celluloid manufacturers. ROBERT CHATTERTON.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook of the motor cycle.
Price net 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "Ixion," of *The Motor Cycle*.
Cloth Bound. Price, 5/-. By post, 5/3.
Paper Boards. Price, 2/6. By post, 2/9.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

# PLAIN WORDS ON PILLION RIDING.

## Passenger's Position a Less Important Safety Factor than the Driver's Capability and his Companion's Mentality.

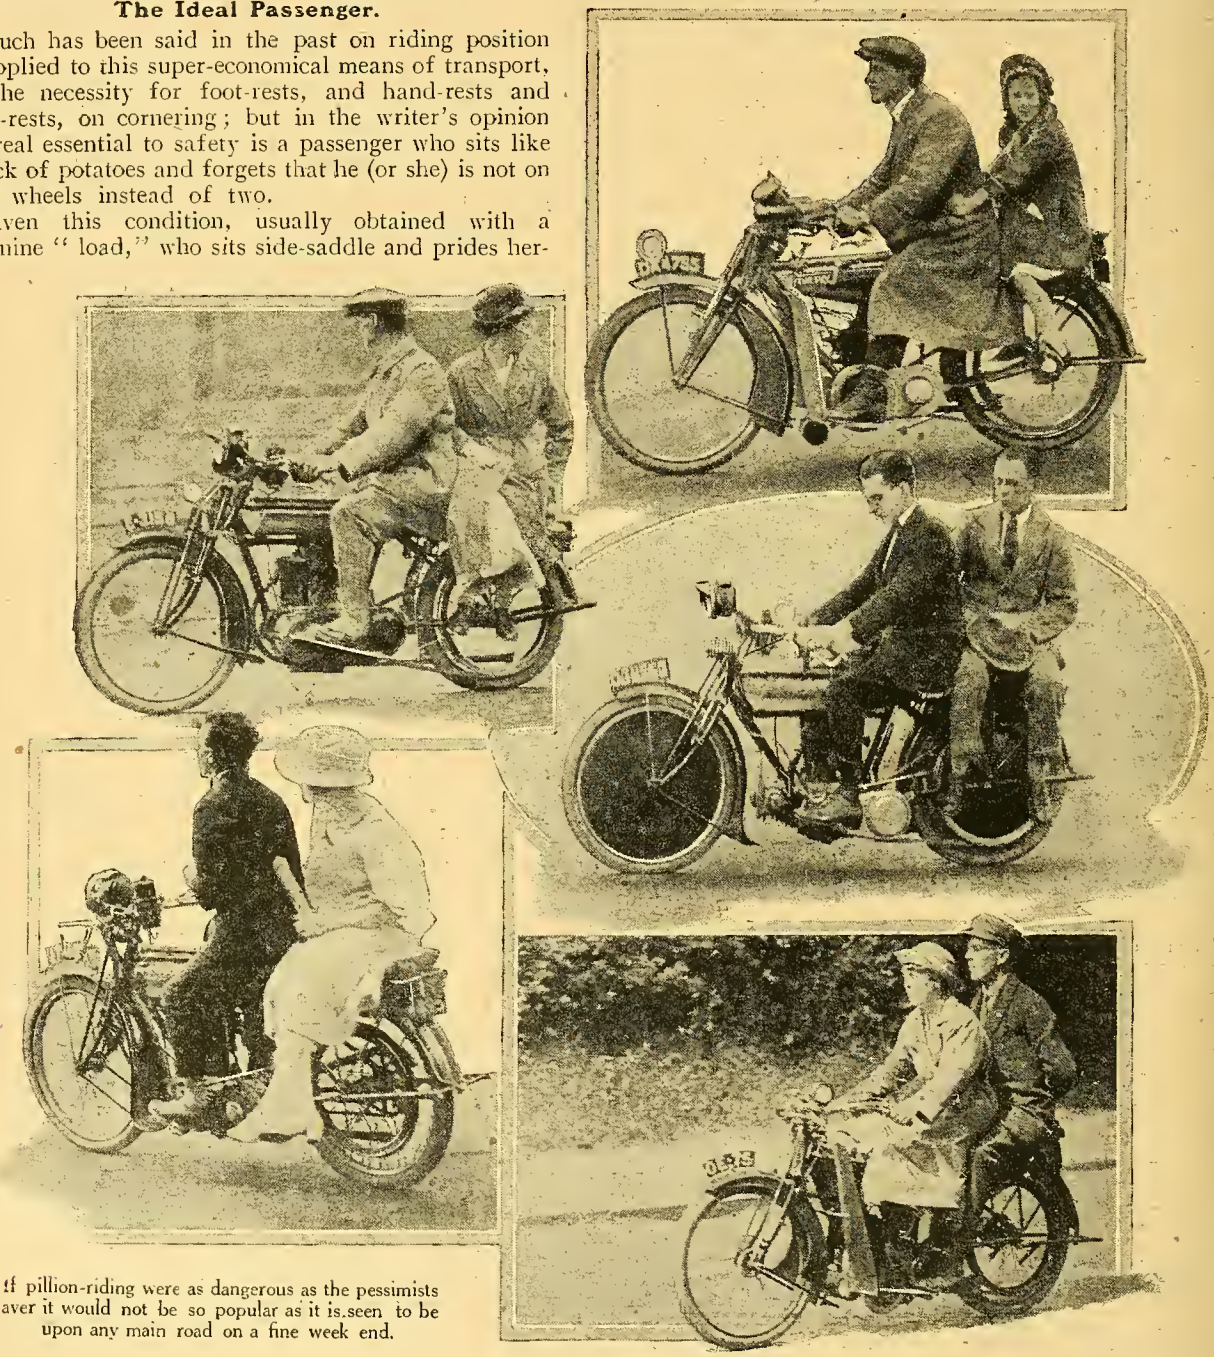
PILLION riding is somewhat of a contradiction. With an experienced and careful driver and a passenger entirely ignorant of motor cycles and oblivious to traffic problems it is as safe as walking, perhaps more so. With an uncertain driver and a nervous and traffic-wise passenger it may be very dangerous.

### The Ideal Passenger.

Much has been said in the past on riding position as applied to this super-economical means of transport, on the necessity for foot-rests, and hand-rests and back-rests, on cornering; but in the writer's opinion the real essential to safety is a passenger who sits like a sack of potatoes and forgets that he (or she) is not on four wheels instead of two.

Given this condition, usually obtained with a feminine "load," who sits side-saddle and prides herself on the fact that she does *not* hang on, insurance companies would cease to increase their premiums for the privilege.

For comfort a spring seat is a decided improvement, but unless it has been thoughtfully designed it may display a tendency to side-roll as well as raise the centre of gravity of the outfit—two serious faults.



If pillion-riding were as dangerous as the pessimists aver it would not be so popular as it is seen to be upon any main road on a fine week end.

# CLUB NEWS.

YORKSHIRE CLUB ENTHUSIASTS. Scene at the opening rally of the Sheffield and Hallamshire M.C. and L.C.C. at Millhouses. Although cold, dull weather prevailed, a good number attended.

### St. Anne's-on-Sea M.C.C.

A club has been formed at St. Anne's, near Blackpool, with Mr. F. Knutton as the president, and Mr. F. Dearden as hon. secretary.

### South-East Durham M.C.

On Easter Monday the club will hold a reliability trial to Kirkby Stephen and back; distance, 140 miles.

### Bishop Auckland M.C.C. and Durham and District M.C.C.

Supported by the Stockton, Darlington, Hartlepool, Pelton, Annfield Plain, and South-East Durham Clubs, an important hill-climb will be held at Legs Cross Hill on Easter Monday. Particulars may be obtained from Mr. W. Hedley, Lloyds Bank Chambers, Durham.

### Prestwich and District M.C.C.

Taking the form of a speed-judging contest, the opening run took place on the 19th ult. In spite of the dubious nature of the weather, quite 75 per cent. of the members completed the 30 mile course of Cheshire lanes. A trail of flour was laid, the route being unknown to competitors previous to the run. Results have now been announced as follows:—

1, W. Brown (3½ Rover sc.), 2 secs. error; 2, R. Murphy (2¾ Wolf), 30 secs. error.
Booby Prize. W. Weaver (4¼ B.S.A. sc.).
Award for Pluckiest Attempt: Miss K. Hands (2¼ Calthorpe).

### Natal M.C.C.

On Saturday, March 11th, the club held its second hill-climb for the Aggregate Cup on Van der Spuy's Hill. The surface was good, and some fair times were put up. The results are as follows:

1. C. H. Young (3½ Triumph).
2. D. Gelderd (2½ Singer).
3. C. Woodward (3½ Norton).

It will be seen that British machines can more than hold their own as far as Natal is concerned.

### Durham and District M.C.C.

Entitled, on the topically humorous menu card, the "1922 Inaugural Competition, Consumption Trial," the club's recent annual dinner was well in keeping with this hint of a cheery atmosphere.

### Bloxwich and District M.C.C.

Humorously illustrated and arranged in the form of a trial's route card, the programme of the club's recent dance formed not the least important contribution to an enjoyable evening.

### Skipton M.C. and L.C.C.

The opening run was made to Ingleton on April 2nd. A good number of members turned out, and a most enjoyable day was spent in the "Land of Waterfalls." The scenery at Ingleton is perfect, and club secretaries who wish to arrange a lovely day's outing could not do better than include a run to Ingleton in their fixtures.

### Bradford M.C. and L.C.C.

To the strains of the Rosedale Abbey Brass Band, the annual freak climb of Rosedale Abbey Bank for the Fell Cup will be held on the 23rd inst.

### Biggleswade and District M.C.C.

Three new challenge cups have been donated, and there is a general enthusiasm which, it is hoped, will continue through the year. The club opens its activities on Good Friday afternoon, when a paperchase open to all motorists in the district is to be held.

### Ferryhill and District M.C.C. (Durham).

Nearly forty members have already been enrolled, and further applications are being received daily. Richmond Meet on Good Friday will form the object of the opening run. Particulars may be obtained from Mr. R. E. Gittens, 35, Morrison Terrace.

A northern club's opening run. Members of the Westmorland M.C.C. at Brough.

### Pendle Forest M.C.C.

Over three circuits of a nineteen-mile course, including numerous freak hills, a reliability trial will be held on the 15th inst. Entry forms may be obtained from the hon. secretary, Mr. C. Dyson, Cherry Tree Cottage, Higham, Burnley.

### Brighton and Hove M.C.C.

On the 26th ult. the club opened its competition season with a well supported hill-climb, at Varncomb, near Saddlescombe. Entries numbered 100, and the event was witnessed by a large crowd of interested spectators. Lewes, Horsham, and Eastbourne club members took part. The average gradient was 1 in 9, and the length of the course was ¼ mile. Results :—

### Wallington and District M.C. and L.C.C.

On Wednesday, April 19th, the club is holding a short evening trial for the President's Cup (to be won outright). The start will be from the Triangle, Wallington, at 5 p.m.

### Bristol M.C. and L.C.C.

What was described as a "Mystery Trial" was held recently; it consisted of a fifty-mile course of varied character, run in five sections, each covered by sealed orders which were opened by the checkers. Thus the 25 riders were quite in the dark as to the direction of each succeeding section, and being set the task of keeping to a secret time schedule without the distance being known, they were kept guessing all the way to the finish, where competitors and helpers to the number of over 40 took tea. Results:—

1, H. Walker (3½ Norton sc.); 2, H. Challenger (3½ Triumph sc.); 3, A. E. Le Brun (3½ Rudge); 4, H. C. Walters (8 Ariel sc.).

### Bristol M.C. and L.C.C. and Bath M.C.

These two live clubs, having a joint membership approaching three hundred, were amongst the most eager supporters of the Centre scheme when it was formed, and have taken a very prominent part in the affairs of the Western Centre A.C.U. both financially and in arranging events. The open trial of this Centre, organised over a course the most difficult sections of which were in the particular "hunting grounds" of these clubs, has been the cause of differences of opinion which have resulted in both clubs signifying their intention of withdrawing from the Centre.

### Leamington Spa M.C.C.

Under the above title a club has been formed, with Mr. F. A. Boggis, 53, Clarendon Avenue, as secretary.

### Sheffield and Hallamshire M.C. & L.C.C.

Arrangements for the Traders' Team Trial were on the lines of the M.C.C. Inter-team Trial (*i.e.*, 3 circuits of a given course; stop causes disqualification; petrol to be carried, etc.).

Five teams, each consisting of three solo and three sidecar machines, faced the starter. The course was round Stocksbridge. The tit-bit of the trial was undoubtedly Windhill Lane, where, although the gradient is comparatively easy, the surface, except at the very top, is simply a mass of slime. On the first circuit several machines failed, wheel slip and, in one case, a skid into the wall on the right-hand side being the causes. On the second circuit some fine climbs were made. R. May (3½ Norton) came up steadily; F. Hall (Indian sc.) tore up at speed, hugging the right-hand side; R. L. B. Taylor (2¼ Levis), riding the smallest powered machine in the trial, came up in good style with power to spare; J. Younie (5-6 Martinsyde sc.) came up very slowly but with an entire absence of wheel slip, his machine being the steadiest performer on the hill; but undoubtedly the fastest ascent was made by Reg. Stacey (7-9 Harley sc.), who literally streaked up the hill with a grim expression on his face. The trophy is won by the "Holmes and Younie, Limited," team, consisting of:—

L. Adams (3½ Martinsyde), R. L. B. Taylor (2¼ Levis), L. Hayward (3½ Sunbeam), J. M. Younie (5-6 Martinsyde sc.), G. W. Wilkin (5-6 Martinsyde sc.), A. Blake (5-6 Brough sc.)

AN OFFICIALLY OBSERVED TEST OVER DARTMOOR. Under A.C.U. observation, a 2¼ h.p. Levis and a 4 h.p. Norton sidecar successfully accomplished a journey from Exeter to Penzance and back on six consecutive days. The daily run was 240 miles, part of the route being across Dartmoor which on several occasions was covered with snow. The two machines under test are in the foreground, and the A.C.U. official observer on the machine in the rear. Pike & Co., of Exeter, were the organisers of the trial.

### Dunheved (Launceston) & District M.C.C.

At the annual meeting the secretary (Mr. Maurice Prout) reported a balance in hand (including prizes in stock) of £32. A feeling of optimism prevailed as to the club's future.

### Coventry and Warwickshire M.C.

There were forty-four starters for last Saturday's trial for the Cole Cup (presented by Lieut.-Col. Cole, the president), and thirty-three finished. The route, including an acceleration test, lay in the Cotswolds, and the weather, especially in the morning, was bad. No award has yet been made, but it is known that very little margin separates the leaders.

### Darlington and District M.C.

Sixteen enthusiasts competed in the reliability trial held on the 2nd inst. The course was a very sporting one, including Peat Hill and Loftley Hill and water-splashes, the difficulties being increased by the snow-covered moors.

The winner of the C. W. Smith Cup proved to be C. Bone (4 Triumph), the second prize falling to J. M. Richmond (3½ Norton sc.), third B. M. Fox (4 Triumph).

### North Wales M.C.C.

On Thursday last the club held its opening reliability trial. The route lay over a really sporting course of 53 miles, and included five observed hills, of which two are well known as "North Wales terrors." All kinds of roads were encountered, also one stretch of mountain track upon which lay over eighteen inches of snow. Provisional results:

| | Marks lost. |
|---|---|
| 1. R. R. Bromley (3½ Sunbeam) ... | 1 |
| 2. F. T. Jones (3½ Sunbeam) ... | 5 |
| 3. S. W. Smith (3½ Scott Squirrel) | 5 |

### Cork and District M.C.C.

Results of the series of interesting events at Five Mile Bridge have now been announced as follows:—

FLEXIBILITY TEST.

SIDECAR MACHINES UNDER 600 C.C.—1, A. Wilson (3½ Sunbeam sc.); 2, C. M. Ryan (4 Triumph sc.).

SIDECAR MACHINES OVER 600 C.C.—1, C. S. Hosford (8 Blackburne sc.), 2, C. A. Murphy (6 Enfield sc.), R. J. Swanton (7 Indian sc.), and Reg. Good (4 Norton sc.), equal.

SOLO MACHINES UNDER 350 C.C.—1, J. Gibbings (2¾ A.J.S.); 2, J. Healy (2¾ A.J.S.); 3, J. O'Sullivan (2¾ A.J.S.).

SOLO MACHINES, 350 TO 600 C.C.—1, J. Mulligao (3½ Triumph); 2, W. Waterman (3½ Sports Douglas); 3, J. Wilson (3 A.B.C.).

SOLO MACHINES OVER 600 C.C.—1, Raymond Good (4 Norton); 2, C. A. Murphy (6 Enfield).

STOPPING AND RE-STARTING TEST.

SIDECARS OVER 600 C.C.—1, C. S. Hosford (8 Blackburne sc.); 2, R. J. Swanton (7 Indian sc.); 3, Reg. Good (4 Norton sc.).

SOLO MACHINES UNDER 350 C.C.—1, J. Gibbings (2¾ A.J.S.); 2, T. O'Sullivan (2¾ A.J.S.); 3, —. Browne (2¼ Diamond).

SOLO MACHINES, 350 TO 600 C.C.—1, J. Mulligan (3½ Triumph); 2, J. A. Wilson (3 A.B.C.); 3, J. Ryan (3½ Indian Scout).

SOLO MACHINES OVER 600 C.C.—1, Raymond Good (4 Norton); 2, C. A. Murphy.

FAST CLIMB.

SIDECAR MACHINES OVER 600 C.C.—1, C. S. Hosford (8 Blackburne sc.); 2, Reg. Good (4 Norton sc.); 3, R. J. Swanton (7 Indian sc.).

SOLO MACHINES UNDER 350 C.C.—J. O'Sullivan (2¾ A.J.S.), w.o.

SOLO MACHINES, 350-600 C.C.—1, J. Mulligan (3½ Triumph); 2, W. Waterman (3½ Sports Douglas); 3, R. S. Russell (3¾ Scott).

SOLO MACHINES OVER 600 C.C.—1, Raymond Good (4 Norton); 2, C. A. Murphy (6 Enfield).

(6–12)

## Week-End Club Events.

*April 14th.—Ipswich and District M.C. and Norfolk M.C. and L.C.C.—Inter-Club Reliability Trial.*
*April 14th.—Kent Clubs Hill Climb at Vigo Hill.*
*April 14th.—Reigate, Redhill and District M.C.C.—Run to Bognor.*
*April 14th.—Worcester and District M.C.C.—Half Day Reliability Trial.*
*April 14th.—Rochester, Chatham and District M.C. and L.C.C.—Hill Climb.*
*April 14th.—Berkhamsted and District M.C.C.—Challenge Cups.*
*April 15th.—Birmingham M.C.C.—Trial to Weston-super-Mare for Sangster Cup.*
*April 15th–17th.—S. Birmingham M.C.C.—Birmingham to Lynmouth. Birmingham Trial.*
*April 15th.—Coatbridge, Airdrie and District M.C.C.—Run to Lanark.*
*April 15th.—Kidderminster M.C.C.—Social Run.*
*April 15th.—Coventry Triangle M.C.—Run to Napton.*
*April 16th.—Manchester M.C.—Social Run.*
*April 16th.—Northern Centre A.C.U.—Rally at Dungeon Ghyll.*
*April 16th.—Halifax and District M.C.C.—Run to Edinburgh.*
*April 16th.—Darlington and District M.C.—Run to Ravenstonedale.*
*April 16th.—Coventry Triangle M.C.—Run to Earlswood Lake.*
*April 16th.—Featherstone and District M.C.C.—Run to Bawtry.*
*April 16th.—Sheffield M.C.C.—Run to Ashford-in-the-Water.*
*April 17th.—Neath and District M.C.—Speed Trials at Porthcawl.*
*April 17th.—Colchester and District M.C. and Bury St. Edmunds M.C.—Inter-Club Hill Climb.*
*April 17th.—Bishop Auckland M.C. and Durham District M.C.C.—Inter-Club Hill Climb.*
*April 17th.—Scarborough and District M.C.—Staxton Hill Climb.*
*April 17th.—Eastbourne and District M.C.C.—Hill Climb.*
*April 17th.—S.E. Durham M.C.—Reliability Trial.*
*April 17th.—Barrow and District M.C.—Run to Gunner's Howe.*
*April 17th.—Blaxwich and District M.C.C.—One-Day Reliability Trial.*
*April 17th.—Avon M.C.C.—Social Run.*
*April 17th.—Gloucester M.C. and L.C.C.—Run to Cheddar Gorge.*
*April 19th.—Wallington and District M.C. and L.C.C.—Evening Trial for the President's Cup.*
*April 20th.—Dunheved (Launcestan) and District M.C.C.—Hill Climb.*

### Newcastle and Northern M.C.

During the past few months several attempts have been made to bring about an amalgamation between the three Newcastle motor organisations, and in that way do away with a great deal of the overlapping and useless expenditure caused by having three separate clubs. The idea culminated in a joint general meeting of two of the clubs, which was held in the Crow's Nest, Newcastle, on the 30th ult., at which the amalgamation was sealed.

Mr. W. Stevenson, a member of the Newcastle daily Press, acted as neutral chairman, and business was pushed forward harmoniously. The members were were unanimously in favour of the amalgamation, and when Mr. Atkinson suggested that the title of the new club should be the Newcastle and Northern M.C. his suggestion met with instant approval, and was adopted.

The meeting fixed the annual subscription at 10s. 6d., and decided that the question of an entrance fee should be waived.

### Reigate, Redhill and District M.C.C.

The results of a paperchase held recently were as follows: 1, R. T. Alderton (3½ Norton); 2, H. Hudson (3 A.B.C.); 3, W. D. Steyning (5 Zenith).

### Austin L.C. and M.C.C.

With headquarters at the Longbridge factory, Northfield, Birmingham, yet another works club has been formed in the Midlands; and a successful opening run was held on the 1st inst. to the Old Hundred House, Whitley Court.

### Cardiff M.C.C.

The first event of the year, a reliability run, will take place on Wednesday, April 19th. All prospective entrants should communicate with the hon. sports organiser, Mr. E. R. Mitchell, 29, Llanfair Road, Cardiff.

### Manchester M.C.

Thirty competitors took part in the reliability trial for the silver challenge cup presented by Messrs. J. Blake and Co., run on the 2nd inst., over a fairly stiff course, starting from Monks Heath. The surface of Mow Cop was greasy, and several failures occurred, also some fine climbs were recorded, notably H. Jacques (7-9 Harley-Davidson sc.), E. Foster (5 Raleigh), H. Reed (8 Dot sc.), and E. P. Allbones (7-9 Rudge sc.).

### North London M.C.C.

In the form of a "find your way" competition, the captain's surprise run was held on Saturday the 1st inst. A prize awarded for this event was won by B. Staley (4 Triumph), whose time was nearest to 20 m.p.h.

This club's second "At Home" was held at Ye Olde Gate House Hotel, Highgate, on the following Monday. Considering the weather, there was a very good attendance, and a most enjoyable evening was spent. It has been decided to hold these gatherings on the first Monday of each month throughout the year, and all motor cyclists will receive a hearty welcome.

The hon. secretary is Mr. Alan W. Day, "Claremont," Ballards Lane, Finchley London, N.3.

### Leinster M.C.C.

The club held an open hill-climb recently at Kilinarin Hill. The afternoon was bitterly cold, and snow fell at intervals, but nevertheless a good number of competitors turned out and an interesting afternoon's sport was witnessed. The handicapping was very skilfully done, and in most of the classes the men were brought nicely together.

| | Handicap Time. Secs. |
|---|---|
| TWO-STROKES UNDER 350 C.C. | |
| 1 R. Humphreys (2¼ Velocette), 2 secs..... | 39⅔ |
| 2. T. F. Slevin (2¼ Velocette), scr. ..... | 43⅓ |
| 3. J. Gilmour (2½ Omega), 5 secs..... | 77⅓ |
| FOUR-STROKES UP TO 350 C.C. | |
| 1. H. J. McInally (2¼ New Imperial), 2 secs. | 31⅔ |
| 2. J. G Burney (2¾ Douglas), 8 secs. ..... | 33 |
| 3. J. A. H. Waters (2¾ A.J.S.), scr. ..... | 33⅓ |
| ALL TYPES UP TO 600 C.C. | |
| 1. A. A. Wayte (3½ Sunbeam), 1 sec. ..... | 26⅔ |
| 2. C. S. Maguire (4½ Humber), 4 secs. ..... | 27 |
| 3. J. Alexander (3½ Sunbeam), 2 secs. ..... | 27⅓ |
| SIDECARS UP TO 1,000 C.C | |
| 1. P. A. Bell (7 James sc.). 4 secs. ..... | 38 |
| 2. S. J. Redmond (7-9 Indian Chief sc.), scr | 40 |
| 3. J. Healy (4½ James sc.). 8 secs. ..... | 41⅓ |

## Times to Light Lamps.

| | | |
|---|---|---|
| April 13th | .. .. | 8.50 p.m. |
| „ 15th | .. .. | 8.53 „ |
| „ 17th | .. .. | 8.57 „ |
| „ 19th | .. .. | 8.59 „ |

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### Surbiton Inter-Club Team Trial.

Entries for this year's inter-club Team Trial for the Maude's Challenge Trophy, to be held on the 22nd inst., close on Saturday next.

### Rear Lights for All.

In the Report on the Regulation of Road Vehicles (see p. 473) attention is drawn to the first interim report of the Committee on Lights on Vehicles (1920), which recommends that a red rear light should be carried at night by all vehicles.

### Qualification for Driving Licences.

It is generally known that driving licences may be issued to any member of the public, no matter whether he be insane, halt, maimed, or blind. The authorities are against a medical examination for fitness for intended drivers, but recommend that every applicant should make the following declaration: "I hereby declare that to the best of my knowledge I am not suffering from any disease or physical disability which would be likely to cause the driving of a mechanically-propelled vehicle by me to be a source of danger to the public."

### 100 m.p.h. in Natal?

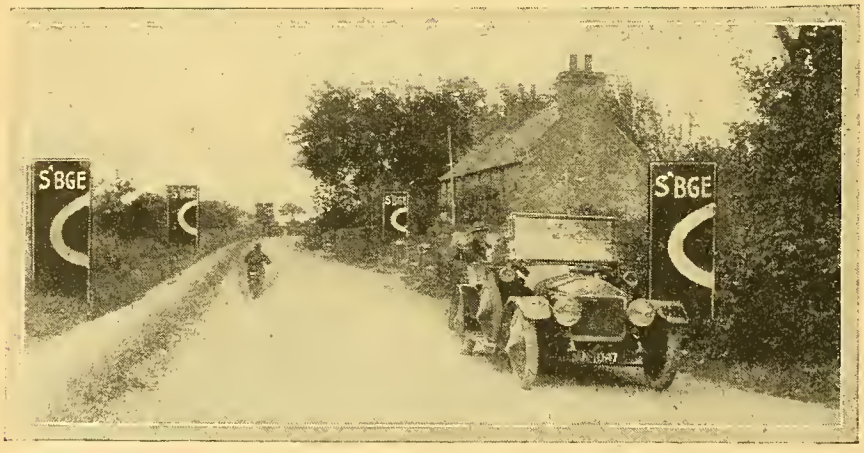
R. Blackburn, acknowledged to be S. Africa's champion heavyweight rider, will very shortly be seen in Natal competitions with a new racing Harley-Davidson, which has just been unpacked. The new machine is of the eight-valve track type, and is certified as having accomplished the speed of 112 m.p.h. in America.

### The Snowbound West.

The blizzard which heralded April in the West Country effectively put many well-known beauty spots "off the map" for the time being. Cheddar Gorge, particularly the top, was quite impassable for vehicles even on Sunday and Monday of last week, drifts being well over head level in some parts. Access to Cheddar village was only possible by a roundabout route.

### London-Holyhead-London Trial.

On Friday and Saturday (21st-22nd inst.) the Ealing and District M.C.C. will hold its annual twenty-four-hour run to Holyhead, open this year to any club in the South-eastern Centre A.C.U. The premier award is the Maude's Challenge Shield, to be held for one year. Entries are coming in at a very satisfactory rate, and it is expected that last year's record will easily be beaten. First post tomorrow morning is the last date upon which entries will be received, further particulars being obtainable from the organising secretary, Mr. F. A. Longman, 17, Bond Street, Ealing, London, W.5.



DANGER AHEAD. Instead of banners, which were always liable to fall on the road in front of 60 m.p.h. riders, sets of notice boards, as shown, each 8ft. high, will be used this year as warnings of the proximity of dangerous bends on the T.T. course.

## Special Features.

AUSTRALIAN SIX DAYS.
FIRST 1922 BROOKLANDS MEETING.
GUIDE TO EASTER TRIALS.

### Peggy Fraser on the Screen.

Miss Peggy Fraser, the fashion artist whose dress designs for lady motor cyclists are familiar to our readers, is now "featuring" in a screen interview in the "Around the Town" series of topical films. She is the first dress artist to be screened.

### Big Easter Monday Hill Climb.

Such well-known riders as George Dance, G. S. Boston, F. W. Dixon, R. T. Cawthorne, and E. Searle are competing in the Staxton Brow hill-climb on Easter Monday, and since the hill is in perfect condition it is expected that all records will be broken.

### "Rough, Heart-breaking Stuff."

It has now been practically decided to give premier awards in each of the eleven classes in the Yorkshire Centre colonial trial in June. The course, which will centre upon Harrogate, is of 70 miles, and will be covered twice. Though there will be no such freak hills as Park Rash, "all the course," according to Mr. J. N. Longfield, "except for nine or ten miles, will be absolutely rough, heart-breaking stuff—the sort of thing that we Yorkshire riders appreciate." Marks will be given for the condition of the machines.

### At Brooklands next Month.

Among the principal attractions of the next meeting of the B.M.C.R.C., to be held on May 6th, are three races for motor bicycles conforming more or less to Tourist Trophy requirements. Of these events two will be run together (250 c.c. and 350 c.c. machines), while the third race will be for motor cycles which conform to the Senior T.T. conditions. The smaller machines will cover 26 laps, and those in the senior class 30 laps. It has been estimated that the time occupied will be 1½ hours for each race, it having been considered that the lightweights should travel at 45 m.p.h., the junior machines at 50 m.p.h., and the senior machines at 60 m.p.h. Other events will be the five-lap All-Comers passenger machine handicap, and a three-lap scratch race for motor bicycles up to 1,000 c.c. It has been decided by the B.M.C.R.C. that members who enter for a race and do not start will lose 10 marks in their scoring for the aggregate cup presented at the end of the year.

### Liability of a Dog.

Two hundred and fifteen pounds damages were recently awarded a Scottish motor cyclist, who sued the owner of a dog which had attacked him on the road and caused a bad spill.

### Attempting Records in Italy.

P. S. Vailati, the Italian champion for the 500 c.c. class on a Sunbeam, is attempting the flying kilometre (world's record) on a machine of the same make. It is rumoured that the machine in question is the one on which Dance obtained such marvellous speeds last year.

### Road Racing in France.

To form the first eliminating trial of the French international motor cycle championship, a minor Grand Prix race will be held at Lyon on May 21st. It is claimed that the roads on the circuit, St. Andre-De Corcy, will be improved, even if at considerable expense.

### An Historical Retrospect.

The earliest recognition by Parliament of the use of mechanically-propelled road vehicles was in 1831, when a Select Committee of the House of Commons was appointed to inquire into the tolls imposed on coaches and other vehicles propelled by steam or gas on common roads.

### Road Patrols During the Lunch Hour.

Hitherto the A.A. road patrols have left their beats for their midday meal at various times between 12 and 2 p.m. To enable members, however, to know precisely when they may rely upon receiving midday road assistance, it has been arranged that all patrols take their meal-time from 1 to 2 p.m.

AT BROOKLANDS LAST SATURDAY.
A notable win was scored by G. H. Williams (348 Sheffield-Henderson) in the private owner's race. His speed was 63·69 m.p.h.

### Entries for the Amateur Road Race.

Should A.C.U. sanction be obtained for the I.O.M. Amateur Road Race, referred to in *The Motor Cycle* last week, entries will probably close on May 15th.

### Manchester Trades Dance.

A dance in aid of the Manchester Centre Cycle Trades Benevolent Fund was recently held at the Assembly Rooms, Cheetham Hill, Manchester, at which 200 local traders were present.

### British Racing Success in Italy.

Three o.h.v. 3½ h.p. Triumphs practically swept the board in the 500 c.c. class of the Italian *Circuite di Brescia*, finishing first, second, and fifth, making the fastest lap of the day, and winning the team prize.

### Golf Competition for Traders.

On May 1st a golf competition (at Redditch Vale Golf Club) is to be organised by the Manchester Centre of the Cycle and Motor Cycle Trades Benevolent Fund, open to all members of the centre. This event is to be followed by a dinner and a concert. Entries close to-morrow and should be forwarded to Mr. F. Webster, 28, King Street, West Manchester.

### Motor Cyclist's Conviction Quashed.

An important precedent has been established by the Lord Chief Justice and Justices Sherman and Salter, who quashed a conviction against a motor cyclist because it could not be proved that he was the driver. The case was that of a motor cyclist who was summoned for riding to the common danger. He could not be identified, but the registration number of the machine was taken, and he, as the owner, was summoned. Although he could not be definitely identified as the driver the magistrates decided that he was, and fined him. The motor cyclist appealed, with the above result.

# SOME ROADS TO BE AVOIDED.

## Holiday Routes which are in Indifferent Condition.

ALTHOUGH it is not possible to avoid travelling over some of the roads mentioned in the list below if extensive journeys are made, to be forewarned is to be forearmed, and motor cyclists should, as far as possible, take heed of the warning which the Automobile Association gives with relation to the condition of the stretches enumerated.

### Home Counties (North).

London to Romford.
Billericay to Southend.
London to Epping.
North and South of Alconbury (Great North Road).
Stony Stratford and Fenny Stratford.
Oxford Road.
London to Uxbridge.
Beaconsfield to Stokenchurch.
Bath Road; Colnbrook to Maidenhead.

### Home Counties (South).

Hastings Road south of Bromley and between Sevenoaks and Tonbridge.
Eastbourne Road; between East Grinstead and Maresfield and south of Hailsham.
Brighton Road; north of Crawley.
Worthing Road; between Dorking and Warnham.
Portsmouth Road; near Petersfield.
Southampton Road; on the London side of Farnham and halfway between Winchester and Southampton.
Exeter Road; between Hartley Row and Basingstoke.
Bath Road; west of Hungerford.

### Midland Counties.

The Fosseway; Leicester to Six Hills.
Leicester to Ashby.
Oundle to Peterborough.
Derby to Ripley.
Wolverhampton to Whitchurch.
Alcester and Stratford-on-Avon.
Stonebridge and Kenilworth.
Watling Street (Wellington-Daventry) between Prior's Lee and St. George's, also between Fazeley and Wilnecote, Churchover and Dunsmore.
Lichfield to Walsall.
Lichfield to Coventry.
Rugby to Coventry.
Nuneaton and Hinckley.

### Western Counties.

Exeter to Plymouth.
Brent to Wrangaton.
Exeter to Barnstaple; bad after Lapford.
Exeter to Torquay.
Kingsteignton to Newton Abbot.
Exeter to Minehead.
Tiverton to Bampton.
Exe Bridge and Dunster.
Newton Abbot to Kingsbridge; bad in places.
Princetown to Exeter; bad, to Moretonhampstead.
Barnstaple to Ilfracombe; bad via Braunton.
Lynton to Simonsbath and South Molton.
Dartmouth to Modbury.
Bath to Wells; bad to Newton St. Loo.
Taunton to Minehead.

### North-Eastern Counties.

York to Bridlington; poor after Driffield.
York to Hull; between Barnby Moor and Market Weighton.
Hull to Withernsea via Patrington.
Selby to Market Weighton.
Leeds-Otley-Pontefract.
Great North Road; from seven miles from Doncaster to Aberford.
Doncaster to Wakefield; full width repairs 5½ miles from Wakefield.
Bradford to Wakefield.
Great North Road; between Colsterworth and Stretton.
Boston to Spalding.
Scunthorpe to Thorn.
Spilsby to Horncastle.
Horncastle to Wragby.
Lincoln to Grimsby via Market Rasen.

### North-Western Counties.

South of Kendal and between Kendal and Shap.
Kendal and Kirkby Lonsdale.
Sedbergh to Lancaster.
Gisburn to Nelson.
South of Preston on both roads to Bolton.
Matlock and Derby.
Derby to Ashbourne.
Chester to Flint, and northwards.
Pentre Voelas to Corwen.
Dolgelly to Festiniog, Barmouth, and Machynlleth.

### South Wales.

Clun to Newtown.
Llanidloes to Newtown.
Cardigan to Aberayron.
Haverfordwest to Begelly.
Carmarthen to Swansea.
Cardiff to Penarth.
Merthyr Tydfil to Abergavenny.

### Eastern Counties.

Norwich to Saxmundham.
Beccles to Lowestoft.
Norwich to Great Yarmouth.
Norwich to Cromer.
Holbeach to Spalding.
Peterborough to Oundle.
Colchester to Sudbury } both bad halfway.
Colchester to Halstead }
Chelmsford to Rayleigh.

# FIRST 1922 BROOKLANDS MEET.

## Wonderful Speeds by 350 c.c. and 250 c.c. Machines. Sunbeam and Sheffield Henderson Records.

C. F. Temple (988 Harley-Davidson sidecar) leading, H. Le Vack (980 Zenith sidecar) in a stiff struggle for a place in the sidecar handicap.

IT is only to be expected that the first Brooklands meeting of the year should provide an uncertain hour or two for competitors, backers and bookmakers alike, and last Saturday's affair was no exception to the rule.

The presence of George Dance with a couple of new super-track o.h.v. Sunbeams, looking very businesslike, despite their glittering finish, gave the hero-worshipping element in the crowd something tangible to follow, and compensated for the fact that neither O'Donovan nor Judd nor the o.h.v. Norton were racing.

Taken on the whole, the racing was interesting and easy to follow; all the events consisted of three laps, starting and finishing at the fork: and it is difficult to imagine any further changes in organisation or arrangement which would make the meeting more exciting as a spectacle. It is a pity, however, that motor cyclists cannot be handicapped in the manner horses are, *i.e.*, by carrying weight, or by some other method which would ensure a simultaneous start and a close finish.

Again, scratch races are become rather farcical when the limit men are well beaten by the back markers in previous handicap events over the same distance.

### Scratch Man Wins.

Fourteen riders faced the starter in the first event. Dance gave from 45 seconds up to 2 minutes 24 seconds to the rest, but hurtled through the field at nearly 80 m.p.h., catching up W. D. Marchant (248 Sheffield-Henderson) just as they came into view a few hundred yards from the finish on the last lap. Marchant himself rode a fine race and was considerably faster than any of the 350 c.c. machines against which he competed; E. J. Anderson (249 New Imperial) was the only other to look dangerous, but he was troubled with mis-firing at half distance.

EVENT 1.—(350 C.C. SOLO 3 LAP HANDICAP).
1. G. Dance (349 Sunbeam), scratch.
2. W. D. Marchant (249 Sheffield-Henderson), 1m. 36s.
3. J. Woodhouse (349 Martin-Jap), 1m. 48s.

Winner's speed, 78.90 m.p.h.

During this race Dance and Marchant broke records as under:—

CLASS B (350 C.C.): 5 MILES.—G. Dance (349 Sunbeam), 3m. 43.56s.=80.51 m.p.h. (Previously held by H. R. Davies (349 A.J.S.) at 74.40 m.p.h.)

CLASS A (250 C.C.): 5 MILES.—W. D Marchant (249 Sheffield-Henderson), 4m. 34.63s.= 65.82 m.p.h. (Previously held by R. N. Judd (249 Velocette) at 65.61 m.p.h.)

History looked like repeating itself in the 500 c.c. handicap, which attracted seventeen starters, including Dance (498 Sunbeam), J. Emerson (499 Douglas), F. B. Halford (499 Triumph), and C. P. Wood (486 Scott), but Dance broke a connecting rod and the remaining three were unable to overtake the limit men, headed by W. H. Sinnett (490 Norton), who won comfortably.

EVENT 2.—(500 C.C. SOLO 3 LAP HANDICAP).
1. W. H. Sinnett (490 Norton), 1m. 45s.
2. Guy James (490 Norton), 1m. 48s.
3. G. Maund (398 A.B.C.), 1m. 27s.

Winner's speed, 69.98 m.p.h.

Mr. Ebblewhite despatching two of the limit men in the 600-1,000 c.c. passenger event.

### Triangular Contest.

Although there were only seven starters in the 1,000 c.c. class, there was the material for a very exciting triangular contest in the matching of C. F. Temple (Harley-Davidson) against H. Le Vack (Zenith-Jap) and Kaye Don (Indian), the latter pair receiving 9 seconds from the Harley rider. The limit man, J. W. Tollady (600 Humber), kept his place first time round, followed by J. Hall (748 Trump-Jap), and then Kaye Don and Temple almost abreast, with Temple visibly gaining ground. At the end of another lap the Harley rider led the field, Le Vack, who had fought ahead considerably, being second, with Tollady gamely hanging on behind. It was not a close finish.

**First 1922 Brooklands Meet.—**

EVENT 3.—(1,000 c.c. Solo 3 Lap Handicap).
1. C. F Temple (988 Harley-Davidson), scratch.
2. H. Le Vack (980 Zenith-Jap), 9s.
3. Kaye Don (988 Indian), 9s.
Winner's speed, 90.59 m.p.h.

Out of nine entrants only one, R. Dequin (348 Ivy sc.), turned up for the following event, and he was well round on his first lap before some indignant backers persuaded C. P. Wood (486 Scott sc.) to make a race of it. As Dequin hove in sight again he was duly warned that he was not having a walk-over, but it was unnecessary, for the odds were too great against the Scott.

EVENT 4.—(600 c.c. Sidecar 3 Lap Handicap).
1. R. Dequin (348 Ivy sc.), 2m. 57s.
Speed, 45.1 m.p.h.

Big twin sidecars and cycle cars (represented by E. B. Ware's Morgan at scratch and Eric Longden's four-wheeler) were lumped together in Event 5, in which O. de Lissa's 996 c.c. Motosacoche outfit deservedly won a fine race. Temple, Ware, and Le Vack had an exciting tussle amongst themselves, and had the race gone another lap all three and the actual winner might have finished within inches of each other.

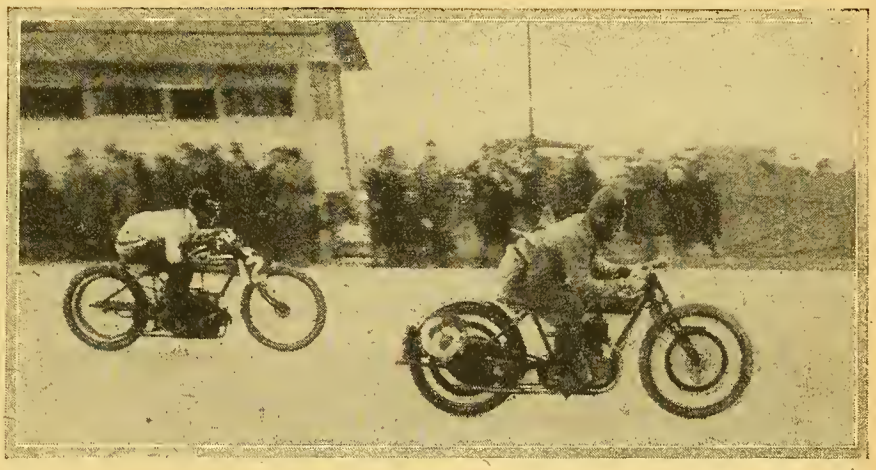
EVENT 5.—(600-1,100 c.c. Passenger Machine 3 Lap Handicap).
1. O. de Lissa (996 Motosacoche sc.), 57s.
2. C. F. Temple (988 Harley-Davidson sc.), 6s.
3. E. B. Ware (1,098 Morgan-Jap), scratch.

**Leading All the Way.**

The 350 c.c. scratch race does not deserve much comment. Dance (349 Sunbeam) had already proved that he was nearly 20 m.p.h. faster than his competitors, and it satisfied him to keep just in front of J. Woodhouse (344 Martin-Jap) and F. V. Jones (349 Coulson-Jap), this order being maintained throughout.

EVENT 6.—(350 c.c. Solo 3 Lap Scratch Race).
1. G. Dance (349 Sunbeam).
2. J. Woodhouse (344 Martin-Jap).
3. F. V. Jones (349 Coulson-Jap).
Winner's speed, 58.72 m.p.h.

Nothing daunted at his 499 c.c. mount being *hors de combat*, Dance essayed to lower the Douglas and Triumph colours in the 500 c.c. class, carried respectively by C. G. Pullin and F. B. Halford, on his 349 c.c. machine. It was a thrilling



Private-owner speedmen, S. E. Herrtage (492 Sunbeam) and G. E. Eyston (498 Zenith-Bradshaw), show the spectators what to expect from machines "just as you can buy."

struggle. Dance led from Halford and Pullin at the end of lap one; he still led, with Pullin second, at the end of lap two. He was beaten on the post by the Douglas rider in lap three (and last) by a matter of yards only. Incidentally, Pullin's winning time exactly equalled the speed at which Dance won the first event of the afternoon. While the big three were fighting it out, J. W. Tollady (Scott-Squirrel) and P. G. Kennedy (Norton) were having a little race between themselves, "won" by the latter.

EVENT 7.—(500 c.c. Solo 3 Lap Scratch Race).
1. C. G. Pullin (499 Douglas).
2. G. Dance (349 Sunbeam).
3. F. B. Halford (499 Triumph).
Winner's speed, 78.90 m.p.h.

Temple, Le Vack, and Kaye Don now met again, this time on even terms, J. W. Tollady on a Sports Humber being the only other starter. Result:

EVENT 8.—(1,000 c.c. Solo 3 Lap Scratch Race).
1. C. F. Temple (988 Harley-Davidson).
2. H. Le Vack (980 Zenith-Jap).
3. Kaye Don (998 Indian).
Winner's speed, 90.09 m.p.h.

Fifteen entered the lists for the final event, a private owners' handicap; it was the biggest field and probably the most interesting event of all. The limit man, F. V. Jones (349 Coulson-Jap) kept his lead for one lap, but A. Frazer (349 Sheffield-Henderson), Guy James (490 Norton), and C. Moser (499 Triumph) were all drawing ahead in a threatening manner. G. H. Williams (349 Sheffield - Henderson) overhauled Jones in lap two, as, in quick succession, did James and Moser, both apparently slightly faster than Williams or Frazer. Then Moser's engine seized in the final lap, leaving the race to Williams and Frazer, who just succeeded in overtaking James.

EVENT 9.—(Private Owners' 3 Lap Handicap).
1. G. H. Williams (349 Sheffield-Henderson), 1m. 33s.
2. A. Frazer (349 Sheffield-Henderson), 1m. 6s.
3. Guy James (490 Norton), 1m. 24s.
4. S. E. Herrtage (492 Sunbeam), 1m. 6s.
5. A. G. Williams (492 Sunbeam), 1m. 6s.
6. F. V. Jones (349 Coulson-Jap), 2m. 21s.
7. L. G. Cantle (977 Zenith), 18s.
Winner's speed, 63.69 m.p.h.

Several British makes were represented, including the only 600 c.c. sidecar entries; unfortunately these machines, a B.S.A. and a Sunbeam, retired on the second day. Results, with marks lost:

## SCOTTISH SIX DAYS' ROUTE.

FULLER details of the route of the Scottish Six Days' Trials are now available, which make it clear that the event is, at least, to be quite as severe as hitherto. Within one mile of the finish on the sixth day Blackford Hill is down to be climbed; competitors in the two-day autumn trial will remember this precipitous ascent in an Edinburgh park and will quake accordingly.

A skeleton of the route is appended. The start is on Monday, May 1st.

First day.—Edinburgh, Stirling, Crieff, Amulree, Kenmore, Trinafour, Dalmally, Pitlochry, Kenmore, Perth.

Second day.—Perth, Cairn o' Mount, Ballater, Rinloon, Cockbridge, Grantown.

Third day.—Grantown, Carrbridge, Farr House, Craggie, Inverness, Abriachan, Fort Augustus, Glendoe, Inverfarigaig, Grantown.

Fourth day.—Grantown, Bridge-of-Avon, Braemar, Lumsden, Cabrach, Aberdeen.

Fifth day.—Aberdeen, Laurencekirk, Forfar, Perth, Dollar, Falkirk, Edinburgh.

Sixth day.—Edinburgh, Broughton, Talla, Moffat, Tinto, Biggar, Edinburgh.

Observed hills:—

First day.—Sheriffmuir (special awards only), Amulree, Trinafour, Kenmore.

Second day.—Cairn o' Mount, Rinloon, Cockbridge.

Third day.—Abriachan, Glendoe, Inverfarigaig (special awards only).

Fourth day.—Bridge-of-Brown, Cabrach.

Sixth day.—Talla, Tinto, Blackford.

## THE TOUR DE FRANCE.

TWENTY motor cycles out of an entry of thirty-eight completed the arduous twelve-day 2,300 mile Tour de France reliability trial.

Set speeds for the various classes were arranged, the highest (24.8 m.p.h.) being for the 1,000 c.c. solo machines; marks were also deducted for the breakage of sealed parts.

# EASTER WITH THE CLUBS.

## Varied Competitive and Social Programme for the First Holiday Week-end of the Year.

EASTER is always a period of great activity among the motor cycle clubs, but seldom if ever has it attained such magnitude as this year. New clubs are being formed almost daily and old clubs are growing in strength, so it is not surprising that next week's fixture list has surpassed any previous calendar in extent and in importance.

Naturally the M.C.C. London-Land's End Trial takes precedence; particulars of the entry of 229 competitors and the route changes to include Beggar's Roost will be found on pages 474-5.

Possessing a different appeal, the Richmond Meet nevertheless arouses just as great interest in its own sphere, and, should long overdue favourable weather greet the day (Good Friday), there seems no doubt that the old Yorkshire market town will welcome more motor cyclists than ever before.

### Scotland and the Midlands.

Easter is less of a national holiday in Scotland than in England, but this year one of the biggest clubs on the other side of the Tweed is organising a two-day (Saturday and Monday) trial, which promises to receive excellent support. Oban is the Sunday resting-place, and the route has not hitherto been well traversed by numbered motor cyclists. In the Midlands two of the most important Birmingham clubs are scheduled to hold long-distance out-and-home trials. The Birmingham M.C.C. goes to Weston-super-Mare on Saturday to decide who shall hold the Sangster Cup, and, on the same day, the South Birmingham M.C.C. will start its annual run to Lynmouth, returning on Monday.

The Northern Centre A.C.U. will stage a social rally at Dungeon Ghyll on the 16th; and on Monday the Scarborough and District M.C. will hold its usual hill-climb at Staxton, open to the Yorkshire Centre.

### Other Inter-Club and Centre Events.

Many other fixtures show indications of over-reaching the importance of the usual confined club events. Inter-club meets, either speed or reliability affairs, are more popular than ever, and in some cases these joint competitions are promised the active support of many more clubs than the actual organisers. The Colchester and Bury St. Edmunds clubs combine for the purposes of a hill-climbing competition on Good Friday; the Bishop Auckland and Durham clubs for the same reason on Easter Monday, several further local bodies assisting in the latter scheme; and in the South on Friday yet another big climb, on Vigo Hill, will be staged by the various Kent organisations headed by the West Kent M.C. and the Rochester, Chatham, and District M.C. and L.C.C.

Welsh speedmen are catered for by the Porthcawl races to be held on Monday by the Neath and District M.C.

Minor trials, hill-climbs, and social runs are referred to in our fixture list in "Club News." Sufficient to say here that there is scarcely a district in Great Britain where some form of organised motor cycle event will not take place.

# T.T. NOTES AND NEWS.

Practice for the Tourist Trophy Races will extend from May 15th to 29th, the practice hours lasting from 5 a.m. to 7 a.m. daily, with the exception of the 21st and 28th.

* * * *

The mountain climb is at present rather soft, but from the gate above Windy Corner to Craig-Na-Baa will be found enormous improvements. The road has been widened very considerably and much improved, Windy Corner has been eased to a great extent, and when the work is complete Keppel Gate will be 10 feet wider.

* * * *

With regard to improved landing facilities at Douglas, it is understood that the authorities are ready and willing to erect a special crane, but are unable to obtain sanction for the expenditure from the British Treasury.

* * * *

Following a practice which has long been popular in similar events on the Continent, the machines actually competing in the T. T. Races will be on exhibition to the public after the official examination.

Considerable interest attaches to the Rudge re-entry to road racing, for their previous notable success provided them with first-class experience, and it is certain that this year's T.T. machines will not be "back numbers."

* * * *

Though the roads are not yet in good trim, the authorities are to be congratulated on the good work they are putting in. A heavy snowfall has delayed work on the mountain, but some big changes for the better will be noted.

* * * *

Four or five Nortons are already in the Island, one an o.h.v. model!

* * * *

Shall we see anything very startling in the way of design? Probably not, though there will be more new overhead valve engines, and at least one make will employ dry sump lubrication.

* * * *

With the exception of the Scott, two-strokes are not represented in the senior event; but the Scott has found quite a lot of extra speed, and the two-stroke twin may well win the race once again this year.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### DIMENSIONS OF BELT DRUM.

How does one get the measurements for a new belt rim—width, belt line, etc.?—F.M.

The belt line is the distance between the centre line of the machine (*i.e.*, centre of tyre track) and the centre line of the belt pulley. The width of the belt used, of course, determines the width of the belt drum, and the diameter will depend to some extent on the size of the back wheel: 18in. is the usual size.

### WHEN DO AUTOMATIC INLETS OPEN?

Please tell me the correct exhaust valve timing of a 2¾ h.p. Douglas (1911 model), and when the automatic inlet valve actually opens on the induction stroke.—J. McE.

In timing the engine the exhaust valve closes as the piston reaches top dead centre of the stroke; the point of its opening may then be disregarded. The actual moment of opening of the automatic inlet valve cannot be definitely stated, as it depends upon such valuable factors as the strength of the springs, the compression-tightness of the engine, and the engine speed. In timing an a.i.v. engine the inlet valves are ignored.

### PAYMENT FOR REPAIRS ESTIMATE.

(1.) Would you let me know if it is a custom in the motor repairing trade to charge for estimates submitted for repairs to their cycles? To my knowledge all estimates in building and various other trades are submitted free of charge or obligation to the client. (2) Is the owner of the cycle bound to get the cycle repaired by the firm so submitting an estimate? (3.) If the estimate submitted is unsatisfactory or exorbitant, and the machine is handed back without making any claim for payment for the estimate furnished, can the repairers claim subsequently such amount as they fancy for the estimate submitted?—M.W.H.

As it is necessary to dismantle a motor cycle, either partly or completely, before a definite estimate for many of the repairs connected with it can be given, it is quite usual for many firms to specify that a nominal charge for labour in dismantling and re-erecting will be made before the preparation of an estimate can be undertaken. If, however, no arrangement was made, there does not appear to be any claim on the part of the repairers; at the same time, we think it quite reasonable that they should demand payment for the actual work involved if the estimate was not accepted.

## Important Dates.

**Fri., April 14th—The Richmond Meet (Yorks.).**
**Fri. April 14th, and Sat., April 15th.—M.C.C. London-Land's End Run.**
**Sat., April 15th, and Monday, April 17th—Western M.C.C. (Glasgow) Two-day Trial.**
**Sat., April 22nd—N.-Eastern Centre A.C.U. Open Reliability Trial.**
**Sat., April 29th—S. Midland Centre A.C.U. Open Hill-climb.**
**Sun., April 30th, to Sun., May 7th—Paris-Pyrenees Trial.**
**Mon., May 1st, to Sat., May 6th—Scottish Six Days Reliability Trials.**
**Sat., May 6th—B.M.C.R.C. Members' Meeting at Brooklands.**
**Sat., May 13th—Northern Centre A.C.U. Open Reliability Trial.**
**Sat., May 20th—S.-Western Centre A.C.U. Open Reliability Trial.**
**Tues., May 30th—Junior Tourist Trophy Race.**
**Thurs., June 1st—Senior Tourist Trophy Race.**
**F.i., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**
**Sat., June 10th—B.M.C.R.C. Open Meeting at Brooklands.**
**Sat., June 17th—Yorkshire Centre A.C.U. Open "Colonial Trial."**
**Sat., June 17th—Ealing and Dist. M.C.C. 200 Mile Sidecar Race, Brooklands.**
**Fri., June 23rd, and Sat., June 24th—Irish Twenty-Four Hour Open Trial.**
**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**
**Sat., July 1st—East S. Wales Centre A.C.U. Open Speed Trials.**
**Wed., July 5th—Eastern Centre A.C.U. Open Speed Trials.**
**Wed., July 12th—French Grand Prix.**
**Sun., July 23rd—Belgian Grand Prix.**
**Fri., July 28th, to Mon., July 30th—Anglo-Dutch Trial in Holland.**
**Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.**
**Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.**
**Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.**
**Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.**
**Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.**
**Sat., Sept. 23rd—500 Mile Race at Brooklands.**

### RE-BALANCING A SINGLE.

Will you help me with the balance of my 4 h.p. Bradbury motor cycle? I am fitting a lighter piston and connecting rod and am puzzled about the different weights. Does it stand that if I lighten the piston and connecting rod by half that I must likewise lighten the flywheel the same, or shall I have to put the weight that I took out of the piston and connecting rod into the flywheel. I was told by a friend of mine that the latter was the right way, but I think that he is wrong.—J.S.B.

You would be approximately correct in removing half the difference in weight of the two pistons from a point in the balance weight exactly opposite to the crank pin and at exactly the same distance from the crankshaft. Of course, you must take half the total weight to be removed from each flywheel, not all of it from one side.

### LIGHTING FROM A MAGNETO.

I wish to run an electric rear light from the Thompson Bennett magneto fitted to my 3½ h.p. Sunbeam. There is a terminal fitted on the low tension side, which takes the current from the screw in the centre of the contact breaker. I have purchased an electric rear light with wiring, also a choking coil, as I understand that I shall need one. I have fitted the lamp and wired it up so that the coil bridges the wires from the magneto to the lamp, and the lamp to "earth," and I find that if the light is switched on while the engine is running, there is just a flicker of light and the engine stops. I should be much obliged if you would point out where the error lies. I think there must be some mistake in the wiring.—SUNBEAM.

Lighting from the low tension circuit of an ordinary magneto, especially when running at half engine speed, is not always successful. In all probability you will not be able to start the engine when the lamp is switched on, and the light will flicker very badly at low speeds. Your description of the wiring indicates that the choking coil is wrongly connected; insert the coil in series with the lamp, not in parallel; in other words, insert the coil in the lead between the magneto terminal and the lamp.

## READERS' REPLIES.

### BADLY WORN PISTON RINGS.

"A.L.G." might cure his trouble described under the above heading in the issue of March 30th by fitting a new spring to the release valve.—M.N.

### MOTOR CYCLES AND NERVES.

I can sympathise with "Not Yet Beaten" in his efforts to master the outfit. I had the same experience when I first attached my sidecar after riding solo for some considerable time, for I finished with the machine on the off side pavement. I think that if "Not Yet Beaten" takes his first runs dead slow and determines that the outfit *shall* run straight ahead, even when in overtaking traffic in a narrow road he gets on the camber on the wrong side of the road, he will eventually overcome that uncomfortable feeling he has experienced. — A. G. TURNER.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.*

"S.J.C." (London, N.1).—4 h.p. Dunelt sidecar.

"J.B." (Leith).—4¼ h.p. Beardmore-Precision sidecar.

"A.A." (Bucks).—7 h.p. four-cylinder F.N. sidecar: Economy tips specially.

"G.S.S." (London, W.C.)—3½ h.p. T.T. Sunbeam and 8 h.p. Brough Superior.

"E.W." (Catford). — 1916 2¾ h.p. Douglas: Speed; most suitable light sidecar.

"J.H." (Eastbourne).—7-9 h.p. o.h.i.v. Indian: Misfiring on front cylinder at low speeds.

"N.L.J." (Huddersfield). — 3½ h.p. Rudge Multi: Ease of starting, suitability of Binks carburetter.

"A.F.E.F." (Fambridge). — 4¼ h.p. B.S.A., solo and sidecar: Comparisons with other 1921-22 singles.

"F.D." (Monkseaton).—Method of preventing oil leaks from timing gear to magneto on Skootamota engine.

"A.R." (Consett).—1921 A.B.C., solo and sidecar: valve and exhaust noise; reliability of kick-starter and valves.

"K.F.C." (Norwich).—Best automatic oil pump on 7 h.p. A.J.S.: Consumption, fitting, and reliability; also most suitable plug.

"E.H." (Morecambe).—3 h.p. A.B.C., 2¾ h.p. A.J.S., and 3½ h.p. model 16h or 17c Norton: Suitability for riding to and from business.

"H.P.E." (Bedford). Most suitable carburetter and plugs on Scott; hints on slow running and equal oiling; Hood Equaliser for chains.

"G.P.W." (Aberdeen).—3½ h.p. Sports Douglas: Life of o.h.v., fitting of Showell pump, steering at speed and on grease; also Scott Squirrel, best carburetter, gearing for hilly district, oversize tyres, efficiency of cooling system.

SPARKLETS

### A Cycle Car Race in Algeria.

A telegram from Mostaganem announces that in a race organised there the first, second, and third prize winners drove G.N. cycle cars.

### Sleeve-Valve Engine's Success.

The engine used in F. J. Price's Diamond, on which he secured the Duke Cup in the Victory Trial, was a 3 h.p. Barr and Stroud.

### Motorised Invalid Tricycles.

A move has been made by the Argson Engineering Co., Ltd., from the West End to larger works at Cambridge Park, East Twickenham, Middlesex.

### For Motor Cyclist Campers.

There is no better way of spending a roving holiday than by undertaking a camping tour; equipment capable of being packed into the smallest compass is provided by the Lightweight Tent Supply Co., 70, High Holborn, London, W.C.1.

### Price of the Raleigh.

Some misapprehension has existed in regard to the price of the 2¾ h.p. Raleigh, a road test of which we described in the issue of March 30th. With two-speed gear this machine costs £68; for the three-speed model an extra £5 is charged. This was not made clear to us when the road-test specification was prepared.

### In the Western Centre "Arctic" Trial.

It is claimed that the only machines which covered the entire course, up to the lunch stop, of the Western Centre's abandoned trial in the recent snowfall, were the team of three Martinsyde sidecars, two B.S.A. sidecars, and one each New Imperial, Norton and Sunbeam sidecars, and one Sun Vitesse.

### A Stop in the Stock Trial.

A protest was entered by A. J. Stevens, Ltd., regarding the stopping of F. W. Giles (7 A.J.S. sc.) during the speed test in the A.C.U. stock machine trial. This stop, it was claimed, had nothing whatever to do with the machine, which otherwise had a clean score; the A.C.U., however, upheld the decision to withhold an award.

### Tommy Bars for Box Spanners.

More often than not the tommy bars supplied for use with box spanners are insufficiently strong, and bend when much force has to be exerted. Sir W. G. Armstrong, Whitworth & Co., Ltd., are producing four tommy bars of different sizes, made from steel of one hundred tons tensile strength, which will not bend or snap under the most severe usage. The address is Central Commercial Department, 8, Great George Street, Westminster, London, S.W.1.

### British Machine Honoured.

At the International Motor Show held in Milan a First Class Diploma and Gold Medal were awarded to a Lea-Francis machine.

### Improved Signposting.

Credit for the new signposts in the Birmingham area (one of which was recently illustrated in our pages) must be given to the Engineer's Department of the City of Birmingham, and not the Ministry of Transport.

### Flat Twin as Sidecar Hill-climbe .

It is reported that a 3½ h.p. Zenith-Bradshaw with sidecar has successfully climbed Quarry Bank, Purbold, before the committees of the Southport M.C. and the N.W. Centre, A.C.U.; the hill has never been climbed previously by a 500 c.c. sidecar.

### A Record Breaking Two-Stroke Revived

Alecto motor cycles are again to be produced, the makers being the Whitmee Engineering Co., who have retained Mr. Cashmore as manager of the motor cycle department. The address continues to be Alecto Works, 3, Grove Road, Balham, London, S.W.

### Victory Trial Echoes.

P. H. Johnson, who gained a silver medal in the Victory Trial, rode a 5-7 h.p. Coventry-Victor and not another make, as reported, while S. G. Neal (3 Neal-Dalm), against whom a stop was recorded on Abberley Hill, was baulked and allowed another attempt, which was successful.

### Catalogues Received.

Victoria Motor and Cycle Co., Ltd., Victoria Works, Dennistoun, Glasgow: A folder describing the principal patterns of Victoria motor cycles.

The Sun Cycle and Fittings Co., Ltd., Aston Brook Street, Birmingham. A folder dealing with the latest model Sun and Sun-Vitesse motor cycles.

Francis and Barnett, Ltd., Lower Ford Street, Coventry: A well got up catalogue of Francis-Barnett motor cycles, which are differentiated by types and not by initials or marks.

The East London Rubber Co., Ltd., 29-33, Great Eastern Street, London, E.C.2: Kerry motor clothing, including garments of every sort and description for everyday use and motoring, suitable for both sexes.

The Enfield Cycle Co., Ltd., Enfield Works, Redditch: Catalogue in two colours, giving particulars of the 2¼ h.p. Royal Enfield two-stroke, with and without kick-starter, and the 8 h.p. sidecar outfits.

New Imperial Cycles, Ltd., Imperial Works, Princip Street, Birmingham: The New Imperial Guide, a catalogue containing excellent sectional drawings of engine and gear box and sketches of gear box adjustments, etc.

C. Edmund & Co. (1920). Ltd., Milton Works, Milton Street, Chester; London Office, 117, Great College Street, N.W.1. A folder describing the Edmund motor cycle. This is one of the oldest machines on the market fitted with a spring suspension system for the rider.

# MISCELLANEOUS ADVERTISEMENTS.

## PRICES.

**ADVERTISEMENTS** in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable & Co. to ILIFFE & SONS Ltd., and crossed Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

## NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. *Readers who reply to Box No advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

## DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor. Carriage is to be paid by the buyer, but in the event of no sale each party pays carriage one way. The seller takes the risk of damage in transit. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6 and on all transactions over £100, ½%. All deposit matters are dealt with at Dorset House, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

## SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

# MANUFACTURERS' STOCK
# MAKINKOT BRAND
## *TO BE CLEARED.*

**Fawn double texture, interlined rubber,**

# MOTOR SUITS

**THESE suits are made of Fawn double texture cloth, interlined rubber.**

**The seams are cemented, sewn and taped, making these absolutely waterproof**

**Will stand any amount of hard wear.**

**The jackets are made double-breasted, with belts and wind cuffs.**

**The overalls are made on the trouser pattern, fastening with clips and straps, and have wind gussets in leg.**

**These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear.**

Every suit is guaranteed absolutely waterproof, and should these not meet entirely with your approval, we guarantee to return your money in full, if returned within seven days.

**SPECIAL PRICE,**

# 29/11 Carriage 1/- extra.

We have also several thousands, heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemented seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof, and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The overalls are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

**50/-** Carriage 1/- extra.

# *JUST WHAT YOU WANT!*

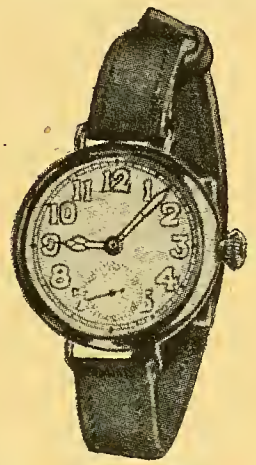
AFTER many experiments in trying to evolve an absolutely accurate time-keeper for Motor Cyclists, we now offer you the

## "LIMIT" Wrist Watch

and the

## "LIMIT" Handle Bar Watch

both the acme of perfection.



Both have luminous dials and hands of the best quality. Whilst not claiming the impossible for these watches, we back our opinion with an honest, straightforward guarantee that the variations do not exceed 10 seconds per day under any conditions, and it stands good for two years from date of purchase. It is the watch which will never let you down in appointments or in the trial runs, when accurate time is of importance. To introduce this watch we are offering it at much below usual price, and will give you a special guarantee insuring it against accidents for one year. The following are a few points of quality: Jewelled, Breguet hair-spring, interchangeable parts, nickel damaskeened movement, timed within 10 seconds per day, two years' guarantee, hard enamel dial, foolproof easy winding, prices including postage.

**Wrist Watches W.64, Nickel Case,**
**£3 : 15 : 0** Usual Price, **£4 : 18 : 0**

**W.65, Silver, H.M. Case,**
**£4 : 15 : 0** Usual Price, **£5 : 18 : 0**
**Handle Bar Watches Ditto.**

An Opportunity for Enterprising Agents.

THE MOTOR CYCLE

Insurance Policies

**IMPORTANT AGENCY EXTENSION**

SERVICE to your clients should include the best and most reliable Motor Cycle Insurance Agency it is possible to obtain.

The Policies you recommend should carry a name that inspires confidence and gives an assurance of prompt and generous settlement of claims.

From your own point of view it is desirable that you should represent a company that enjoys the highest reputation among the motoring public, and be able to offer policies that are known to give complete and comprehensive cover.

**An extension of the Agency and Service arrangements for "The Motor Cycle" policies is now being made, and applications are invited from agents who realise the value of specialised experience and the importance of maintaining the goodwill of their clients.**

Here is your opportunity of handling policies that every motor cyclist knows and the value of which he fully appreciates.

24, Emsworth Road, Shirley, Southampton.
*Feb.* 25, 1922.

Messrs. The South-Western Appliance Co., S.W. 6.

Dear Sirs,—The Delholme Motor House arrived safely on Monday last, and I have erected it to-day. I am very satisfied with it. The workmanship and materials are excellent. I thank you for dispatching so promptly; too promptly, in fact, as I had allowed a week for possible delays on rail. Notwithstanding the fact that it has been lying out in the heavy rains for 5 days, I had no difficulty in erecting it, the timber having apparently not swollen. Many thanks.

Yours faithfully, W. R. WILLIAMS.

St. James's Palace, S.W. 1.
*March* 28.

Dear Sirs,—Lady Helena Gleichen will be glad to receive the 16×15 Motor Car House as soon as possible.

11, Elm Terrace, Cockton Hill, Bishop Auckland.
*March* 25, 1922.

Dear Sirs,—I beg to acknowledge receipt of complete shed, which, since erected, has been admired by many friends.

Thanking you for your prompt attention,
Yours faithfully, Mr. T. W. LUMLEY.

# Motor Cycling in Car Comfort

The vibrationless and smooth gliding motion of a motor cycle fitted with The Brampton Bi-Flex Spring Fork is comparable to that of a well-sprung Car.

You cannot appreciate how luxuriously comfortable motor-cycling can be made until you have ridden a machine fitted with the Brampton Bi-Flex. The exclusive dual action of The Brampton Bi-Flex Spring Fork, in conjunction with the successful combination and arrangement of coil springs—acting in compression—is instantly reponsive to, and completely absorbs within itself, all vibration and road shocks from every angle at which resistance is encountered, rendering the rider immune from discomforts which are otherwise impossible to entirely eliminate. Choose a motor cycle fitted with The Brampton Bi-Flex Spring Fork or let us send you a measurement form and descriptive Booklet illustrating models for machines from 2¼ h.p. upwards.

SIDECAR.—Have a Hopley folding sidecar. Saves garage worry and expense. Attached to motor will go through passage 28in. Tandem and single bodies fitted.—Hopley.

FOLDING Sidecar.—When ordering your motor specify a Hopley folder. Suits motors up to 10h.p. Can be changed from pleasure to commercial in few seconds. Detachable wheels can be fitted. Tested 7 years.—Hopley, Upper Highgate St., Birmingham. [0152

LIGHT Coachbuilt Sidecar, Easting, luggage grid, tool box, lamp, re-enamelled B.S.A. green, 26×2½ wheel, new tyre; £17.—13, Searles Rd., New Kent Rd., S.E.1. [1311

COMFY Sidecars, strong underslung chassis, coachbuilt body, bulbous back with locker, quick detachable fittings, Clincher tyre; price 18 gns.—Comfy Sidecar Co., Leytonstone. [3079

SPORTING Canoelet Sidecar, complete, nearly new, 4 points, Lucas lamp set, waterproof apron, plated adjustable windscreen, photo; £14/10; delivered free first 50 miles.—E. Pledger, Ely. [7477

ROVER Coachbuilt Sidecar, £12; Rudge coachbuilt, £12/10; both lovely condition, complete, ready for machine; coachbuilt sidecar, £6.—Syd. Pearson, Gate House, Cheylesmore, Coventry. 'Phone: 1639. [9759

WILLOWBROOK Royal Leicester Sidecars, smartest designs, first-class finish; prices from 17 gns. Write for catalogue. Repairs undertaken, hoods, wind screens, etc.—The Willowbrook Motor Co., Leicester. [0335

PARAGON (patent) Folding Sidecar saves storage, has 7 years to its credit, and has proved itself obsolutely reliable. Fits any make of motor cycle, and, when folded, combination will pass through a 30in. doorway. Call and see it demonstrated.—Wincycle Co., Ltd., 236, High Holborn, W.C.1 [0388

HAVE You Seen the Latest in Sidecars (Brookes' Patent)? An open or closed sidecar in 60 seconds, guaranteed protection; from 45 gns., complete with chassis (no leather or canvas hood).—Particulars from Patentees and Designers, Brookes-Harris, Bishop St., Wolverhampton. [1173

OLD Man Hep. has 1,000 Douglas Underslung Chassis, complete and renovated, to suit all makes of machines to order, £5 each. We can supply a brand new bulbous-backed Douglas type body and new tyre for £6/10 extra. The body requires a finishing coat of paint only, upholstered in rexine.—17-19, Wilcox Rd., South Lambeth, London, S.W.8. 'Phone: 1958 Brixton. [1284

LIGHT Car and Motor Cycle Engineering Co., Ltd. —Light touring complete, £12/12. Medium touring complete, £15/15. Heavy touring complete, £21. Second-hand touring sidecar, suit 8h.p. machine, complete with lamp, £5. Second-hand body, dark green, in very good condition, fitted to brand new chassis, £12.—26, Tulse Hill, Brixton (½ minute from Brixton Skating Ring). 'Phone: Brixton 1292. [1196

GREAT Bargains for Easter.—20 1922 new underslung chassis, complete with new bulbous back body, £18/10; 20 1922 lightweights, complete, all brand new, £11/10; P. and M. outfits, complete, from £12/10; Douglas outfits, complete, from £14. Wonderful bargains; we are the actual manufacturers. Extended payments.—Robini Manufacturing Co., 1 and 3, Tulse Hill, Effra Rd., Brixton, S.W.2. 'Phone: Brixton 1585. [1177

## RUNABOUTS AND CYCLE CARS.

## Spare Part Prices.

ALTHOUGH motor cycle prices have fallen appreciably during the past six months there has been no general tendency to reduce the price of replacement parts for current models. Old standing spares must perhaps naturally retain their original value.

In these days, when the front rank machines are almost of equal quality, and when performances and reliability are on a general level of excellence, the prospective buyer is apt to look towards some of the more extraneous characteristics of a machine for deciding factors in his final choice. Obviously if a rider wavers between two machines of very similar specification and capabilities, and he learns that the service given by the makers of the one is better, or the spares cheaper, than the other, his selection is bound to be influenced by the consideration of the fact.

Manufacturers in this country have never looked upon the spares side of their businesses in the same way as, for example, the producers of cheap cars in America. In some directions the car is sold at a small profit, and a great part of the value of the sale lies in the potentiality of the car as consumer of spare parts. Motor cycle manufacturers tend to regard the supply of spares as a necessary evil, and although they may produce copiously illustrated spares lists, they frequently give the impression that the sale of parts is a burden on their energies and resources, which can only be carried by the imposition of exceedingly high prices for the individual components of their machines.

This should not be so; any firm producing machines which are not needlessly changed in design from year to year, should be able to run its spares service department as a profitable trading concern, without demanding fictitiously high prices. One large concern has already made a step in this direction, and others must follow; as motor cycle design crystallises into hard and fast lines (a slow process, truly!) this extraneous matter of prompt and cheap spares supply will have more and more weight in the guidance of the public's choice.

---

## On Treacherous Surfaces.

STRANGE subjects crop up in our Correspondence columns, but there is possibly some method in the seeming madness of the query, "On which side do you fall?" It is suggested that when a solo machine upsets it eventually lands on the side from which the rider usually mounts.

But it would be more useful to obtain exact information as to the correct riding procedure in various situations which require careful negotiation to maintain an upright path. One well-known track rider, for instance, recommends that the handle-bars should be released entirely on the first symptoms of speed-wobble, asserting that the machine will then right itself; another rider advises a similar cure for an incipient skid caused by reaching a loose, uneven patch of road at too great a speed for safety—in effect, he says that bars should be held loosely; but a third fairly common hint is to speed up and grip tight on really bad grease.

There is really no reason why all this seemingly contradictory advice should not be correct under different circumstances; but to the ordinary rider the only tangible fact is that he begins to wobble or skid on a treacherous surface long before the trials riding expert, who may not skid at all, and he is more interested in why this should be so than on which side he will eventually fall.

An index to the advertisements in this issue will be found on Supplement ii.

By IXION.

## For Kerridge Folk.

OFTEN I have emphasised the growing, if somewhat inarticulate, demand for a utility motor cycle amongst people of limited means, devoid of technical knowledge, who merely desire cheap transport, and have no intention of ever growing interested in the technical or sporting aspects of motor cycling. This demand has become so keen of late that its victims are taking the initiative, and spontaneously hunt up machines which appeal to them, though clubmen know little about the designs and possibly care less. Within the last few weeks I have received quite a number of letters from people of distinct social standing referring to such machines as the Hack, the Reynolds, and the Xtra-car. How many of my readers could state the approximate specification of this trio offhand? The "gentry" are taking trial runs on these cheap and unconventional vehicles, and seem to be mightily tickled with them.

## A Moody Engine.

THE latest brain-twister in our out-patient department is purveyed by a reader who owns a Rudge. It is a machine with a past—a highly creditable past, too; but just lately it has developed a very curious trick. In the ordinary way it "rudges it" like any other Rudge. Every now and then, usually, though not invariably, when climbing a mild grade with the multi lever a notch or two backwards the engine suddenly begins to "super-rudge it," or behave like Cyril Pullin's 1914 bike of that ilk. In a hundred yards or so it returns to its normal self. The four-cylinder F.N. was often accused in old days of occasionally turning "fey," as the Scots call it, and developing about double its normal h.p. for a few moments. But I have not previously heard of the Rudge exhibiting a mad minute. Can any rudger account for the symptoms? The owner has been over the carburetter with a fine tooth comb to no purpose. That's the worst of these pedigree animals—they turn skittish when they're full of oats.

## Big Tyres and the Right Fork.

I HAVE tried big tyres and the wrong fork, little tyres and the right fork, and latterly big tyres and the right fork, as exemplified by two conjunctions, namely the Scott fork plus 3in. Palmer cords, and the Druid fork plus 3in. Dunlop magnums (or should it be "magna"?). We all know that big tyres spell a vast increase of comfort, and eke that the fork is really far more important than the engine. But I fancy there are lots of riders who have never sampled a first class fork in conjunction with a big tyre, blown rather sloppy. I frankly admit that on modern roads with a grade B fork and 2⅝in. tyres motor cycling can be a most exhausting pastime. More than once last year I rode upwards of 200 miles in the day, and when night came I felt as I never wished to do it again. I was never quite sure whether post-war roads or sheer Anno Domini were really responsible for the envious glances (horrible confession) which I occasionally cast at parties in big cars towards the 199th mile. But *this* year the various road strains, whether due to potholes or freak hill surfaces or speed or distance or perennial corners or grease, leave me as fresh as the proverbial daisy after 200 miles. I have not got a spring frame, and I really don't feel the need of one.

## Beggars' Roost.

THIS famous hill will obviously be a centre of public interest at Easter. The most humorous episode I ever witnessed on it was as follows: Jones, who sought to paralyse the market by producing the perfect cycle car, was with difficulty convinced that your sporting motor cyclist does not regard Dashwood and Stoneleigh as worthy the name of hills, and a friend of mine took Jones, complete with cycle car, down West to look at some real gradient. Porlock was found to be dry, and the Jonesette scrambled up after all superfluous kit had been dumped at the Ship Inn. Countisbury burnt out the brakes, and Lynmouth was negotiated slowly but surely at the tail of a cart with

**Occasional Comments.—**

the aid of a stout chain. Jones insisted on tackling the Roost, and my pal very laudably refused to assist otherwise than by taking a photograph. The Jonesette stuck as soon as its nose touched the 3 in 10 piece. Its brakes wouldn't hold backwards, so Jones was fain to turn it round before he descended. He got the car broadside on across the gradient, and it promptly turned over down the hill. I wish truth allowed to add that it rolled to the bottom; but, alas! the Jonesette was not sufficiently sturdy in construction for that. Its side squashed in like a sat-upon topper at the first capsize.

### The 1922 Sports Bus.

My motor cycling memory is as long as most, but I do not recall any year in which engines and frames have made so much progress as in 1921-2. The current sports bus is a direct incentive to average nearer 40 m.p.h. than 30 m.p.h. I do not mean that it will not trickle along at a speed which auntie would approve, but 40 m.p.h. is its natural minimum when the road is straight and clear, and what's more, its steering, its brakes, and its comfort all tempt the ordinary owner to keep up that sort of pace. There is actually nothing dangerous or reckless about it, so smooth and controllable are the latest editions. As a motor cyclist I appreciate this luxurious travel enormously; but as John Citizen I rather wonder that so few makers have utilised the recent advances in design to give us lighter, cheaper, and more economical solo buses. Every machine has a natural speed at which it runs its best without forcing and without being held back. For my own 1922 solo roadster that speed is 42 m.p.h. on standard gear, and the machine weighs 2½ cwt., all on. My surprise is expressed at the fact that the people who build this bus do not flank it in their list with a little sister, weighing, say, 180lb., and giving the sort of performance which we expected from a standard 3½ h.p. in 1914.

### Four-cylinder Sidecars.

In a review of a hush-hush four-cylinder project now on the carpet, I estimated that such an outfit might be produced at round about £175. Mr. H G. Bell, of the F.N. Co., points out that his firm's super o.h.v. 8 h.p. outfit-de-luxe is listed at £174. A bright guess on my part, for I had no notion of the F.N. price when I penned my paragraph. But Mr. Bell certainly offers astounding value in the shape of the 7 h.p. F.N. sidecar, which is actually listed at £127—less than I have paid for a solo single-cylinder in this year of grace. Makes me wonder how our exchange stands with Belgium; having no charitable relations in that country, I don't happen to be *au fait* with their money market.

A TYPICAL ENGLISH LANDSCAPE. Trials have now started in earnest, competitors' numbered machines being a familiar sight at week ends both on the highways and in the byways: the solo and sidecar riders, too, are thronging the roads in greater numbers, some attached to clubs, others preferring to follow their own inclinations. The scene is at the bottom of Birdlip, Gloucestershire.

# Exploring the Hebrides.

## A TRIP TO THE LONG ISLAND —A LITTLE KNOWN PART OF THE BRITISH ISLES

One of the curiously shaped chambered cairns known as Langass Barp, North Uist island.

The Norton outfit on a rocky track in the Island of Harris.

IN recent issues of *The Motor Cycle* contributors have described motor cycling conditions in the outlying parts of the United Kingdom. The Channel Isles, the Isle of Wight, the Isle of Skye, and the Isle of Man have all received their meed of praise. There is another distant fragment of the British Isles of which few know little about, *i.e.*, the Hebrides. Take a map and locate these islands, and you then realise that there are many districts—each with a charm of its own—which might be worth "discovering."

The writer, last summer, visited the Hebrides on a Norton sidecar, and the trip proved most interesting.

### The Western Islands.

On reaching Kyle of Lochalsh one feels instinctively that the Western Isles have already been reached. Kyle, indeed, is different from all other Highland towns; it is, as it were, the clearing house for the Hebrides. There, less than a mile across the sound, is Skye, where a white line of cottages stands out plainly marking the village of Kyleakin and, looking straight down the Kyles, the Cuchullins tower above the water.

But we were bound for the Long Island and, having arrived at Kyle late in the afternoon, we thought it advisable to see the Norton safely aboard the Stornoway boat, that vessel having apparently no very fixed time for weighing anchor.

### Applecross from the Sea.

About an hour's run from Kyle we were interested to see the ferry-boat come out from Applecross to take the mails off the steamer, for now the Highland postman no longer toils over the long "Pass of the Cattle," so familiar by name to all motor cyclists, to reach the village from the land side.

We arrived in Stornoway harbour about eleven o'clock, just as the sun was setting behind the island. The sea passage had been most enjoyable, the Kyles and the Minch really presenting a magnificent spectacle during fine weather.

Our plans were first of all to explore Lewis as far as possible, then to run down and look at Harris and, afterwards, to take the boat from Tarbert down the Little Minch and past the Sound of Harris to Lochmaddy in North Uist.

With the aid of the map we located the places of interest and set out on our trusty mount in quest of them. Much of the interest in Lewis lies in its prehistoric monuments. At Callernish we found a fine example of the Druidical circle; at Morsgail are two well-preserved specimens of all-stone bee-hive huts, known locally as the "bee-bothies"; at Carloway is an old round stone hill-fort, known as the "Dun Dearg" (red fort), which is one of the best preserved specimens of this type of structure still extant. At Uig there remains an old cave dwelling.

### A Land without Trees.

Besides these features the scenery in Lewis is not at all uninteresting. There is the Rocky Butt of Lewis, which well repays a visit. Perhaps the most striking feature is the almost absolute lack of trees. There are indeed trees in the castle grounds at Stornoway, planted by Major Matheson, Lord Leverhulme's predecessor, but even amongst these the winds have played awful havoc.

Lewis on the whole is flattish, one vast moorland, besprinkled everywhere with little lochans. The roads are what one would expect in such an outlying part. They are none too good, and are in many parts grass-grown and rutted, with a rough, stony surface.

The houses in Lewis are certainly unique. The walls consist of two walls of dry stone building between which is packed earth to keep out the wind. The framework of the roof is put up in wood, presumably imported or "scrounged" from somewhere, and over this a layer of turf is placed. Grass and heather are then heaped on over the turf and held in place by ropes and old fishing nets weighted down with stones.

Between Stornoway and Tarbert the road led us over the mountains which mark the border line between

**Exploring the Hebrides—**

Lewis and Harris. The road over Ben Clisham is long and has many patches where the gradient furnishes a searching test for the engine, and one hair-pin bend, marking the commencement of the really stiff part of the hill, is quite sufficient to tax the capabilities of any amateur rider.

Some three miles out of Tarbert we passed a disused whaling station at Bunamhuinneader, which we understood would be working again during next season.

Tarbert is a nice little "town," supplied with a fine hotel and situated on a narrow isthmus some few hundred yards across, separating the East Loch from the West Loch, and incidentally forming the boundary between North and South Harris.

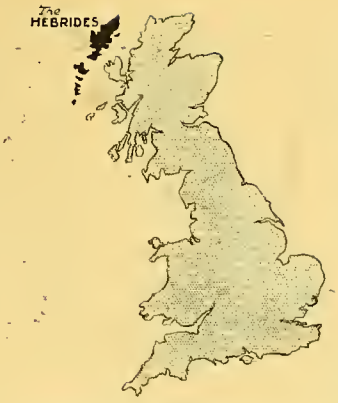
From Tarbert we ran the machine down to the extreme end of the island to a place now known as Leverburgh, the old name Obbe having fallen a recent victim on the altar of commercialism.

The scenery in Harris is totally different from that in Lewis; the difference might possibly be summed up in the words "peat" and "rock." Harris is rocky in the extreme, and the panorama for sheer wilderness and desolation must want some equalling in the British Isles. The road is one continual switchback of ups and downs, and possesses a "Devil's Elbow" all of its own and surely not unworthy of its name.

Along this stretch of road for some twenty-five miles, it was a joy to find a level reach where top gear could be engaged for any considerable time, bottom and middle gears frequently being required for the safe negotiation of the down slopes. In Harris, unlike Lewis, the villages are not found along the main road, but are scattered along rough tracks branching

A distant view of the range of mountains on which is the famous trials hill, Applecross. The village of that name can be discerned on the banks of the loch.

off at either side over the rocky, hilly country. Along one of these we ventured to take the machine, a feat which was safely managed by careful slow driving on middle and bottom gears. We were told later that we were the first to negotiate the track with a sidecar, the feat having been previously performed several times on a solo Triumph.



Showing the isolated position of the Hebrides.

Taking the boat from Tarbert to Lochmaddy, we had the pleasure of seeing the outfit swung up into the air by the ship's derrick and lowered into the hold.

North Uist possesses really only one road, running all round the island with two offshoots, the first to Carinish, the commencement of the North Ford to Benbecula, and thence to South Uist, and the second to Port Nan Long, the commencement of the Ferry to Berneray and Boreray islands in the Sound of Harris.

The motor cycling possibilities of North Uist are therefore easily exhausted. We, however, found plenty to interest us on the small island. Even on the first day of our arrival, while making our way from Lochmaddy harbour to our inn at Westford after dark, we disturbed a herd of deer which had wandered down from the hills to the roadway.

North Uist, too, is an island well dotted with lochs, many of which have round forts in them with winding causeways connecting them with land. There is also a few hundred yards from the road a huge chambered cairn, known as Langass Barp, which is in quite good preservation, and is the best example of a barp still standing, the barp itself being a type of structure only found in the Hebrides. The "Teampoull na Trionaid" at Carinish, too, a relic of early Hebridean Christianity, well repaid our visit.

As regards the machine, we found it absolutely equal to its task even on the stiffest slopes and roughest surfaces we encountered, and these were not a few. Sometimes, however, we would have liked a rear brake unaffected by climate. J.F.

A typical dwelling on the island of Lewis. Although crudely constructed it will withstand the most terrific gales.

# ROAD TESTS of NEW MODELS.

The "Light Six" B.S.A.

*SPECIFICATION.*

*ENGINE: B.S.A. side valves, V twin, 76 × 85 m.m. = 770 c.c.*
*LUBRICATION: Mechanical pump.*
*CARBURETTER: B.S.A. two lever.*
*GEAR BOX: B.S.A. 3-speed.*
*TRANSMISSION: Enclosed chains.*
*BRAKES: Dummy bell drums front and rear.*
*TYRES: 26in. × 3in.*
*PRICE: £132 Solo.*

SINCE the introduction of the 8 h.p. B.S.A., the 6 h.p. engine, which has already earned a good reputation, has been relegated to a lighter frame, and in its present form it is particularly well adapted to pull a light or medium weight sidecar. The machine in its standard form is remarkably well equipped with cast aluminium chain cases, comfortable footboards, and a spare detachable rear wheel may be supplied. In addition to all these fittings the actual model placed at our disposal was fitted with Lucas Magdyno lighting set, a pair of most practical leg shields, and the large sheet aluminium windscreen which attracted so much attention at the last Motor Cycle Show at Olympia.

### Behind a Complete Windscreen.

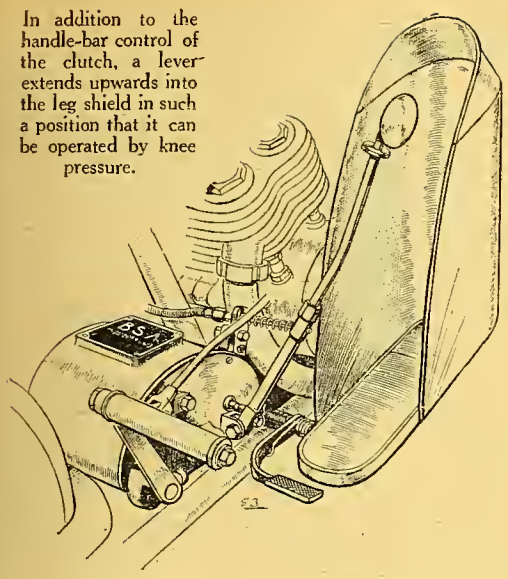
As the screen is the most noticeable fitting, it is as well to deal with it first and to sum up the pros and cons. The writer, who usually chooses a more or less sporting solo mount for his own use, seated himself behind the protecting wings of the big screen with a feeling which almost amounted to prejudice, and a tendency to look round or over the shield had to be consciously restrained for the first few miles. After a short time, however, the folly of such a procedure became obvious, for the view of the road obtainable through the adjustable celluloid window is ample for most driving purposes. Just to begin with, the window was kept open for about 6 inches, but a cold head wind encouraged a trial with the window totally closed.

### Undoubted Advantages.

Having once discovered the advantages of full protection, the feeling of security and comfort steadily increased, and after driving through an adverse hailstorm in the dark the conquest was complete. There is no doubt whatever that an adequate shield would be a blessing to hundreds of motor cyclists who ride daily through the winter, and the B.S.A. Co. are certainly on the right lines with their somewhat daring introduction. Concerning the head resistance, it would appear that this is but slight, for although the machine was ridden for nearly three hundred miles both with and without the shield, it was in position when the highest speed was actually accomplished.

Few experimental devices are without disadvantages in their early forms, but the disadvantages of the B.S.A. shield are not of major importance, neither are they by any means insuperable. Firstly, on rough roads the metal shield is apt to be noisy in itself; secondly, it intensifies any mechanical noises of the motor cycle; and thirdly, a trip over dry roads brought to light the fact that a certain amount of dust was sucked up behind the screen and was apt to get in the rider's eyes.

Now as to the 6 h.p. B.S.A., the engine is flexible and free from any serious periodic vibration. The flexibility and economy are materially increased by a



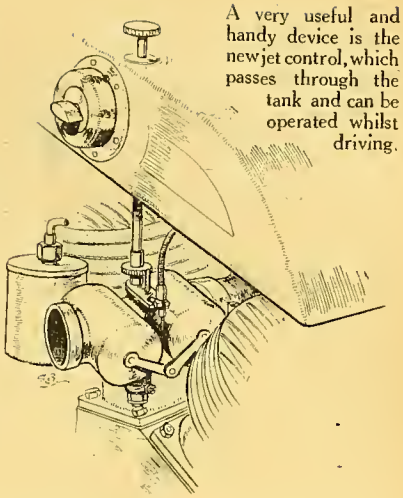
In addition to the handle-bar control of the clutch, a lever extends upwards into the leg shield in such a position that it can be operated by knee pressure.

simple jet control, conveniently placed on the top of the tank. This fitting is likely to become standard in the future, and it is certainly most useful.

### Knee Control for the Clutch.

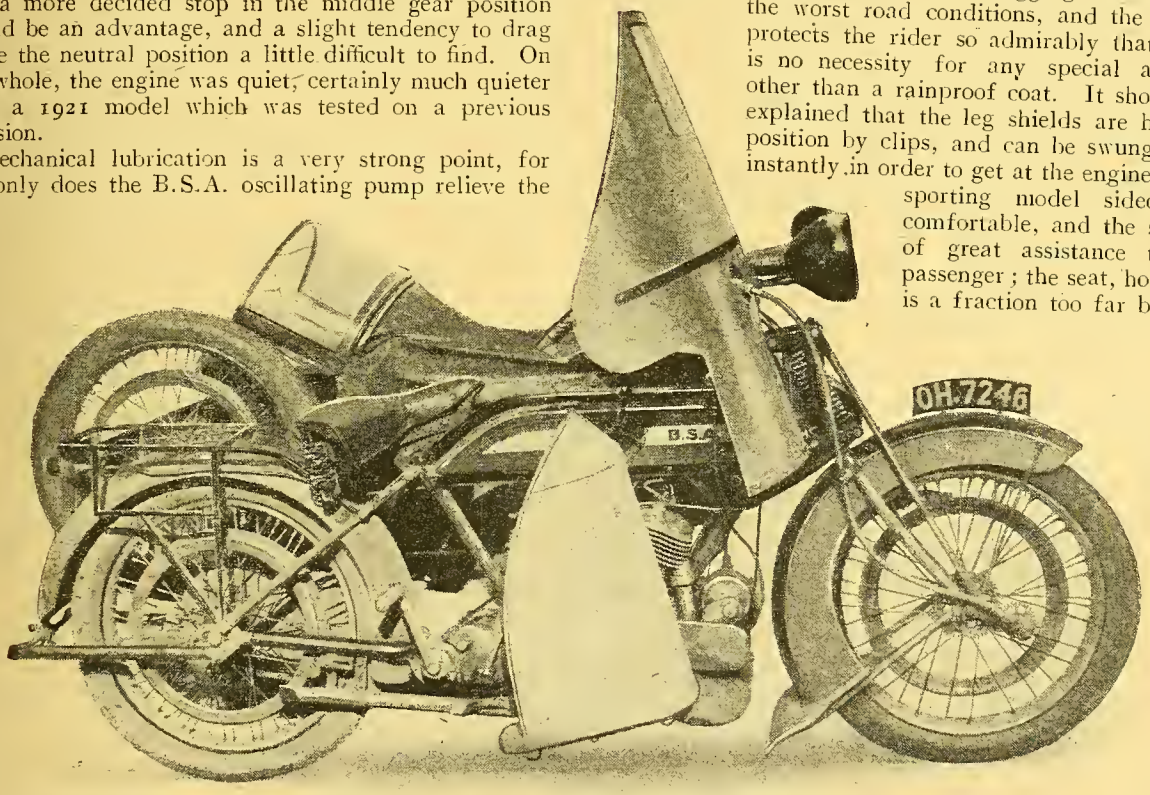
In addition to the normal handle-bar control we found an experimental knee clutch operation very convenient; in fact, the hand control was seldom used; the clutch itself is sweet in action. Gears are easily changed, but a more decided stop in the middle gear position would be an advantage, and a slight tendency to drag made the neutral position a little difficult to find. On the whole, the engine was quiet, certainly much quieter than a 1921 model which was tested on a previous occasion.

Mechanical lubrication is a very strong point, for not only does the B.S.A. oscillating pump relieve the rider of all worry, but, in conjunction with the roller and ball bearing engine, it is remarkably economical. The rear brake is admirable, and the chain transmission smooth at all but low speeds on top gear, and we found the riding position, combined with a Terry saddle, ideal for sidecar work.



A very useful and handy device is the new jet control, which passes through the tank and can be operated whilst driving.

During our road experience, which included much of the Colmore Cup Trial route, the machine performed steadily throughout; it is capable of a good turn of speed, and appears to revel in long runs on generous throttle openings. Hill climbing is well up to all reasonable requirements, and the engine remains clean externally even after a long, fast trip. Cleanliness is certainly a feature of the machine, and the mudguards are excellent. With the leg shields in position we found no need for leggings even under the worst road conditions, and the screen protects the rider so admirably that there is no necessity for any special apparel other than a rainproof coat. It should be explained that the leg shields are held in position by clips, and can be swung away instantly in order to get at the engine. The sporting model sidecar is comfortable, and the step is of great assistance to the passenger; the seat, however, is a fraction too far back.



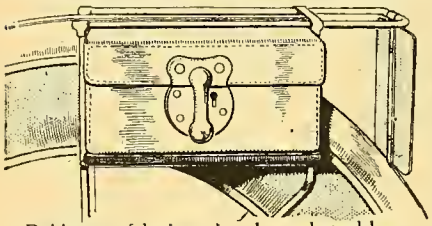
With its ample shields the B.S.A. may be ridden for long distances in bad weather without special clothing. The leg shields can be instantly hinged away to provide access to the engine.

# IDEAS: USEFUL AND INGENIOUS.

A Selection of our Readers' Home-made Gadgets, with some Practical Hints on Work in the Garage.

## Eliminating Tool-bag Rattle.

BRIEF and to the point is Mr. D. J. Balderson's idea for preventing noise from the pannier bags of his Triumph machine. A rubber or felt pad

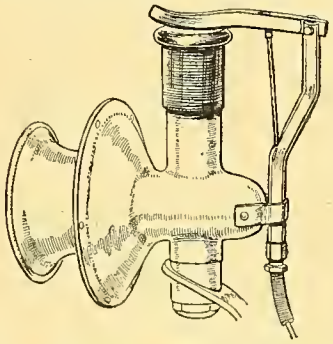


Rubber or felt insertion beneath tool-bag on Triumph carrier pannier platform.

is inserted beneath the bottom of the bag and the platform on which it rests; this packing he has found to eliminate a rattle which could not be obviated otherwise, no matter how tightly the bag was packed.

## Operating Mechanical Horns from the Handle-bar.

IN all probability Mr. A. H. Swann is an organist, for he has arranged a Cowey horn on his machine for either pedal or keyboard (pardon—handlebar!) operation. The instrument is fitted horizontally on the front down tube so that an inward pressure with the toe produces the desired result. The handlebar control consists of a piece of suitably bent 5/16in. brass tube fitted



Simple wire control for Cowey horn.

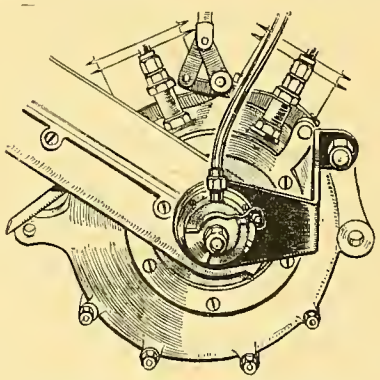
to the back of the horn; a Bowden stop is screwed into the tube at one end. There is an elongated hole in the elbow of the tube through which the wire passes to the lever pivoted in the cleft upper end of the tube. No return spring other than that contained in the horn plunger is necessary, providing the wire from the bar is led by easy curves.

## Moving Obstinate Valve Caps.

A SEA-GOING engineer who writes from aboard ship gives a stock method the engine-room staff uses for moving any screwed part that has rusted up. For example, he instances a ship's side dead light (cast iron), which, although immovable previously, yielded to their simple treatment, which is merely to soak a lump of cotton waste in vinegar and leave it on the immovable part for a few hours, or all night, if possible. Our reader, who motor-cycles when in port, suggests that this method is much safer than "a spanner and six feet of gas pipe" on a refractory valve cap, as recently recommended by a correspondent.

## Fitting a Mechanical Pump on a Matchless-M.A.G. Engine.

WE have had samples of the Best mechanical pump fitted to at least three of our staff machines, with satisfactory results, and have not experienced the need for a fitment such as that described below, which is sent in by Mr. H. Tyler, of Boston. However, this

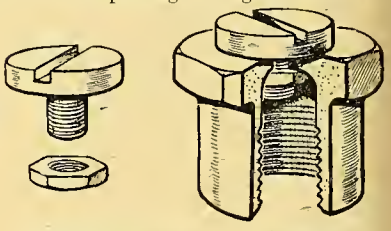


Torque reaction plate for Best pumps.

reader considers that on his Matchless machine (M.A.G. engine) the strengthening plate between the pump casing and the magneto chain case is an advantage. The sketch is really self-explanatory. Mr. Tyler mentions that in fitting the pump it is very necessary to secure perfect centring for the pump spindle and for the circle on which the holes for the holding screws must be drilled. Having fitted two of these pumps with our own hands we concur in his opinion.

## Repairing Badly Worn Tappets.

ON a Cornish reader's machine, the tappet heads were worn into such deep depressions that adjustment became very inaccurate. A new lease of life was given to the parts however, by drilling a hole through the centre of the hollow and passing through a screw with

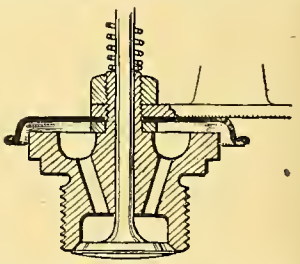


Method of building up a deeply worn tappet head.

a large flat head, which was filed down to the required thickness. The screws were cut off so that they would take a very thin nut inside the tappet head, it being possible in this case. On some engines it would be impossible to fit a nut inside the tappet head, in which case the latter might be tapped for the screw, which could be slightly riveted over inside. Case-hardening of the screw head would be advantageous.

## Preventing Release Valve Blowing Oil.

RIDERS who use two-stroke engines which are minus the refinement of an enclosed release valve that is connected to the exhaust system are often afflicted by the messy blowing of oil on to the under side of the tank. Mr. A. Charlton, of Ipswich, has cured this defect by very simple means, which can be applied to many makes of engines. All that is needed is a thick washer of bore suitable for slipping over the release



Carbide tin lid used as an oil trap on a two-stroke release valve.

valve guide, and a carbide tin lid punched with a hole of the same size. The washer goes on the guide first, then the lid, then the usual control mechanism plate and nut, etc., holding all in position. This tip is not applicable to engines where the escape holes from the valve blow out at right angles to the valve stem, of course.

# THREE MILES A PENNY!

## Being an Account of a Ride from Hyde Park Corner to Yarcombe, Devonshire, on a Motorised Bicycle.

A cast by the road-side, with the Cyclotracteur conveniently near.

I WILL admit that I was rather sceptical when a friend recommended me to purchase a motor attachment for my pedal cycle. I wished to journey to Devonshire, and I was doubtful if the "Cyclotracteur" would negotiate all reasonable hills.

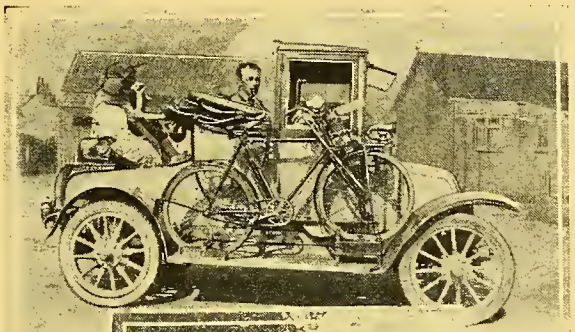
Inspired by a spirit of adventure, I made the plunge—twenty guineas and my faithful old pedal cycle became a motor vehicle.

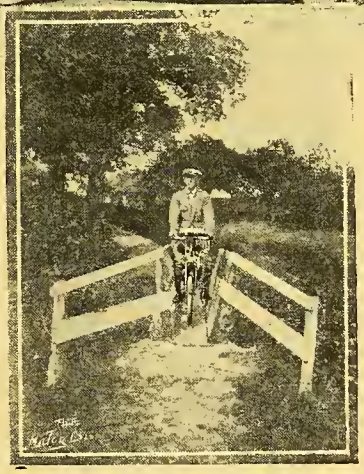
On a Thursday I wired my friends that I was due to arrive at Stotehayes, near Yarcombe—a matter of 150 miles—on Friday. "What an optimist!" I said to myself. Within a few minutes of mounting my bicycle—if the truth be known I was a bit nervous—I found I was quite *au fait* with the simplest of controls, and was sailing along at a good speed and with ease, leaving Edgware Road at 11.30 a.m.

Having safely negotiated all the tramlines, I found myself on the Staines Road. What a wonderful run it is through Virginia Water! A great wide road with a good surface, firs on either side, and a pleasant little surprise in a picturesque waterfall on the right-hand side of the road. Knowing how easy it was to start up my little machine, I had no compunction in pulling up, propping it against the side of the road and taking in the beauties that existed on all sides.

### 88 Miles in the Day.

Off again on a splendid spin to Sunningdale, I found the level crossing gates closed, and so decided to lunch at the Sunningdale Hotel. After a threequarters of an hour's rest I continued my journey, and passed through Bagshot and Farnboro', where I took in some petrol: the little tank holds nearly a quart, which is sufficient for about fifty miles. I had tea at Andover after travelling 63 miles. The distance between Andover and Salisbury—18 miles—was covered in 59 mins. It is a wonderful stretch through open country on a switchback road, mounting all the time, the downs stretching out for miles on either side, with splendid views.





(Top.) The short wheel-base of the motorised bicycle enabled it to be carried on the running board of the Renault.
(Bottom.) In by-lanes and when crossing narrow bridges the machine was found very handy.

I stopped at Salisbury for refreshment, and proceeded to Wilton, where I decided to stay for the night. This is a charming old-world village, and distant from London 88 miles. After a dinner composed of wonderful Wiltshire bacon and tomatoes, I went to the local inn, and there heard the local gossip discussed over pots of cider, and so to bed—as Pepys would say.

### The Second Day.

From Wilton next morning at 10.30 I journeyed through Shaftesbury, where I stopped for an hour, then down into Sherborne. The country was getting more hilly every mile, but still my machine "carried on" in game fashion. I reached Sherborne, lunched at the Half Moon, and had a long rest, visited the Digby Arms and took in petrol, and so into Yeovil, famous for its leather tanning and glove making. It is a beautiful run from there into Ilminster and on to Chard. Here I stopped for tea and started off on the long hill that leads from Chard into Yarcombe. Devonshire at last!

My destination was a fishing cottage on a farm about one and a half miles

**Three Miles a Penny.—**

from Yarcombe and down a country lane. At the bottom of the lane is a ford across the River Yartey, and a small wooden bridge only 1ft. in width. It was here I found an advantage of my machine, being able to get it across the bridge. A larger mount might have necessitated a *détour* of some six miles to reach my destination. I took the Cyclotracteur over the bridge, across some fields, and arrived, having covered 150 miles on one and one-third gallons of petrol and a shillingsworth of oil.

Later, as an experiment, I rode through the ford without detriment to the engine, which is placed above the front wheel. I do not think I remember having enjoyed a trip more than this one.

I carried my luggage on a carrier at the rear, the total weight, including myself, being about 200lb.

C. H. C. N.

# DYNAMOS FROM OLD MAGNETOS.

## Some Further Details in the Construction of a 25/- Dynamo.

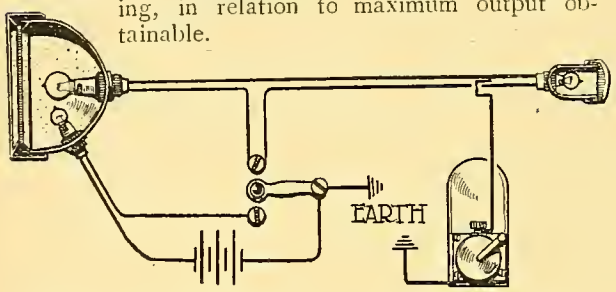
SO many enquiries have been received from readers asking for further details as to the construction of the dynamo converted from an old magneto, which was described in *The Motor Cycle* a few weeks ago, that further explanation seems necessary.

The various queries submitted were:

(1.) Fitting a rear lamp and best bulbs to use.

(2.) Whether a twin-cylinder magneto could be used.

(3.) Size of magneto, and wire used for rewinding, in relation to maximum output obtainable.



Wiring diagram showing parallel wiring of head and tail lamps, and also dry battery circuit for small bulb in the head lamp.

(4.) Speed of dynamo; direction of rotation and whether possible to charge accumulators.

(5.) Method of drive for inside flywheel engine.

### Fitting a Rear Lamp.

The lighting of two or three lamps presents certain difficulties, the dynamo functioning best when only one lamp is required as on a solo machine.

It will be realised, then, in order to fulfil the conditions specified in the previous article, that it is essential that the current used by the lamp should be exactly equal to the maximum amps. obtainable, *i.e.*, if two lamps are used, their combined currents must not exceed this maximum. This rather complicates matters, since if only 1 amp. can be taken from the dynamo, both bulbs would have to take 0.5 amp. each, since bulbs are not obtainable in fractions of an amp. less than ½ (*i.e.*, 1, 1.5, 2 amps., etc.).

It will be seen that such an arrangement of lamps would seriously impair the brilliancy of the head light, and would give an unnecessarily bright rear lamp.

Of course, if 2 amps. were obtainable a 1 amp. and ½ amp. bulb could be used; but since they would have to be wired in parallel the burning out of one lamp would cause the whole of the available current to flow through the other, which would also cause it to burn out quickly.

The method used by the writer is as follows:

The maximum current obtainable was found to be approximately 1 amp. (1.3 amps. to be exact). The bulbs chosen consisted of an 8 volt 1 amp. head and a 12 volt ½ amp. bulb in the rear, both lamps being run in parallel.

The total resistance of the parallel circuits will be 6 ohms $\left( i.e.,\ \frac{1}{R} = \frac{1}{8} + \frac{1}{24} \right)$ and the lamps will share the current in the ratio of their respective resistances of 3 to 1. As the total current available is 1.3 amps., and the combined resistance is 6 ohms, neither of which are variable, the following equation is obtained by Ohm's law:

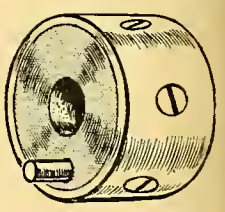
$$\text{Voltage} = \text{Res.} \times \text{Current} = 6 \times 1.3 = 7.8 \text{ volts.}$$

Therefore, the current in the head light will $= \frac{\text{Voltage}}{\text{Res.}} = \frac{7.8}{8} = 0.98$ amp. (approx.), and current in rear light $= 0.325$ amp.

The respective candle-power of the two lamps will be 7.65 and 2.5 (approx.), the light obtainable for the rear lamp being quite sufficient to give a good red light.

### On Sidecar Machines.

The use of such a dynamo to light three lamps on a sidecar outfit is not advisable, as, in the writer's opinion, the brilliancy of the head light would be seriously affected, but if it were attempted a good arrangement of bulbs would be: Head and side lamp 8 volt ½ amp. bulbs, rear light 12 volt ½ amp. bulb.



The reconstructed slip ring.

Of course, readers may obtain a different maximum current from their respective dynamos, but the principle still holds good, and the size of bulbs may be worked out as follows:

First obtain maximum current obtainable either by means of a fairly sensitive ammeter or by the bulb method as previously described. Then decide upon the speed at which maximum light is required, and

**Dynamos From Old Magnetos.—**
note the voltage obtained. Use a head light bulb of this voltage, which will take nearly *but not the whole* of the available current. Choose a rear light bulb of the lowest possible ampèrage obtainable and of a voltage approximately one-third greater than the head light bulb. It is of the utmost importance that the amps. taken by the bulbs when added together should not exceed the maximum amps. obtainable, and they must be wired in parallel and operated by the same switch, as shown in the diagram.

### Twin Magnetos.

A twin-cylinder magneto may be used, but as the slip ring is insulated over part of its circumference another must be substituted, which may be constructed as follows:

Obtain a piece of hard red fibre and turn it down until the outside diameter is 1½in. Over this fit a brass ring about $\frac{1}{16}$in. thick, and secure it in the fibre with short countersunk brass screws. Bore out the centre of the fibre to fit the armature-shaft, and in the side of fibre fit a wooden peg, which is inserted in the hole bored in the armature end plate, thus preventing the slip ring from turning round on the shaft.

Care must be taken that the width of the constructed slip ring is exactly equal to that of the one removed, or else the brush will not run on the centre of the ring.

### Size of Magneto and Wire Used.

Any size of magneto may be used, provided it can be fitted to the machine. In general the larger the magneto the greater the maximum output, but as the latter depends entirely upon the strength of the permanent field, it is quite possible to obtain a larger output from a small magneto with a strong field than from a larger one with a comparatively weak field.

The size of wire used will neither increase nor decrease the maximum output in watts. This is rather difficult to explain in non-technical language, as the output is governed by armature reaction. This reaction, on weakening of the main field, is due to the current flowing round the armature coils multiplied by the number of turns of wire, and is known as ampère-turns.

As an example, consider a dynamo wound with 200 turns of 20 S.W.G. and giving a maximum output of 1 amp. at 8 volts. Then the permissible ampère turns allowed, before any appreciable weakening of the field sets in, will equal $200 \times 1 = 200$ ampère-turns.

If the dynamo were rewound with 25 S.W.G. wire, more turns could be placed into the winding space available, say 250, and since the voltage generated is proportional to number of turns, this increase would give a corresponding increase in voltage equal to $\frac{250}{200} \times 8 = 10$ volts; but since the ampère-turns must not exceed 200 the permissible current would now be $\frac{200}{250} \times 1 = 0.8$ amp., and the maximum watts obtainable will equal 8 watts, and are the same as that obtained when the 20 gauge wire was used. The chief effect of a different sized wire is to alter the voltage obtainable at a given speed, but it does not give any increase in the maximum output obtained.

### Speed and Rotation of Dynamo.

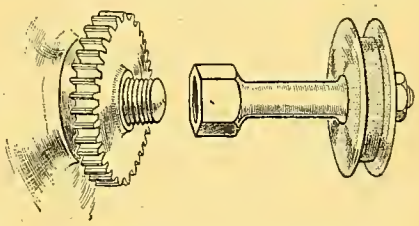
The dynamo may be driven in either direction, and for intermittent use the speed may be as high as twice that of engine speed without damage to the bearings, the belt being removed during daylight.

It is not possible to charge accumulators, since the current obtained is alternating. The dynamo is earthed, as shown in the wiring diagram, to the frame of the machine, to which the lamp is also earthed *via* the switch.

### Method of Drive for Internal Flywheel Engine.

The simplest method would be to extend either the mainshaft or the magneto-shaft, which could be accomplished as follows:

Obtain a piece of hexagonal mild steel and turn it down over part of its length to, say, ½in. diameter, leaving sufficient of the hexagonal portion to act as a nut. Bore out and screw the inside of this portion to the same size of thread as the existing lock-nut, and substitute. Another hole will then have to be bored in the timing case cover to allow the turned-down portion to protrude outwards, the dynamo pulley being secured to this by any suitable method.

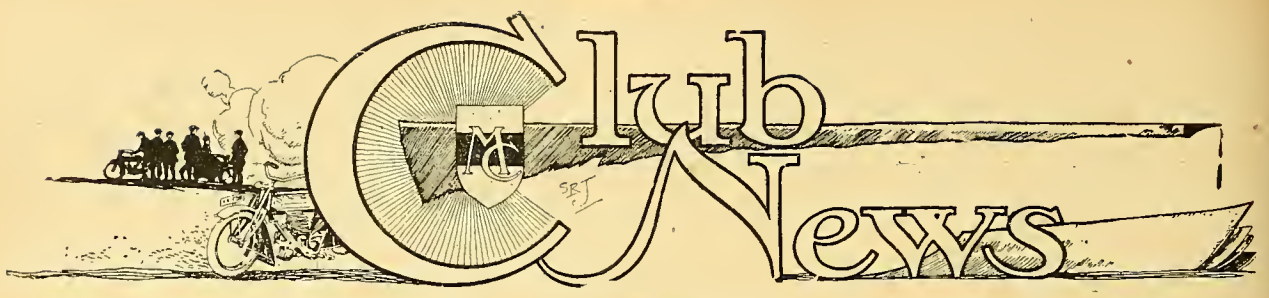


A suggested method of a dynamo drive from an engine with internal flywheels.

In conclusion, the best method for readers to adopt is to first make the dynamo as previously described and then to carry out their own experiments as to bulbs to be used, method of drive, etc., using the instructions given in this article as a guide to the correct procedure to be adopted. W.R.

## TIMING SPRINT RECORDS.

AS is only obvious, electrical timekeeping is surely coming into its own. At a recently held meeting of a special Timekeeping Sub-Committee of the A.C.U., consisting of Mr. H. P. E. Harding (in the chair), Col. F. Lindsay Lloyd, C.M.G., Prof. A. M. Low, D.Sc., Messrs. A. V. Ebblewhite, and A. G. Reynolds, it was decided to recommend to the Competitions Committee that in the case of all attempts at records up to one mile the time should be taken within 1/20sec. by means of an electrical chronograph, the records to be timed by two or more official timekeepers stationed at the commencement and finish of the different distances attempted. All claims for record must be accompanied by the official documents, and, in the case of Brooklands, the actual tapes recording the times on the chronograph must be produced.



### Yorkshire Centre A.C.U.

Saturday's hill climb on Sutton Bank, which has gained an excellent entry, will start at 12 noon.

### Falkirk and District M.C.

Amulree was the test hill in the opening reliability trial on the 5th inst., but presented no great difficulty; nine competitors finished. A special prize was awarded to J. Patrick (2¾ Douglas).

### Eastern Centre A.C.U.

On Saturday, the 29th inst., a half-day reliability trial will be held by the Ipswich and District M.C.C., open to clubs in the centre, entries closing this morning.

### North-Western Centre A.C.U.

All motorists are cordially invited to the big rally at Rawcliffe Hall on the 23rd inst. Various prizes are offered, including the Motor Agents' Cup for the best club attendance and mileage figure.

### Herts M.C. and L.C.C.

The first sporting event of the summer season—a paper chase—was held on the 8th inst. Eleven false trails were laid, and there were several unexpected fords and hills. The winner was T. Derek Chapman (8 Zenith), 18.07 m.p.h.; second, B. G. Robbins (4 Triumph), 16.85 m.p.h.; third, S. R. Mardon (2¾ Francis-Barnett), 15.8 m.p.h.

### East Midland Centre A.C.U.

Club awards in the open trial of the Leicester M.C. held on the 25th ult. have now been announced, as follows:—

Petty Trophy and Gold Medal (For best performance by a Leicester Club amateur):
Alex Bowerman (2½ Velocette).
Gold Medal (For the best performance by a Hinckley Club member):
G. White (3½ o.h.v. Triumph).
Gold Medal (For the best performance by a Loughboro' Club member):
H. Gibson (2¾ Raleigh).
Silver Medal: G. Marsh (4 Triumph).

### East South Wales Centre A.C.U.

On Saturday, May 6th, the centre is holding a reliability trial, starting at Brynmawr, and going through Brecon, Merthyr Cynog, Builth, Hay, Trefadoc, Longtown, Pontulais, Broadoak, Monmouth, Llangwm, Usk, Little Mill, Abergavenny. It is open to members of the centre only, and any machine is eligible to compete. The Abergavenny, Brynmawr, and Blaina clubs are organisers, and full particulars may be obtained from hon. trials secretary, Mr. H. E. Prichard, chemist, Blaina. Observers are required.

### Mid-Bucks M.C.C.

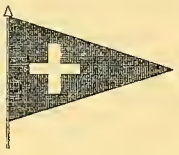
Already possessing a very satisfactory membership, the club is reviving its pre-war activities, and has arranged an interesting programme for 1922. Mr. H. T. Ball, 159, Cambridge Street, Aylesbury, is the hon. secretary.

### Burnley and District M.C.C.

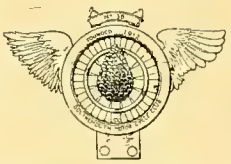
On the 30th inst. the opening reliability trial will be held for the Whitehead Cup. New members are enrolling at each meeting, and all local motorists interested are invited to join. The hon. secretary is Mr. J. Collinson, 9, Fir Street, Burnley.

CLUB PENNANTS AND BADGES.

Coventry District Works Motor Association: Yellow ground with black spots and lettering.



Neath and District M.C.: Black with Maltese cross in white.



Bournemouth and District M.C. and L.C.C.: Silver badge with the fir cone enamelled in natural colours.

Harrow and District M.C.C.: Club badge.

### Berkhamsted and District M.C.C.

Fine weather and a fair number of competitors and interested spectators attended the club's maiden venture in competition organisation, a hill climb at Aston Clinton. The class winners were: A. Driscoll (3½ Norton), B. Hobson (2¾ Douglas), and C. Hill (3½ Douglas sc.).

### North Eastern Centre A.C.U.

At the Centre Board meeting, held on the 7th inst., arrangements were made for the team trial to be held on May 21st. The route chosen is: Newcastle; Shotley Bridge; Castleside; Stanhope; Peat Hill; Rookhope Chimney; Allanheads; Burtreeford; Killhope; Allandale. *Return*: Allanheads; Stanhope; Allansford; Corbridge; Newcastle. (119 miles.)

### East Lothian M.C.C.

An opening run was held recently from Haddington to Dunbar, Grantshouse, Duns, Lauder, and home *via* Soutra Hill, its success auguring well for the progress of the club.

### West Herts M.C. and L.C.C.

At a meeting held at the Swan Hotel, Rickmansworth, the above club was formed, officers elected, etc. Anyone interested should communicate with Mr. H. H. Lewis, 18, Church Street, Rickmansworth, Herts.

### Ayr M.C.C.

Over thirty entrants faced the starter in the recent opening reliability run. The course included Burnfoothill, which was the tit-bit, but quite a number made a clean climb.

All Ayr and district motor cyclists are asked to join up for sport and pleasure. The hon. secretary is Mr. T. Gilchrist, Ashgrove Street, Ayr.

### Cookstown and District M.C.C.

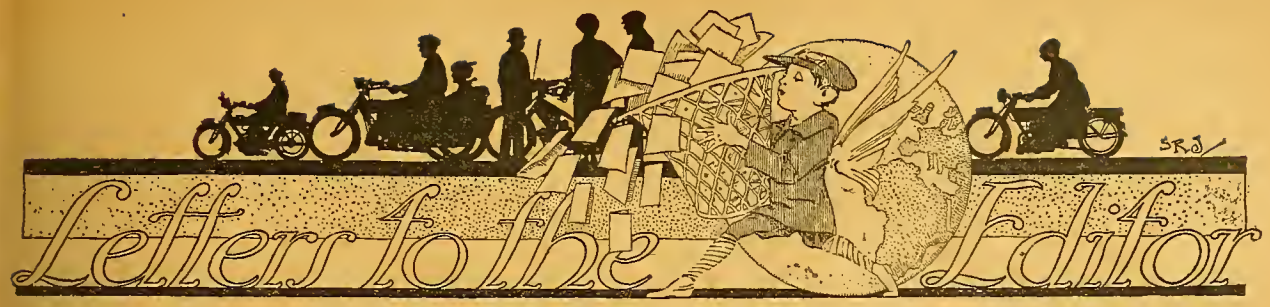
Three very interesting events will be held on May 4th, including an open reliability trial consisting of five circuits of a two-mile course at speeds varying from 15 m.p.h. to 27 m.p.h.; and a T.T. handicap race of 25 miles over the same course. Entry forms may be obtained from Mr. Arthur Gourlay, Cookstown, Ireland.

### Luton and South Beds. A.C.

The opening run has been fixed for Saturday next, it being proposed to have a social run, with a halt for tea and a sing-song. Mr. E. J. O. Sansome has been elected captain, Mr. Dunham vice-captain, and Mr. C. Dickinson secretary, with Mr. S. W. Brown again holding the purse-strings. Trophies for competition this year will include a new challenge cup, presented by Lord Ludlow, M.F.H., the president.

### Liverpool M.C.

There were 92 entries for the club's first run of 1922. An interesting machine was a 2¾ h.p. Sunbeam, with overhead valves. The competitors started off in pairs at intervals of 30 seconds, for Chester and Broxton to Peckforton Gap, where there was a stop to permit of a hill climb. A clean ascent was made first time by Miss Cottle, riding a 4 h.p. Triumph, J. H. Fox on a 4 h.p. Norton, and C. H. Fox also on a 4 h.p. Norton. Perseverance rewarded the efforts of S. H. Falck (4 Triumph), L. G. Copley (3½ Norton), and T. Dehaney on a 2¾ h.p. A.J.S.



The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address.

### *ULTRA-RAPID AMERICAN TWINS.*

Sir,—With reference to the original letter regarding "Ultra-rapid American Twins," we trust that our friend of the "particularly hot single" has by this time suitably disposed of his very particularly hot stuff Bonniksen.

Slough. DOUGLAS, BEARDMORE, SHANKS.

### *LIGHTWEIGHT CLASSIFICATION LIMITS.*

Sir,—May I plead for a more general adoption of the 275 c.c. limit, as opposed to the 250 c.c. one, as the smallest class in speed trials and the like? In looking through your "Buyers' Guide," I noticed no fewer than twenty-nine makes of motor cycles with one model of their engines of 269 c.c. Now, in a speed trial none of these machines would stand any chance against, for instance, a 2¾h.p. A.J.S., which is, however, in the same class, and therefore the owners of these machines wisely abstain from entering. A 275 c.c. limit would, I am sure, produce a very considerable increase in the entries. "METRO."

Congleton.

### *OIL-COOLING AND WORN PISTON RINGS.*

Sir,—The oil-cooled engine does not depend on the piston rings proper to prevent the increased quantity of oil circulating through the engine from entering the combustion chamber.

I believe all oil-cooled engines are fitted with a scraper ring on the skirt of the piston whose duty it is to return to the crank case any surplus oil that may reach the cylinder walls on the upstroke of the piston.

It might interest your correspondent to know that owing to the improved cooling of the piston due to the large quantity of oil circulating in the crank case carbon does not form either on the crown of the piston or round the rings to the same extent as in the average air-cooled engine. The rings are, therefore, left free to do their work in an efficient manner and do not become gummed up. This consequently increases the life of the piston rings, and for these reasons, therefore, the oil-cooled engine does not suffer in the manner suggested by your correspondent to any greater extent than other types of either air- or water-cooled engines. G. CAMPLING.

### *GARAGE HUNTING DURING T.T. WEEK.*

Sir,—As the T.T. Race week is approaching, I would like to know if any persons or garages are likely to make provision to cater for the number of motor cyclists who find it more convenient to travel to Liverpool by road. From past experience, I know that motorists have to do a lot of skirmishing around to find a garage or suitable place to store their machines, particularly if any mishap has caused them to arrive in Liverpool late. The following suggestions are offered for what they are worth:—1. That arrangements be made at all garages conveniently situated to have their addresses and charges published in *The Motor Cycle*. 2. That an A.A. or R.A.C. Scout be on point duty at suitable road junctions, furnished with a list of places to direct strangers on entry to Liverpool. Something worked on these lines would be greatly appreciated by those who travel to get the night boats. A. E. BEARD, Capt.

### *"VALVE BOUNCE MADE VISIBLE."*

Sir,—I thank Mr. A. J. H. Elverson for the information conveyed by his letter. I agree that the insertion of 101 per cent. in place of 99 per cent. was an error, and I am glad that he realised it was clerical and not intended.

As regards his technical points—1. (*a*) Has he ever attempted to measure the frequency of a tuning fork by means of the stroboscopic disc? If so, did he notice any halation effect? (*b*) Is there a variable cam in the oscilloscope to allow for sufficient illumination at high speeds and good persistence of image at low speeds? I cannot imagine that the arrangement of a variable shutter or apertnre would present an insurmountable obstacle.

2. I agree that a truly flexible drive is out of the question, but an adjustable drive free from cyclic hunting is the matter of a very few minutes' thought.

3. A motor driven off a *direct* current main should be free from appreciable cyclic aberration. Reverting to point 1, the stroboscopic disc mentioned is driven by electric motor and cyclic aberration is not noticeable.

In high speed cinematography relative aberration is not present to any extent.

In conclusion, I would be glad of the opportunity of accepting Mr. Elverson's invitation to inspect the oscilloscope. R. A. DENNE.

### *ARTIFICIAL OBSTACLES IN AN OPEN TRIAL.*

Sir,—Seeing Mr. J. A. Newman's letter, I wish to state that while detained upwards of two hours at the top of the hill previous to Hunger Hill, I was able, with the aid of binoculars, clearly to distinguish officials replacing boulders in their original position after they had been disturbed by the passage of competitors. This was on the second bend of Hunger Hill.

I regret I am unable to give you the actual names of the persons who replaced these rocks, but there is no doubt in my mind that they were officials, as they wore the armlet.

W. L. DANSKIN.

[It seems possible that our correspondent mistook the action of one or two spectators who endeavoured to improve the road surface on this hill by filling in the worst holes with large flat slabs of stone; their motives were good, but whether the action was really helpful or not is another matter.—ED.]

Sir,—I have just received a list of the awards in the East Midland Centre Open Trial, and this appears to me to be as big a farce as the trial itself. No account is given of how many marks any competitor lost, or how he lost them, and therefore no competitor knows how he stands. It would be interesting to know how the Leicester Club has arrived at the results, owing to the chaos which prevailed throughout the trial.

First—as competitors were not allowed to stop and sign at checks and were only allowed one minute early or late, nobody knew if he had lost marks at a check or not.

Secondly, competitors were held up at the foot of every hill, and could not obtain information from the officials how long they had been held up for, and in one instance no times

were taken at all, consequently nobody knew what time he would be expected to arrive at the next check. Then, again, I myself was held up so long at the foot of Hunger Hill that I arrived at the lunch check at Matlock one minute *after* I was due to leave after lunch. When I complained that I wanted lunch I was cheekily told by an official that I had had my two hours at "Hungery" Hill; consequently I left this control, after filling up with petrol, without any lunch and late on my time, and no allowance made for this delay.

Amongst the surprising things in the results is the fact that one competitor has obtained a gold medal who was reported to have parted company with his machine on one hill, which entailed a loss of 12 marks, and is shown in a photograph on another hill with his foot on the ground, which according to the rules lost him 5 marks—17 marks in all. In all my years of competition work I have never competed in a trial where the organisation left more to be desired, or an open A.C.U. trial where the open competition rules were treated with such utter contempt. Also the placing on the road of artificial obstruction was the most unfair thing I have ever known in any trial. I maintain that most of us were induced by the Leicester M.C.C. to enter what was purported to be an ordinary A.C.U. one-day trial, run on the same lines as the A.C.U. themselves would run it, and under the same rules, and we were badly let down.

ARCHIE G. COCKS.

*RADIATION OF HEAT.*

Sir,—Your contributor, "E. N. J.," writing about cooling, states that heat is dissipated from a water-cooled engine by water flowing round the cylinder carrying away the heat by convection; he then states that an air-cooled engine is cooled by radiation.

Surely, since air is flowing round the cylinder at an even greater rate than the water in the previous case, the air must take the heat away by convection also. Furthermore, supposing "E. N. J." is correct and the heat from an air-cooled cylinder is dissipated by radiation, why fit fins (misnamed "radiating")?

Radiation is the transmission of heat from one body to another without necessarily heating the substance in between them, the transmission of heat having nothing to do with the contact of one object with another. The fins fitted to the cylinder, being there to increase the surface exposed, are therefore useless, put there as ornaments or dust traps.

Personally, when my cylinder gets sufficiently hot to dissipate an appreciable amount of heat by radiation, I stop, light a cigarette on the head thereof, and wait till I have finished it before proceeding.

"ENIL MAERTS."

Derby.

*EQUITABLE INSURANCE.*

Sir,—Your contributor "X.Y.Z." in the issue of April 6th appears as an apologist for the insurance companies, and tells us that for the insurance pool to be *equitably* administered it is necessary that the careful and skilful suffer for the careless, clumsy, and unscrupulous. This may be necessary up to a point; but is it *equitable*?

My great objection to motor cycle insurance has always been this one point. I have driven a motor cycle for sixteen years in many countries and three continents, and have never—I touch wood—been concerned in an accident that would have cost an insurance company a single pound. A friend of mine has a son who, in his first season of motor cycling and insurance, has had paid two heavy accident claims and one total loss by theft. We are insured through the same agent, and my season's mileage is more than double his. To insure at the beginning of last season we were absolutely on level terms. I got no advantage whatever for my previous safe record. I and all other experienced and careful riders are put on exactly the same footing as reckless novices.

Surely this is not necessary. A life office does not accept all and sundry without investigating their expectation of life, and they adjust their tables accordingly. As it is, I insure for total loss and third party risk only, as I do not believe in benefiting the incompetent and the road hog more than I can help.

I feel sure that if this matter, which many find a real grievance, is ventilated in your columns, some enterprising office will be found who will come forward to adjust the inequity. Of course, all insurance is to a certain extent a gamble; but in this case the personal factor is so immensely important that it cannot reasonably be overlooked.

BERNARD SIFFKEN.

Sir,—Is it not a fact that the larger proportion of the liabilities incurred by the insurance companies is due to the "smart Aleck" who reckons to keep his machine up to date by saddling the company with every repair on as lavish a scale as possible, and who does not consider he has had a good season unless he has made the company repay him considerably more than the amount of his premium?

In my opinion, the legitimate use of insurance is only to safeguard oneself against large claims or losses too great for the individual to bear. I should suggest that the insurance companies issue policies only which put the first £2 10s. or £5 loss upon the insured; this would undoubtedly make him more careful and less likely to send in questionable claims of a few pounds, if a fair proportion of the loss fell upon himself.

Even under the present system, I feel sure, if the insurance companies examined their liabilities under such policies, they would find that they could allow a very much larger rebate than the 15 per cent. or 20 per cent. as at present, if the careful policy-holders were not made to bear the charges incurred by the type of rider mentioned above.

H. A. CHAPLIN.

*TUNING A 4 H.P. TRIUMPH.*

Sir,—I have pleasure in answering the queries contained in Mr. Barker's letter on page 460.

1. "Petrol consumption at 35-40 m.p.h."

I have no record of this, as I do not find it possible to maintain such a high speed on the road for long enough to get consistent results; but over longish runs with sidecar and luggage the fuel consumption has varied from 60 to 85 m.p.g., the extremes being the figures on petrol, driving hard against a head wind, and on benzole, in calm weather on the Great North Road. My average on tour seems to be about 72 m.p.g., this including, of course, sundry spurts on full throttle, as well as the normal one-third throttle required to keep up 25-30 m.p.h.

Solo, I have not any figures available, but in comparison with a friend's standard Triumph, on a long run we made together, I had slightly the advantage.

2. "Behaviour at slow engine speeds."

This is as nearly perfect as possible, the engine ticking over in neutral as slowly as will suffice to carry over compression.

Acceleration and power at *all* engine speeds are better than on any standard Triumph I have been able to compare it with, but acceleration would probably be improved by fitting an aluminium piston, such as on the machine owned by "Triumph 4" (whose identity it is not difficult to guess). However, for sidecar work I have concluded that a cast-iron piston is better.

3. "Gear ratio."

On the occasions when I have reached 60 m.p.h. solo, I have used a 16-tooth engine sprocket, giving a top gear of approximately 4.7 to 1. With a sidecar I used a 15-tooth sprocket, giving a 5 to 1 top gear, but I have now adopted a 14-tooth sprocket (5.4 to 1) as giving sweeter running without apparently affecting the maximum speed of the machine on the level.

As regards the Triumph spring fork, *I like it.* It has its disadvantages, notably in cornering, and it does not damp out pot-holes, as do some other forks of more elaborate but less rigid and strong construction; but it is capable of adjustment against sideplay, it is proof against sidecar drag, and it is the simplest fork on the market.

I have never had the least suspicion of a speed wobble, although at one time my handlebars were very "touring." Since then I have altered their shape so as to give better control with a very comfortable riding position, and I suppose they might now be called "semi-T.T."

I should mention that I keep my forks strapped up tightly against rebound, so that the spring is stressed in compression only. I have not had a broken spring on my present machine, but on another Triumph I owned I once

broke a spring on a very bad pot-hole, and rode for some days in reasonable comfort on the broken spring. This could not be done with a link fork using two springs arranged symmetrically.

I trust that the length of this defence of the Triumph fork will be pardoned. It appears to me that most of the recurrent adverse criticism (not, of course, in Mr. Barker's case) emanates from those who argue from theory rather than from practice, and that a statement of actual favourable experience might be worth putting foward. I think I ought to add the usual disclaimer.

KENNETH H. LEECH.

### *AMATEUR ROAD RACE DETAILS.*

Sir,—Now that a little of the suspense is over and we may reasonably hope for *the* race, and bearing in mind the usually hard-up speed-merchant (the enthusiast who "sells his shirt" for hill-climbs, etc.), whose reason for not competing this time, I hope, will not be the entrance fee, may I make a few suggestions?

1. That every effort be made to reduce the entrance fee to a rock-bottom figure (£10 to two or three probable competitors I know represents a terrific sum).

2. In view of the fact that the race is largely a personal matter (the man, not the machine), it would be very interesting and perhaps fairer to institute a class for competitors under 20 years of age; also to give them, if possible, a reduced entry fee, this because of the uncertainty of the depth of their pockets in most cases.

3. That the number of practice laps be limited to as few as should be sufficient, say 5.

4. That as a matter of course the usual classes should be run. I presume they would be run at the same time, so what matter?

With reference to suggestion 1, it might be interesting to add that the entry fees for the French and Belgian Grands Prix are £10 and £8 respectively.

Two laps seem ideal.

All honour to *The Motor Cycle* and the Manx M.C.C. for their go-ahead policies. MARCHAND DE VITESSE.

Paris.

### *GOOD TYRE MILEAGE.*

Sir,—May I, through your columns, take the liberty of asking your correspondent, Mr. C. H. Stevenson, what make and size of tyres he has used on his Triumph, the mileage of which he claims as, approximately, 12,000 miles?

Great Yarmouth. BRUNDALL-BUSTER.

### *BLACKLEADING CYLINDERS.*

Sir,—Regarding the article by "E. N. J." which appears on page 426, might I warn your readers that the last paragraph might easily lead them astray, as to blacklead motor cycle cylinders with ordinary domestic blacklead is fatal to proper cooling, a semi-polished surface being obtained.

I speak from bitter experience of this trouble, and might say that blacklead, when once put on, is very difficult to remove.

Possibly the specially prepared blacklead sold for the purpose of coating cylinders is all right, although I have never tried it, as I prefer to run with the cylinders in their natural condition (rough surface). W. D. EDWARDS.

### *MOTOR CYCLES FOR BOYS AND GIRLS.*

Sir,—In reply to Mr. N. Queston Graves, elderly motor cyclist and owner of 1910 sidecar outfit, who narrowly escaped death at the hands of a juvenile, I really must congratulate him on his powers of observation, being able to determine the age of the motor cyclist travelling at this extraordinary speed. E. GORDON BODE.

Sir,—I fully agree with "1922 Triumph 4 h.p. Solo" that the reason for our not seeing more boy and girl motor cyclists is that the financial position of parents nowadays is certainly one calling for economy. I should like to point out, however, that a great many parents, especially mothers, are frightened to let their children get near a motor cycle.

EX-SCHOOLBOY MOTOR CYCLIST.

Margate.

Sir,—I was much interested in Mr. N. Queston Graves's letter. If I might be allowed to state my opinion, I think that all outfits as old as 1910 should be put in a safe place, such as the local museum.

Kent. INFANTILE MONOMANIAC.

Sir,—I was very amused at the indignant letter from Mr. Graves on the subject of "Infantile Monomaniacs." How inconsiderate of that "child" to startle him.

But I really think he exaggerates things a trifle. I should have thought it impossible to have seen the make of a motor cycle when it passed him at 70 m.p.h. (?) on the road; much less ascertain the driver's age. S.J.B.A.

London, S.E.6.

Sir,—I would suggest that as a solution of this difficult question the speed limits for motor cyclists should be restricted to one mile per hour per year of age, thus preventing the 16-year-old from exceeding 16 miles per hour, whilst one of my age and experience would be perfectly at liberty to "put on a bit of a spurt" if he so wished.

London, S.W.15. CENTENARIAN.

Sir,—I cannot help thinking that such letters as those from "Middle-age," "XH-3296" and, lastly, Mr. N. Queston Graves give a very bad impression of the sportsmanship of elderly motor cyclists. The wording of all their letters implies that they consider that they have the first right to the road, merely because they are getting on in life.

If there exists any "first right," surely it is the younger generation who has it, for motor cycling is essentially a pastime for the young and healthy. I would like your younger readers to know that, at any rate, a good many of us who are not youthful any longer do not share such unsportsmanlike views. Is there any logic in "Middle-age's" opinion that a pedal cycle is "good enough" for youths; "let them earn" motor cycles? This in the case where a boy has the chance of participating in one of the most healthy pastimes existing!

One cannot seriously attempt to answer such a letter as that from "XH-3296," who states that he prefers to meet short-sighted, deaf, or crippled motor cyclists to an average healthy boy on a motor cycle.

Again, it is certainly not for a man like Mr. Queston Graves, who is evidently in constant fear of death by heart failure, to give an opinion as to what type of person should be in charge of a motor cycle, while he himself is still "taking the road."

I have always been of the opinion that a certificate of health should have to be produced when obtaining a driving licence, but if such wholesale unsportsmanship exists among elderly motor cyclists, it seems that there should be an age-limit as well, but in the opposite direction to that which your three correspondents advocate.

Lincoln. LIVAN LETLIVE.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle.*

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "Ixion," of *The Motor Cycle.*
Cloth Bound. Price, 5/-. By post, 5/3.
Paper Boards. Price, 2/6. By post, 2/9.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### WELDING OR BRAZING?

Having just had a frame rebuilt, I am claiming that it is absurd to *weld* the tank saddles to the tube, as has been done, for the intense heat applied usually results in fractures immediately after the work is finished. Perhaps you will give me your opinion on the matter, as I contend that the saddles should have been brazed to such a thin tube and not welded.—C.H.S.

We cannot agree with your opinion that it is absurd to weld tank brackets to the frame tubes of a motor cycle, as we know several cases in which this is done; true, brazing is more commonly the method in use, but under proper control the heat of welding should not affect the tube detrimentally.

### CLAIM AGAINST A GARAGE HAND.

Being unable to restart my motor cycle after a stop, I wheeled it to a garage, entering by what appeared to be the principal entrance, and was met by a man in overalls who asked what was wrong. He looked about the machine, and then violently worked the kick-starter without releasing compression, and so broke the gear box. A relative of the proprietor's (being, I understand, in temporary charge of the garage), saw this man start operations, but didn't see me come in, and walked away before the gear box was broken. The proprietors say (*a*) I could recover nothing from the man as he has no money; (*b*) that they are not responsible, saying that I should have come to the office first, that the man only does casual work for them, and that I engaged him independently of them. They offer to do without a profit in mending the gear box. Have I a right to any better compensation?—S.P.C.

It is difficult to imagine that any responsible garage proprietor would employ a man for whom he did not take a certain amount of responsibility; certainly, if the man was employed by them at all, it does not seem feasible that he would be making arrangements in their garage to undertake work for customers on his own account. Whether you can claim any compensation is rather a difficult matter to ascertain; before you could succeed in an action you would have to prove that an employee of the garage (always supposing him to be an employee) was negligent and careless in the manner in which he handled the machine. As the garage people appear to admit some responsibility in the matter by offering to repair the gear box at cost price, we think your best plan would be to take legal advice locally, especially if you are in a position to prove that they have offered certain concessions on account of the damage done to the machine.

## Important Dates.

**Sat., April 22nd—N.-Eastern Centre A.C.U. Open Reliability Trial.**
**Sat., April 29th—S. Midland Centre A.C.U. Open Hill-climb.**
**Sun., April 30th, to Sun., May 7th—Paris-Pyrenees Trial.**
**Mon., May 1st, to Sat., May 6th—Scottish Six Days Reliability Trials.**
**Sat., May 6th—B.M.C.R.C. Members' Meeting at Brooklands.**
**Sat., May 13th—Northern Centre A.C.U. Open Reliability Trial.**
**Sat., May 20th—S.-Western Centre A.C.U. Open Reliability Trial.**
**Tues., May 30th—Junior Tourist Trophy Race.**
**Thurs., June 1st—Senior Tourist Trophy Race.**
**Fri., June 2nd. and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**
**Sat., June 10th—B.M.C.R.C. Open Meeting at Brooklands.**
**Sat., June 17th—Yorkshire Centre A.C.U. Open "Colonial Trial."**
**Sat., June 17th—Ealing and Dist. M.C.C. 200 Mile Sidecar Race. Brooklands.**
**Fri., June 23rd. and Sat., June 24th—Irish Twenty-Four Hour Open Trial.**
**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**
**Sat., July 1st—East S. Wales Centre A.C.U. Open Speed Trials.**
**Wed., July 5th—Eastern Centre A.C.U. Open Speed Trials.**
**Wed., July 12th—French Grand Prix.**
**Sun., July 23rd—Belgian Grand Prix.**
**Fri., July 28th, to Mon., July 30th—Anglo-Dutch Trial in Holland.**
**Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.**
**Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.**
**Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.**
**Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.**
**Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.**
**Sat., Sept. 23rd—500 Mile Race at Brooklands.**

### CONSUMPTION OF 5-6 h.p. TWIN.

I have a 6 h.p. Clyno sidecar, and want to know what is considered a fair average of mileage obtainable from a gallon of petrol. At present I am not getting more than an average of about 45 m.p.g.—E.R.

From a machine of the type you mention 50 to 55 m.p.g. should be obtained if the engine is in good tune, but as possibly your machine is an old one, 45 m.p.g. is not unreasonable.

### LACK OF SPEED.

(1.) On a recent journey in the West Country I covered 600 odd miles on my 1920 model two-stroke, and on the return trip, being anxious to reach the town where I intended stopping for the night, I increased my speed a little above the average. After about five miles of this speeding, a terrific knock developed in the cylinder, and I had to slow down, but found I could reach the town by going slowly. I had given the engine plenty of oil so as to be on the safe side. The next day the knock was present at any speed over about 15 m.p.h. When I got home I dismantled the engine and found a lot of carbon, particularly on the inlet side of the piston head, but the rings were quite free. Thinking I had cured the trouble by decarbonising, I subsequently set out for a 50-mile run, and was surprised to find the knock return at the end of the run. Can you explain this, or suggest a remedy, please? (2.) In connection with the above, I was using an aero type plug. If this is not considered suitable, can you suggest any other? (3.) I should like to point out that I have never been able to average more than 20 m.p.h. at the best. When I see that two-stroke machines attain 32 to 37 m.p.h., I cannot understand my machine's lack of power. I am not a speed hog, but should like to get 25 to 30 m.p.h. Can you help me, please?—J.S.R.

(1 and 2.) The knock is probably due to pre-ignition, and we should recommend you to try another plug; although aero plugs are excellent for many engines, they are not suitable for all two-strokes. It may be that the particular plug you have has become faulty owing to carbonised or burnt insulation. (3.) If you

n average 20 m.p.h. over a long journey e speed of your machine must be fairly od. If you mean that 20 m.p.h. is the st speed which you can generally attain, is certainly low. You must recollect, wever, that the majority of small two-roke machines are not built for high eeds. If all engine details are in order, y advancing the ignition a little.

## XPERIENCES WANTED.

*Readers' replies to questions published der this heading should be addressed o The Editor, "The Motor Cycle," orset House, Tudor Street, London, C.4, when they will be forwarded rect to the querists concerned. Requests r experiences should be accompanied by stamp.*

"A.R.C." (Sunderland).—8 h.p. 1921 nfield two-seater sidecar: W.D. plugs, nac carburetter.

"W.C.K." (Eltham).—Morgan, family odel: Air or water cooled, Binks or her carburetter, gear ratios.

"L.W." (Leicester). — 2¾ h.p. 1922 ulson-B: Reliability and handling of ring frame. Also 2¾ h.p. Rex-Black-rne, all chain.

"J. DE W." (Lelant).—3 h.p. Beard-re-Precision two-stroke with sidecar in ly country.

"A.W." (Mapplewell).—A.B.C.; general performance; obtaining spares.

"M.W." (Otley).—Proud variable jet.

"E.T." (Bury).—Hood and sidescreen A.J.S. sidecar; shelter provided.

"R.D." (Edinburgh).—A.B.C. (latest odel); mechanical pump; reliability.

"W.S." (Bridge of Earn).—Orbit en-nes; Motorities home-assembly sets.

"K.M." (Isle of Mull).—Scott Sociable d Seal two-seater; general remarks, o any wear at joints of Scott chassis ter long use.

"J.W.V." (Towcester).—Binks carbur-er on 3½ h.p. M.A.G. engine.

"H.S." (Sheffield)—Jet sizes in Binks 4 h.p. Douglas outfit.

## ECOMMENDED ROUTES.

ARLINGTON TO WOLVERHAMPTON.—G.E.H.

Darlington, Scotch Corner, Catterick, eming, Baldersby Gate, Ripon, Ripley, rrogate, Spofforth, Wetherby, Aberford, otherton, Ferrybridge, Doncaster, Balby, adworth, Tickhill, Oldcoates, Carlton, rksop, Whitwell, Barlborough, Staveley, imington, Chesterfield, Baslow, Edensor, atsworth Park, Beeley, Rowsley, Matlock idge, Matlock Bath, Cromford, *via* llia, Grange Mill, Ashbourne, Clifton, dbury, Draycott, Yoxall, Kings Bromley, chfield, Muckley Corner, Walsall, olverhampton. Approximately 197 miles.

EYBRIDGE TO GREAT MALVERN.—C.E.H.

Weybridge, Chertsey, Staines, Wind-r, Eton, Salthill, Maidenhead, Henley, ettlebed, Benson, Shillingford, Dor-ester, Nuneham Courtenay, Littlemore, xford, Woodstock, Chipping Norton, oreton-in-Marsh, Bourton-on-the-Hill, ockley, Broad Campden, Chipping mpden, Aston-sub-Edge, Weston-sub-dge, Willersey, Broadway, Evesham, ershore, Defford, Baughton, Upton-on-evern, Hanley Castle, Great Malvern. pproximately 119 miles.

(2–8)

### Carburetters under Official Observation.

In the recent A.C.U. observed test of a Norton sidecar outfit and a Levis lightweight, carried out in Devon and Cornwall, Cox Atmos carburetters were used on both machines.

### Useful Instruction Booklet.

A second edition of "Martinsyde Maxims," giving valuable information to users of Martinsyde motor cycles, to whom it is issued free of charge, is now available from Martinsyde, Ltd., Woking, Surrey.

### Oil for Nothing.

To any motor cyclist who would like a sample tin of Prices' oil, Prices' Co., Ltd., Battersea, London, S.W.8, will issue a voucher on application, which on presentation to any motor agent will be exchanged for a quart tin of Prices' oil, free of charge. The company only ask that the applicant for the free tin should furnish particulars of the machine and state that he has had no previous experience of Motorine or Huile de Luxe.

### T.T. Souvenir.

Last year the Leicester Rubber Co., Ltd., Leicester, published a most useful little booklet entitled "The John Bull T.T. Souvenir." The 1922 issue is in course of preparation and will be ready abont May 1st; it gives a complete history of the T.T. races, full information concerning the course, local regulations, fastest laps, a speed table, and a list of motor cycle records.

### Bulk Fuel Storage at Brooklands.

Two underground tanks and two Bowser delivery pumps have been installed at Brooklands by the British Petroleum Co., Ltd.

### Tyre Price Reduction.

Dominion motor cycle tyres have been reduced in price by The United States Rubber Co., Ltd., 47-48, Farringdon Street, London, E.C.4.

### Found on the Road.

A tool-roll was discovered on the London-Brighton road at Patcham on April 9th by Mr. J. E. Hay, cycle dealer, 34, Kensington Gardens, Brighton.

### Prices of 1922 Models.

The Sun Vitesse range for 1922 is priced as follows: 247 c.c. two-stroke, two-speed, chain and belt, £57 15s.; three-speed, all-chain, £72 9s.; 293 c.c. four-stroke (J.A.P.) two-speed chain and belt, £66 3s.; three-speed all chain, £78 15s. In our Spring Issue Buyers' Guide it was also not made clear that the 2¾ h.p. and 3 h.p. Raleigh models at £68 and £73 respectively had two-speed gears; for three speeds £5 extra is charged.

### Catalogues Received.

The Hobson Manufacturing Co., Ltd., 29, Vauxhall Bridge Road, London, S.W.1. A catalogue of accessories, including Hobson and Pognon plugs, the Hobnova plug cleaner, and plug box spanners.

The Ruby Cycle Co., Ltd., Moss Lane, Altrincham, Cheshire. A catalogue of Royal Ruby motor cycles, illustrated by half-tones and sketches.

The Capac Co., Ltd., 18, Bruton Place, New Bond Street, London, W.1. A leaflet describing Capac single-lever carburetters, and embodying instructions for fitting.

Murden Page, Ltd., 21, Mortimer Street, London, W.1. Electric and mechanical motor cycle horns, nickel steel valves, spanners, and compression taps.

SPRING! April snow storms and biting east winds stopped many a hardy motor cyclist but not enthusiastic lady competition riders. Mrs. Hardee (8 Matchless sidecar) followed by W. Julian (2¼ Levis sidecar) in the "Colonial Section" (? Labrador brand) of the Surbiton Club's recent event.

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### Considering the Amateur Road Race.

To-morrow the draft rules for the proposed Amateur Road Race in the I.O.M. come before the Competitions Committee of the A.C.U., when it is hoped that the necessary permit will be forthcoming.

### Yorkshire Enterprise.

Through its secretary, Mr. W. A. Dovener, the Bradford M.C. and L.C.C. has already made application for the 1922 edition of *The Motor Cycle* film.

### For the Next East Midland Trial?

One day last month an enthusiatic amateur rider, Mr. A. R. Linsley, of Nottingham, made a successful attempt on an ex-Army 6 h.p. A.J.S. up a track over the Peak in Derbyshire, the course consisting of the river-bed at the bottom of Jacob's Ladder, and then up a precipitous track, with several severe corners and an appalling gradient.

### Very Much Split Seconds.

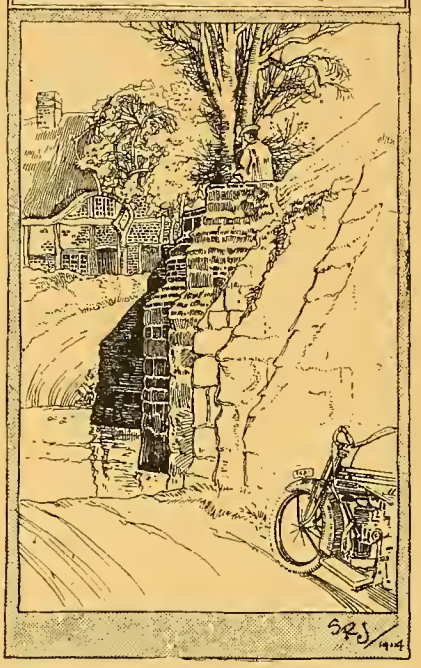
The resolution of the Timekeeping Sub-committee of the A.C.U. to the effect that short-distance record times must be taken up to 1-20sec. largely owes its origin to certain tests made by the Royal Air Force during the war, when it was found that that particular fraction of a second was the time taken by a normal individual to transmit action from the brain to the hand.

### Fair Lady and Freak Hill.

Mere male readers may be alarmed to hear that one of the only three clean ascents at a first attempt of a freak hill included in the Liverpool M.C.'s opening run was made by a lady motor cyclist, Miss Cottle, whose driving skill was, incidentally, one of the outstanding features of two of last year's open trials in North Wales. There were 92 entrants.

### Testing a Big Single Two-stoke.

In order to prove that overheating under strenuous hill-climbing conditions is not a fault of the 499 c.c. Dunelt two-stroke; W. Chase, of Newcastle-on-Tyne, recently made twenty-five non-stop ascents of Clara Street, a notorious gradient of 1 in 6 in that city, having in addition to the sidecar passenger, another adult on the carrier of the machine. The test was successfully accomplished under A.C.U. observation.



### Free Transport for a Scottish Tour.

Any reader, prepared to pay his own expenses, who would like a sidecar seat on a competing machine in the Scottish Trials, should communicate with Mr. F. W. Becker, 3, Booth Fields, Foleshill, Coventry, the McKechnie-Victor driver.

## Special Features.

EASTER EVENTS ILLUSTRATED.
IN THE HEBRIDES.
THREE MILES A PENNY.

### Rudges in Competition.

This year the Rudge has been a familia name in most of the big competitions and as is evident from a list of entries or in tended entries for forthcoming events, i will continue to be so. Those who wi ride Rudges in trials in the near futur include G. W. White, R. R. Grindlay and R. Carfrae.

### French Assault on British Market.

News that the 3½ h.p. Gnome Rhône motor cycle is eventually to b placed on the British market is interesting, in view of the fact that one of thes machines completed the 2,334 miles o the Tour de France without the loss of single mark, tieing with the A.B.C which hails from the same factory. Th designer of the Gnome et Rhône is a Englishman, Mr. K. Bartlett.

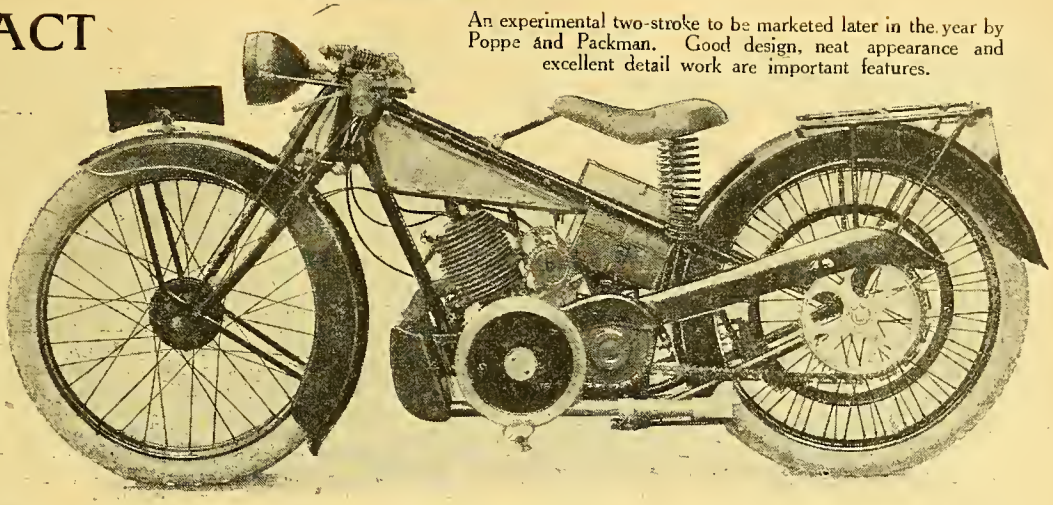
### Switzerland as a Trial Ground.

In its natural characteristics no coun try in Europe is better situated for motor cycle trials than Switzerland. The length of the hills are in themselves an excellen test, the long descents are trying to th brakes, and if steep gradients are require it is not difficult to find them. Man manufacturers might profit by the report of an experienced tester turned loose i the Alps for a month or so, with instruc tions to cover 5,000 miles.

NOT 1822 BUT 1922. This disgraceful stretch of highway is on the main Taunton-Minehead road, and should be avoided if possible, especially by solo riders at night time. Readers journeying from Taunton to Minehead this Easter are advised to take the road round Bridgwater.

# A COMPACT TWO-STROKE.

## Duplex Loop Frame, All Chain Drive and Detachable Wheel, Embodied in the New White and Poppe-Engined Lightweight.



An experimental two-stroke to be marketed later in the year by Poppe and Packman. Good design, neat appearance and excellent detail work are important features.

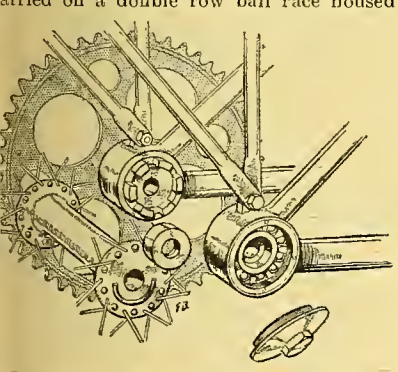
QUITE one of the most interesting machines which we have been able to examine and handle is now undergoing preliminary road tests in an experimental form.

Originated by Mr. E. Poppe, it will be produced in conjunction with Mr. G. Packman, of Rochester, and it is hoped that it will be ready for the market in the autumn of the present year. Though in its present form the machine differs somewhat from the production model, the essentials are embodied and are undergoing prolonged tests.

A White and Poppe two-stroke engine of 250 c.c. (previously described in these pages) is fitted, and the gear is a Sturmey-Archer lightweight three-speed, with clutch and kick-starter. It is intended that these two parts shall be embodied in a single unit, the Sturmey-Archer gear parts being fitted in an extension of the crank case. The engine is to be increased in bore so as to bring it within the 350 c.c. class, and a mechanical pump will supply oil from a pump between the crank and gear box partitions.

### Power Unit Moved for Chain Adjustment.

The whole power unit is mounted slidably on the duplex frame, and it can be moved to provide adjustment for the rear chain. A very unusual feature is incorporated in the final drive, for the rear sprocket lies outside the chain stay, and is carried on a double row ball race housed in the rear fork end. A similar ball bearing is mounted in the opposite fork end, and the quickly detachable wheel has no hub bearings, but is held in place by a central knock-out spindle and driven by a dog clutch. A refinement not without importance lies in the provision of a semi-circular lip on the wheel hub which locates the distance washer (necessary for wheel withdrawal) and consequently facilitates assembly.



Details of the rear wheel assembly; the semi-circular projection on the hub is used to locate the distance washer.

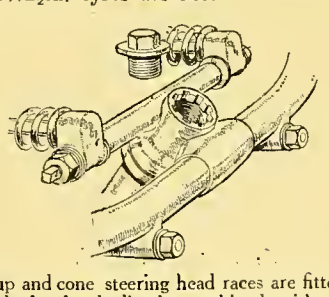
The standard machine will be equipped with the B.T.H. Sparklight ignition and lighting set, the accumulator box being fitted under the saddle; pannier tool bags are neatly housed below the duplex tubes from head lug to rear axle. Brampton forks are used, cup and cone bearings being employed in the steering head, while the normal head clip is replaced by a combined cup, spring buttress and handle-bar lugs splined on to the steering column, and held down by a special set pin.

### Complete Enclosing of Mechanism Possible.

By a clever piece of design (not shown in our illustrations) the whole engine and its accessories can be closed in by side shields, which are neatly fastened to the tank. These side pieces splay outwards at the front, and they are curved round to form leg shields, which help to deflect air over the engine and keep the rider free from oil as well as mud, yet they can be detached in a few seconds.

Even on the experimental model the fittings are practical and excellent. A large sized Webb front brake is employed, and both mudguards are fully valanced and supported by flat stays, but the present internal V rear brake will be replaced by an expanding brake within the rear sprocket. Roughly, the frame may be described as consisting of six tubes, two from the head to the rear spindle, two from the head passing downwards under engine and gear box and extending rearwards to form chain stays, and two light tubes bolted in and taking the place of the saddle tube. The seat itself is hinged from a point on the frame, well in front of the saddle peak, and is supported on the rear by a pair of very long compression springs. Complete with 26in. × 2½in. tyres and B.T.H. lighting set, the machine scales 185lb., and it is hoped that it may be marketed at about £65.

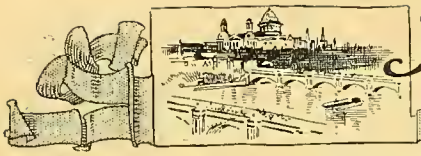
A short run on the road convinced us that the machine is thoroughly comfortable, and steers perfectly at speeds over 10 m.p.h.; at slower speeds an improvement might be made, and the matter is receiving attention at the moment. A large silencer directly in front of the frame member successfully reduces the exhaust noise, and other mechanical noises are slight. The riding position is excellent, as the seat is well in front of the rear wheel and so close to the front that the forward swept bars come into a natural position. It is difficult to realise the size of this very compact little machine, but as a guide to proportions when examining the illustration it is well to remember that 26in. × 2½in. tyres are fitted.



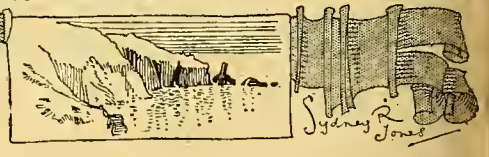
Cup and cone steering head races are fitted, and the head clip is combined with the handle bars and spring fork buttress, the whole being carried on splines.

## INCREASE IN EXPORTATION OF MOTOR CYCLES.

A SATISFACTORY feature in the Board of Trade returns for March is the substantial increase in value of machines and accessories exported. In February their value was £54,849, but last month this figure was increased by £19,049. Even this amount falls short by the big sum of £96,429 when compared with the March figures of 1920, but still to find our overseas trade on the up grade, no matter how slight, shows that the bed rock of trade depression has been reached, and that a trade revival is imminent.



# The LONDON LANDS END TRIAL



## Porlock and Beggar's Roost Try the Passenger Machines. Rain and Head Winds Test Endurance of Competitors. 212 Motor Cyclist Starters, 43 Retirements.

GALES and gradient proved uncommonly difficult obstacles in this year's London—Land's End Trial, the record-breaking Eastertide event of the M.C.C. to decide the soloist and sidecar driver to hold the President's and Captain's Cups respectively for another twelve months.

Not only was Beggar's Roost included in the stiffened edition of last year's route as a climax to a very possibly almost impassable Lynton, but the "O. i/c. Gales" apparently went holiday-making, leaving his south-west army to wage war against the luckless Land's End men. Rain provided the finishing touch—stinging rain which was almost indistinguishable from hail.

Rumour had it, too, that the eight-mile section from Beggar's Roost to Simonsbath was one of the (hundred odd) worst roads in the country, but it was so thoroughly snow-bound that it was wisely decided at the eleventh hour to divert the competitors by a less exciting route.

### More Main Road Checks.

Little incident of note relieved the monotony of the long procession as it wended a fairly straight-forward way from Slough, through Maidenhead, Reading, and Newbury to the first check at Hungerford. Incidentally, there were more checks this year, but nobody grumbled, the general opinion being that, within limits, the more the merrier.

Through Savernake Forest the going was rough, but this was expected. The gale that met the earlier solo men after turning off for Devizes was not. Gradually its intensity increased, or so it seemed, and rain came more heavily—sometimes dead ahead, sometimes half-left, but never behind.

Frome, Shepton Mallet, and Glastonbury came to be regarded as milestones in the fight for Bridgwater, and 90% of the riders pondered the usual problem at this stage—why on earth were they there?

At approximately half-past four "No. 1," F. A. Longman (498 Ariel), entered Bridgwater for the usual breakfast stop, which almost as truly might be called supper, at the White Hart Hotel. Two items only call for comment here: there was an extraordinary number of fully authenticated but quite impossible-to-be-true stop-press rumours about all three test-hills, and, secondly, the washing arrangements were greatly improved on those of last year.

### Timed Climbing Test on Porlock.

Porlock, which came next, may always be relied on to relieve one or two of their gold medals; this year also it was again the deciding factor for the trophy awards—nearest to twenty miles per hour up the first mile winning—and in consequence anxiety bred failure in several cases. As a hill it is the least difficult of the three included in the trial.

Porlock's two hairpin turns of terrifying steepness formed the first real "stumbling block" in the course of the trial.

On Saturday the surface of soft red clay and loose sharp stones was adversely affected by the previous heavy rains, and many of the competitors failed on, or just after, the first bend.

Some stopped at the first corner by taking the turn too close in; there the road surface was very bad. Attempting the turn too fast and skidding into the outside ditch was also the cause of several failures at this point. Some excellent cornering, however, was witnessed, both by the solo and sidecar men.

Probably because of their low bottom gears many of the lightweight riders took the first turn in splendid style, notably S. G. Wooldridge (349 A.J.S.) and A. R. H. Stewart (348 Raleigh). F. E. Salter (496 Zenith-Bradshaw) had rather a bad skid, and fell just before the turn. E. S. Burnett (750 Raleigh) and R. Newitt (497 Douglas) made very good climbs, as did E. H. Williams (499 Triumph).

C. H. Mocatta (349 A.J.S.) skidded badly into the ditch, and H. Robinson (345 Wooler) stopped after taking the first turn in good style, and had to be pushed to restart, whilst T. E. Pantard (250 Trump-Jap) failed just round the bend.

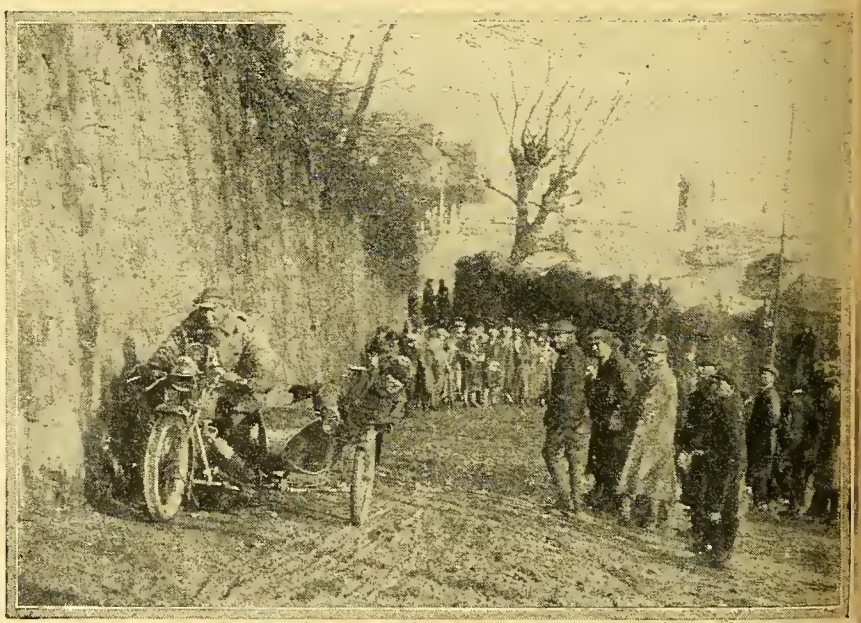
### Skids and Baulks.

Much excitement was caused when W. H. Julian (996 Matchless sc.) took the turn too fast and skidded across the road. In the haste to get away again he baulked two other Matchless sidecars (G. Nott and D. S. Parsons), which, however, just managed to scramble through the restricted road passage.

Ivan P. Brettell (370 Connaught sc.) made a very clean ascent as far as could be seen—sailing round the bend very smoothly.

C. W. Vallings (499 Dunelt sc.), A. C. Maskell (996 Matchless sc.), P. Cunningham (555 P. and M. sc.), and William King (989 Harley-Davidson sc.) also made splendid climbs.

A 600 c.c. Beardmore-Precision outfit driven by A. G. Cocks took the turn well, though too wide; and W. P. Brandon



Well round the acute bend at the foot of Lynton, J. Wallis (688 Coventry-Victor sidecar) opens out for a successful climb.

Two 678 c.c. Martinsyde outfits, piloted by the Bashall brothers, passing through the quaintly named village of Indian Queens.

T. Weaver (796 Sirrah sidecar) nearing Truro during a brief respite from the storm

(550 Triumph sc.) stopped right on the bend and caused an exciting obstruction, involving three other machines. G. R. Claridge (550 Triumph sc.) made an outstanding climb.

### Cycle Cars on Porlock.

Most of the three-wheeled cyclecars managed the ascent remarkably well. W. H. Elce (1096 Morgan), F. W. Dame (980 Morgan), H. F. S. Morgan (975 Morgan), and F. Spouse (980 T.B.), all climbed excellently, but H. W. Holmes, driving a Grand Prix model Morgan, took the first turn in too dashing a style, and made a most spectacular skid on the loose surface. As a result his rear tyre burst with a loud report, but, undaunted, he roared away up towards the second bend on the rim.

### Between Somerset and Devon.

The road over Exmoor and down Countisbury hill to Lynmouth had only been opened on the previous week-end after the recent heavy snowstorms in the neighbourhood, but its general condition was by no means worse than usual; lingering remains of once 6-feet-deep snowdrifts indicated what might have been had Easter been a little earlier this year.

Most of the riders used their engines as brakes on Countisbury, and oiled plugs were not uncommon at Lynmouth.

### Snares of Lynton Hill.

When the surface is out of condition there are three bad spots on Lynton Hill. The first is at the first corner, where it is well-nigh fatal to cut in on the inside; the second is a steep, loose patch about 100 yards higher, and the worst is a stiff pull about 200 yards beyond. Recent heavy weather on this occasion rendered the hill at its worst, though it needed the advent of the sidecar machines and cars to show how bad matters might be, for almost without exception the soloists made good climbs. This, of course, was to be expected, as the only moderately rideable path is close to the offside wall, and is very narrow.

### Good Performances.

First man up, in good style, was F. A. Longman (498 Ariel). E. Atkins (498 Ariel) had to indulge in foot work, whilst J. S. Austin (496 Scott-Squirrel) climbed well, although his engine appeared to be misfiring. E. A. Collum (596 Indian Scout) went up steadily but quietly, and noticeably good performances on and after the first corner were made by J. Richardson (498 Lea-Francis), V. Gayford (500 Zenith-Bradshaw), R. Newitt (497 Douglas), G. O. Ford (500 Zenith-Bradshaw), and G. Kuhn (245 Calthorpe). S. Hancox had a sidecar attached to his 500 c.c. Zenith-Bradshaw, although listed as solo; he created a sensation by coming up to the first corner at a great speed, but he cut in too fine and stopped round the bend, getting away again in the end. W. Henry Wells (398 A.B.C.) narrowly escaped a baulk from another machine, but neatly cut in and managed to pass above the first corner. Praise must be, and was on the spot, awarded to the veteran F. W. Applebee (211 Levis), who with his engine misfiring slightly, skidded on the corner, used

At one period something approaching chaos reigned on Beggar's Roost. F. W. Giles (800 A. J. S. sidecar), in the left foreground, is making a brilliant get-away after a bad baulk.

Two solo riders making light of Beggar's Roost—H. A. Davies (498 Ariel), leading, and C. H. Mocatta (349 A.J.S.)

his feet to recover, and got away again very well. C. H. Mocatta (349 A.J.S.) narrowly missed being baulked by a cart. B. N. Taylor (349 Hagg Tandem) arrived very late, took the corner too fine, stopped, and eventually went up running beside his machine, which was not an easy task.

### Sidecarists not Happy on Lynton Slime.

When the sidecar machines came, the fun began. Many of the solos took the hill as if there was nothing in it, engines by no means extended. All the wise men hugged the right-hand wall as they went up.

Because of the stops and baulks, particularly on the upper portion of the hill, it was almost impossible to say who did, or might have done, well, and the promoters of the trial will have some difficulty in sorting things out to universal satisfaction. It was noticeable that, despite these troubles, the competitors showed the utmost good humour, whilst the marshals did their best to keep track of things and to help those who needed it. The cause of the trouble, of course, was the unutterably loose surface made worse by recent showers.

### One Accounts for Many.

The beginning of one turmoil was the failure of A. J. Agg (799 A.J.S. sc.). He baulked A. Greenwood (976 Brough-Superior sc.), who passed it on to W. H. Bashall (678 Martinsyde sc.), and then J. T. Bashall (678 Martinsyde sc.), G. Baxter (678 Martinsyde sc.), B. E. Belfield (989 Harley-Davidson sc.), T. H. Weaver (796 Sirrah sc.), and A. H. Carnt (532 Scott-Squirrel sc.), all became involved. This was typical of the day.

### Good Sidecar Climbs.

The following can be picked out as making good climbs by skill, judgment, or luck :—A. H. Nelson (550 Triumph sc.), who drove splendidly; S. Julian (996 Matchless sc.), F. J. Watson (994 Ariel sc.), J. Wallace (688 Coventry-Victor sc.), J. Graham (996 Matchless sc.), B. S. Allen (996 Matchless sc.), T. J. Ross (996 Matchless sc.), and R. C. Boxer (996 Matchless sc.). So many were the incidents, so rapid the action, so thrilled the onlookers, that it was almost impossible to keep track of all the happenings. At least 32 failed, and at least 20 more stopped through baulks, which were extremely prevalent.

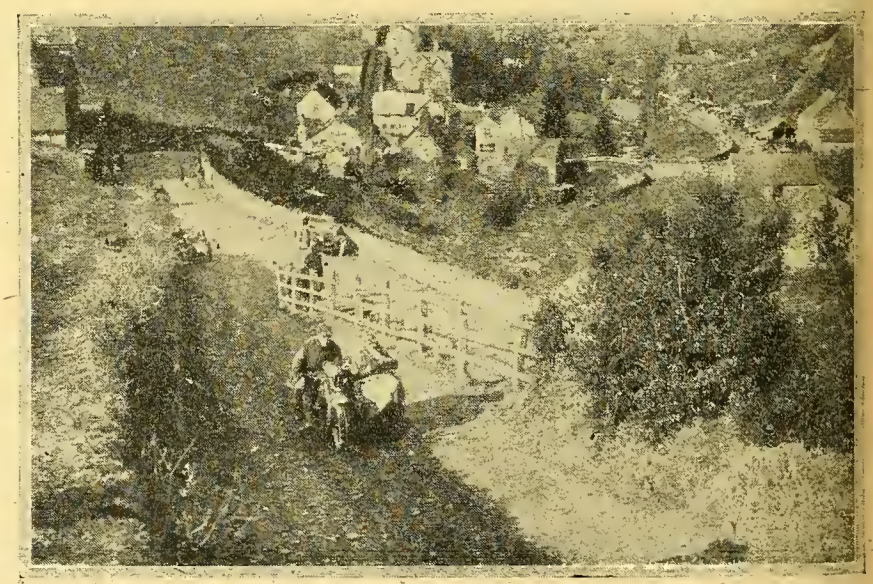
Not much better luck befell the three-wheelers. A. G. Gripper (1096 Morgan) came to grief on the corner; F. W. Dame (980 Morgan) failed; but W. H. Elce (1096 Morgan), F. Sponse (980 T.B.), and H. F. S. Morgan (975 Morgan) all did well on the first corner and beyond.

### Beggar's Roost—the Third Test Hill.

Thence followed the culminating ascent of the Devonshire Hills, namely, Beggar's Roost, on the edge of the village of Barbrook Mill. From the contour survey exclusively published in last week's issue of *The Motor Cycle* it will be seen that the steepest section is 1 in 3.64, and for the whole three-quarter mile length of the hill the gradient averages about 1 in 7. Spectators gathered in the early hours—the first man was due at 7.48 a.m.—some keen enthusiasts being content to munch sandwiches in lieu of breakfast, which some of the Lynmouth district hotels fought shy of providing so early.

It was fine with a strong wind blowing up the hill. F. A. Longman (Ariel), last year's Jarrott Cup winner, led the way in company with E. Pond (550 Triumph) and P. L. Wills (499 Rudge), followed by an official Morris car piloted by L. A. Baddeley.

Belfield (398 A.B.C.), C. Wheeler (481 Scott-Squirrel), and P. H. Jones (499 Sunbeam), were next, and so far all got up comfortably. E. W. Spencer's 497 c.c. Douglas toyed with the precipitous gradient, whilst O. S. Bridcutt (499



The commencement of Beggar's Roost and the main road, on the right, by which competitors rejoined the route after completing the climb. S. H. Farley (1170 Henderson sidecar) is the rider in the foreground.

L. A. Welch (292 O.K. Junior) zig-zagging up Beggar's Roost while D. G. White (347 G.R.I.), on the worst side of the road, finds it necessary to dismount.

Dunelt) slewed around in the road and had to touch with his feet, but kept going, nevertheless. E. Atkins (498 Ariel) footed, but re-started and finished well. G. Segrott, on a similar mount, was slow and sure. E. J. Keyhoe (499 Rudge) charged the gradient with his feet dangling, and disappeared at a rare bat; J. A. Newman (497 Douglas) was good, but his right eye was blackened, apparently through a fall.

### Some Fine Solo Ascents.

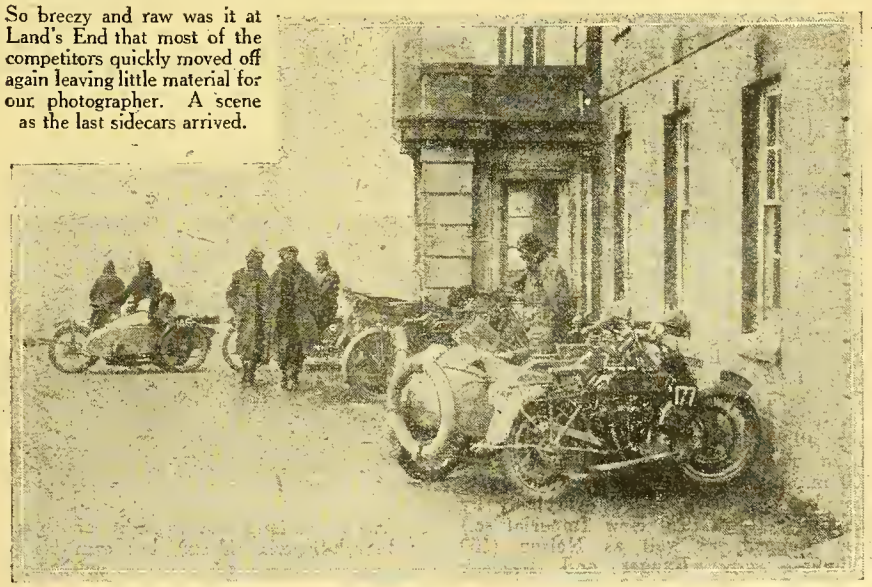
Then a roar, and two riders in close company charged round the bend at speed—they were G. Brough and S. Ratcliffe (976 Brough Superiors). A. C. Rhodes (499 Triumph) made a neat climb, also P. Street (499 Sunbeam), T. L. Daniels (595 Douglas), and H. C. Nias (498 Ariel). Austin's 496 c.c. Scott was misfiring, and he stopped and elected to retire. One of the I.O.M. T.T. Rovers, ridden by L. N. Stannah, stopped in front of C. Bourlet (498 Ariel), but the latter got up by dextrous driving. C. Dickinson, on another 498 c.c. Ariel, climbed faultlessly, also E. A. Collum (596 Indian), W. G. Boyer (490 Norton), and H. Nicholson (496 Martinsyde). J. Richardson (498, Lea-Francis) was in excellent fettle, notwithstanding the all-night gruelling, but B. H. Brayne (548 Blackburne) only just got up, hindering V. Gayford (496 Zenith-Bradshaw), who, however, made a clean ascent. R. V. Saltmarsh (584 Harley-D.) and S. Easton (398 A.B.C.) did well; J. G. Boorer (678 N.U.T.) was slow but sure; and then three made clean climbs in close company—W. D. Pugh (496 Zenith-Bradshaw), E. Gifford (496 Martinsyde), and A. Symes (678 Martinsyde). S. Hancox's (496 Zenith-Bradshaw) sidecar stopped low down and proceeded to push—a foretaste of what might happen to the passenger machines.

### Gaps in the Ranks.

So far the road surface had quite well survived the biggest crowd of motor cycles ever to climb Beggar's Roost, but the lower reaches were strong. G. S. Green's 532 c.c. Scott came to a standstill on the very crest of the crucial stretch; J. O'Sullivan's 1170 c.c. Reading Standard was surprisingly slow, but good notwithstanding. Then a long wait, which suggested "fun" on Lynton, the preceding climb, only 1½ miles away. F. V. Edwards' 557 c.c. B.S.A. stopped low down; M. Pearson's 550 c.c. Triumph was good, also J. Eddy's 499 c.c. Rover, E. Howard's 499 c.c. Sunbeam, and R. Roberts' 550 c.c. Triumph. Grose added to A.B.C. laurels, and was followed by a batch of successful men, Hardwick (N.U.T.), Cuffe (Metro Tyler), Charlesworth (Zenith), Harveyson and Marks (o.h.v. Triumphs), Hadley (Rudge), Walter (Zenith), and Troughton (XL). The sun bothered the riders, as it shone straight into their eyes during the ascent. After Pugh (499 Triumph) had passed at speed there was another long wait until F. Salter (496 Zenith-Bradshaw), P. Pike (490 Norton), and G. Ford (496 Zenith-Bradshaw) came up well. E. Foster (750 Raleigh) hesitated after a swerve, but recovered well, and afterwards the following showed up conspicuously: E. Burnett (750 Raleigh), J. Biss (630 Norton), Williams (499 Triumph), Sprosen (293 Connaught), R. Newitt (494 Douglas), H. Gibson (348 Raleigh), T. S. Sharratt (349 A.J.S.), A. M. Knill (348 Raleigh), Wells (398 A.B.C.), and Baxter (247 Radco). G. Richardson (348 Raleigh) was slower than his confrères. Lewis (349 Beardmore-Precision) made a neat ascent; Thomas (349 Hagg Tandem) footed vigorously, but kept going. Hemy (349 A.J.S.) was good, also Davies (498 Ariel) and Mocatta (349 A.J.S.), who were noticeably faster than the forerunners. White's 347 c.c. G.R.I. stopped in the stones, Welch (292 O.K. Junior) made a fine climb. Greathead (348 Ivy was good, but Kuhn and Heller on 245 c.c. Calthorpes footed. R. Richardson (349 Alecto) stopped, whilst Wooldridge (349 A.J.S.) and Stewart (348 Raleigh) were fast. McLachlan (349 A.J.S.) touched with his feet, needlessly one thought; Guthrie (Diamond, with 349 c.c. Barr and Stroud engine) was very good.

### One Way of Clearing the Course.

Youngs (292 O.K. Junior) raised a laugh among the crowd by steering straight for a spectator sitting on the bank, who promptly fell on his back with his legs in the air.



So breezy and raw was it at Land's End that most of the competitors quickly moved off again leaving little material for our photographer. A scene as the last sidecars arrived.

On Bodmin Moor a few minutes after one of the worst storms of the year. W. J. Barker (1170 Henderson sidecar).

### Sidecar Observations.

Then the sidecars started in earnest, W. A. Fell-Smith (976 Brough-Superior sc.) forming the vanguard, and incidentally clearing the over-zealous spectators who meandered aimlessly in the road while natural banks awaited them. Clifford Wilson (653 Quadrant sc.) stopped, but was able to see Pidgeon on a similar outfit go up well. More sidecars followed, Ross and Boxer among a remarkably big Matchless representation, doing well. Watson (994 Ariel sc.) got over the critical 1 in 3.64 by vigorous bumping on the saddle.

### Two Star Climbs.

But the star ascents among the sidecar competitors we credited to Bridgman (998 Indian), and Marvin (987 Brough-Superior). Curiously enough, they were in close company, and their fast ascents thrilled the onlookers.

"Hard luck!" exclaimed the onlookers as Harris (550 Triumph sc.) came to a standstill after manfully breasting the steepest bit; Glendinning's 998 c.c. Rex outfit stopped at precisely the same spot. Tait (980 Brough-Superior sc.) stopped with his driving-wheel churning up the stones. Davidson's 596 c.c. Indian Scout outfit repeated the performance, and he burnt out the clutch in attempting a restart. White (996 Sunbeam sc.) stopped, and then perfect chaos prevailed as a bunch of sidecarists in close company attempted the hill. Some were baulked, and the officials took their depositions in the midst of the climb instead of clearing the course for the next men. Mackenzie (745 Humber sc.), Guiver (996 Matchless sc.), Cocks (598 Beardmore-Precision sc.), Attwood (548 Hawker sc.), were all at one time at a standstill within a space of twenty yards. The 100 m.p.h. exponent—C. G. Pullin (749 Douglas sc.) disappointed everybody by stopping; Hann (980 New Imperial sc.) also stopped, as well as Nelson (550 Triumph sc.). Ranger and Peacock (Matchless sc.) just scraped up; one noticed that most of this team had Parsons chains on the driving wheel. White (800 A.J.S. sc.) stopped, due to wheel spin; Nott (Matchless sc.) was slowly overhauled by Parsons, who actually struck Nott's stand, but managed to keep going; Jones (996 Matchless sc.) stopped low down the hill, but Wood (633 Norton sc.) got over the steep pitch and then unaccountably failed.

The sidecar men found Beggar's Roost a tough proposition, and another bunch of machines were strewn about the hill at this point awaiting assistance from willing helpers. W. H. Bashall (678 Martinsyde sc.) was baulked at this point, but restarted with a third passenger on the carrier and went up well. Giles (800 A.J.S. sc.), who had found his progress barred by a stranded Matchless and Henderson, made a perfect restart, and climbed the hill faultlessly. Greenwood (956 Brough-Superior sc.) followed Bashall's example, whilst Hardee and Ellis (Matchlesses) restarted at the point they were baulked and climbed the remainder of the hill excellently. Claridge (550 Triumph sc.) and Carnt (532 Scott sc.) were assisted, but C. R. Collier (993 Matchless sc.) made no mistake. Wheelspin brought Walker (770 B.S.A. sc.) to a stop. Bad luck again dogged the Martinsyde, for Baxter was badly baulked by three stopped sidecars; he managed to worm his way around them all, however, and got up amid applause; Perrey (770 B.S.A. sc.) made a similar performance but unluckily stopped, while Bird (770 B.S.A. sc.) simply had no opening left for him.

### A Mix-up on the Gradient.

There was surely never such a scene; anxious spectators yelled themselves hoarse to clear the road of a Harley, two Matchlesses, and an Enfield; excited sidecar passengers joined in, and pandemonium prevailed. It was strange that hereabouts the percentage of failures was over 80, whereas formerly fully 60 per cent. had succeeded. Hoult (993 Matchless sc.) relieved the monotony, sending a shower of gravel from his driving wheel among the spectators, now scattered all over the roadway; then Cunningham (555 P. and M. sc.) stopped, as his front wheel refused to steer straight ahead. Four more

One of the finest sidecar ascents of Beggar's Roost was made by W. A. Fell-Smith (976 Brough-Superior sidecar), but even his passenger found it advisable to transfer more weight to the rear wheel.

**The London-Land's End Trial.**—sidecars followed in a bunch: Choldcroft (750 A.J.S. sc.) stopped; Macdonald (993 Matchless sc.) did well; Maskell (Matchless sc.) failed, as did Wallis (688 Coventry-Victor sc.), but the last-named restarted and went up well. Wheel spin stopped Clark (499 Zenith sc.), but Neill (980 Matchless sc.) made a splendid ascent. Danskin (998 Rudge sc.) stopped and burnt his clutch out, as did several others, in attempting a restart, and so retired; Elce (Morgan), effectually stopped by a sidecar failure, restarted and went up well, followed by H. F. S. Morgan, who was exceptionally good.

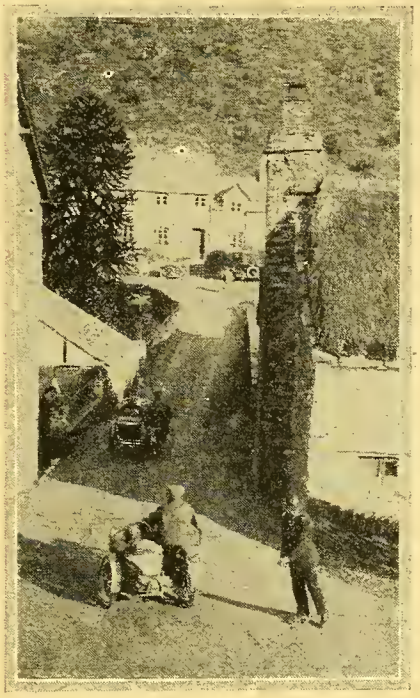
Spouse (T.B.) halted on the crest of the steep pitch, also Gard (Matchless sc.). Cars now began to arrive, but a number of sidecar competitors, having lost time, trickled through while the car ascents were in progress, including Allen (Matchless), who was good, Brettell (370 Connaught sc.), who stopped, due to wheel spin only, King (989 Harley-Davidson sc.), stopped, Strong (989 Harley-Davidson sc.), a plucky rider minus legs, who had to be assisted while a passing shower cooled the willing helpers, and Gripper (Morgan), who made an excellent ascent.

### Last Moment Change of Route.

The last moment change of route after the ascent of Beggar's Roost meant that competitors doubled back on their own tracks for a short distance at Barbrook Mill. This worked quite well in the case of the solo machines, but there were some time-wasting jams on the road before the later sidecars got clear.

On via Simonsbath, South Molton, and Umberleigh Bridge to another check at Great Torrington the road was often exceedingly tortuous, and in the neighbourhood of Umberleigh Bridge there were hills of considerable severity. Added to this the gale seemed ever-increasing in intensity.

A. H. Carnt (532 Scott-Squirrel sc.) gave up near Umberleigh, and I. P. Brettell on the 370 c.c. Connaught outfit



Barbrook bridge, which the competitors crossed and re-crossed on their detour to Beggar's Roost. A local policeman lends a willing hand at traffic control.

was noticed gamely fighting a losing battle with the head wind.

A little further on H. W. Harrington's 349 c.c. Douglas with the draught-board tank was overtaken in trouble from the same cause, and indeed there were few of the solo lightweights or passenger outfits which did not find difficulty in keeping to schedule over this section. Driving, too, was most unpleasant; it was almost impossible to open more than one eye at a time; A. G. Cocks (598 Beardmore sc.) left the road entirely at one stage and went ploughing over the moor to the considerable detriment of his front fork, although on the whole the Beardmore stood it remarkably well.

### Terrible Weather.

All the way to the Launceston lunch stop and for the first hundred riders or so right into Bodmin the blinding rain continued, and it was no uncommon sight to meet people returning in disgust; it was however, quite impossible to decipher their numbers as they sped homewards.

F. W. Becker (688 McKechnie sc.), sustained the last straw in this section in the shape of a puncture in the sidecar tyre.

There were dry intervals after Bodmin, which gradually increased in duration until a cold rainless wind was the only remaining obstacle to reaching the end on time. At the same time there were several not unexpected secret checks, which, in conjunction with the tortuous nature of the switch road chosen from Penzance this year, made the task quite sufficiently arduous

Land's End was reached by the vanguard of the surviving soloists shortly after four o'clock, but it was well past lighting-up time before the last car finished the memorable 312 miles ride.

An article describing how the cars fared in this severe trial appears in to-morrow's issue of *The Autocar*

## THOSE WHO REACHED LAND'S END.

### MOTOR BICYCLES.

F. A. Longman (498 Ariel), E. Pond (550 Triumph), Victor Belfield (398 A.B.C.), P. L. B. Wills (499 Rudge), C. J. Wheeler (481 Scott Squirrel), E. Atkins (498 Ariel), P. H. Jones (499 Sunbeam), C. F. Plowman (499 Sunbeam), E. J. Keyhoe (499 Rudge), G. W. Segrott (498 Ariel), E. W. Spencer (494 Douglas), J. A. Newman (497 Douglas), O. S. Bridcutt (499 Dunelt), S. W. Ratcliffe (956 Brough Superior), A. C. Rhodes (499 Triumph Ricardo), G. Brough (956 Brough Superior), P. Street (499 Sunbeam), C. Dickinson (498 Ariel), C. Bourlet (498 Ariel), H. C. Nias (498 Ariel), L. N. Stannah (499 Rover), E. A. Collum (596 Indian Scout), T. L. Daniels (595 Douglas), S. W. Easton (398 A.B.C.), G. S. Green (532 Scott), R. V. Saltmarsh (584 Harley-Davidson), J. Richardson (498 Lea-Francis), E. H. Gifford (496 Martinsyde), H. H. Nicholson (496 Martinsyde), A. A. F. Symes (678 Martinsyde), M. Pearson (550 Triumph), B. H. # CURRENT CHAT (*continued from p. 510*)

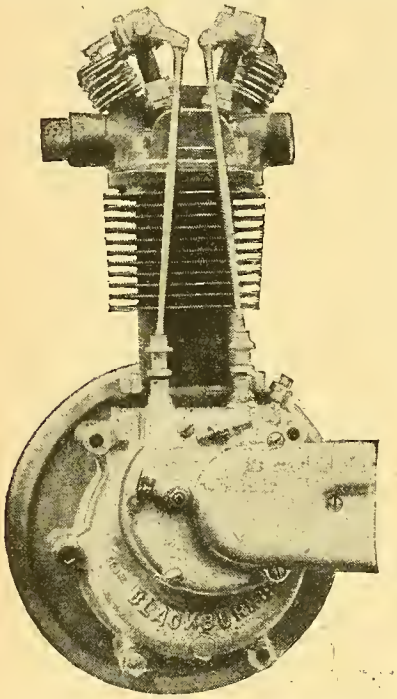
### Honours Easy.

Was Beggar's Roost or Lynton the worse hill in the London-Land's End Trial? Opinion at present is divided.

### Police Holiday Activity.

On Good Friday a member of *The Motor Cycle* staff was held up by the Somerset police no less than seven times between Frome and Porlock.



As will be seen, the new lightweight record-breaking Blackburne engine follows closely the lines of the 350 c.c. type bearing the same name.

### Aids to Cooling.

Whether to leave one's cylinder bare or to paint it dead black is a problem for those who want the best cooling results. During the holiday week-end we saw an Autowheel owner, however, who had struck out on original lines, for his cylinder was covered with gold paint.

### The Week-End Gale.

Not only the London-Land's End competitors, but everyone who took to the road during the Easter holiday, experienced the force of the gale which swept over the country. Trees were blown down in many districts. On two occasions pedal cyclists were blown over immediately in front of our machine.

### Great Travellers!

Rather an amusing *faux pas* was made in the programme of this year's London—Land's End Trial. Travelling marshals were instructed, among other things, to ensure that every finisher returned his number-plates at Staines. To do this they would certainly have had to travel!

### Important 250 c.c. Class Records.

Early last week W. D. Marchant, riding a Sheffield-Henderson with a new 250 c.c. o.h.v. Blackburne engine, gained the British mile record at a speed of 72.89 m.p.h., and the kilometre at 71.96 m.p.h. He then went for the international (mean speed) records, covering the mile at the rate (average of two runs) of 71.42 m.p.h., and the kilometre at 71.88 m.p.h.—truly wonderful speeds for so small an engine.

On the following Thursday the same rider and machine created new records for the hour and the fifty miles, his speeds being respectively 58.89 m.p.h. and 58.99 m.p.h., over 3 m.p.h. increase on the previous bests.

The new Blackburne lightweight engine is built on the lines of the famous 350 c.c. unit, having inclined overhead valves. The bore and stroke are 60 and 88 mm. respectively, the capacity being 249 c.c.

### Relieving Officer's Motor Cycle.

A motor cycle, value £57, has been provided for the relieving officer of the Henley Board of Guardians.

### Cost of Making a New Road.

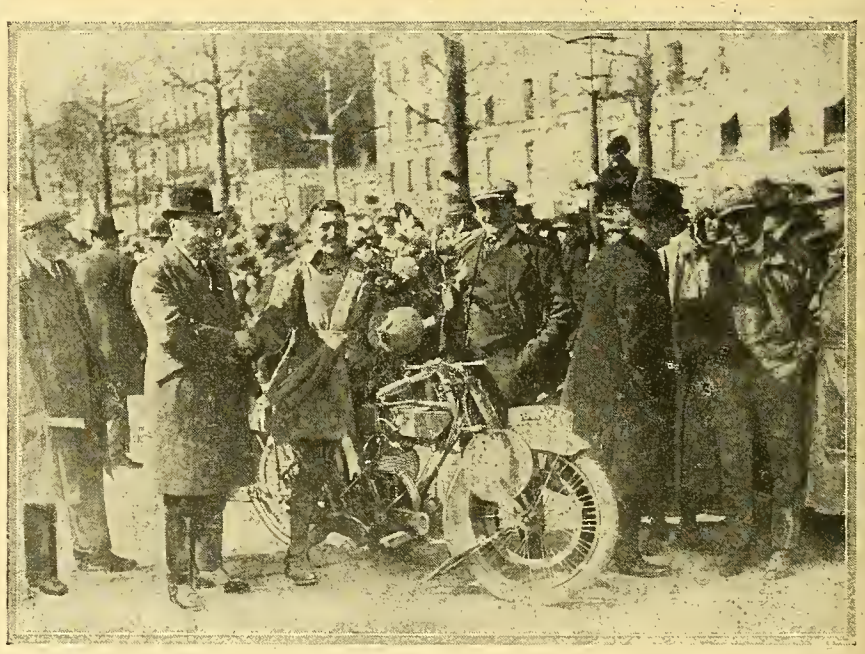
A new tar-macadam 20ft. road costs about £3,000 per mile, but the estimates submitted by local authorities to the Ministry of Transport are often excessive. Many existing roads could be made good for seven years for half that amount.

### "Dug-outs."

Ordinarily the City of London is not an ideal place for the riding of ancient fixed geared machines, but it is deserted at holiday times, and on Easter Monday we were much interested in the passage of two a.i.v. singles near the Tower. Neither machine was less than 15 years' old, and they romped along the quiet streets quite healthily.

### Over-loading.

To possess a more-or-less capable passenger machine is to be expected to provide transport for friends and relatives on holiday occasions. From every big city the roads were to be seen thronged with outfits carrying at least double the normal load. What is more, the overburdened mounts do not appear to suffer appreciably.



THE TOUR DE FRANCE. Berrenger, winner of the 750 c.c. class on a B.S.A., being congratulated at finish of 2,300 miles trial by M. Pollack, a prominent member of the M.C.F.

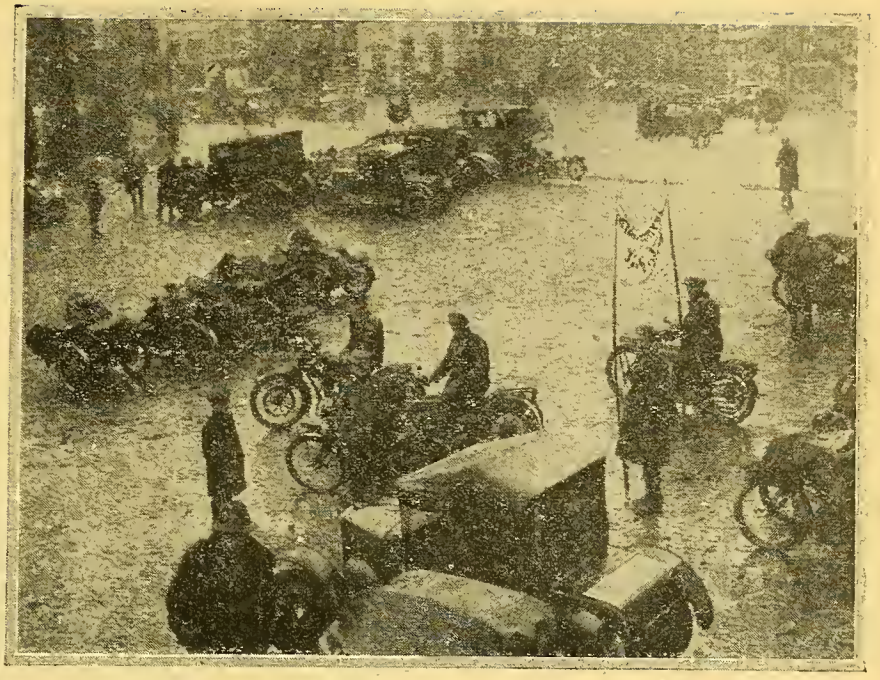
# THE RICHMOND MEET.

## Heavy and Continuous Rain Spoils Popular Northern Good Friday Rendezvous.

OWING to the early date at which this popular meeting of Northern motor cyclists is held, a variety of weather conditions has from time to time attended it, but never previously has the day been so completely spoilt by unbroken downpour as on Friday last.

Over two thousand motor cyclists were expected, and provision made for their reception, but nothing approaching this number materialised. At six on Good Friday morning the officials were out, marking off the square for the various clubs. An hour or so later the rain began, and continued to fall without interlude to the end of the day, entirely obliterating their efforts.

The best representation of members was put up by the Middlesbrough Club, followed by Stockton. The Mayor, in his speech preceding the donation of the prizes by the Mayoress, specially commented upon the manner in which the Middlesbrough Club had always upheld the event, and he thought that it was largely due to them that the popularity of the meet has grown so considerably. He extended a cordial invitation to the promoters of the meet to make it in future a three days' affair, extending over to Easter Monday.



Owing to the rain, the ancient square at Richmond (Yorks) did not present its usual Good Friday spectacle of hundreds of machines. The majority sought shelter.

The A.C.U. Cup was won by the Berwick club, which unquestionably deserved it, considering the weather conditions and the distance the men had travelled. Scarborough and North London were highly commended.

In the smartest lady's machine, a prize given by Councillor Parnley was won by Mrs. Linfoot, of Stockton (2¼ Levis). A second award went to Miss E. C. Simkins (2¼ Clyno), of Darlington. The prize offered by Mr. W. R. Haggas for the most ingenious gadget was won by Harold Walton, of Stockton, whose acetylene headlamp was fitted with an auxiliary electric bulb so that either gas or electricity could be used.

### Test of Mudguarding.

Mudguarding in the solo machines was very poor, and the weather conditions showed up its shortcomings. A standard A.B.C., a standard Scott, and a 2¾ h.p. New Imperial were the only three machines which could be considered adequately mudguarded, and in the opinion of the judges the A.B.C. was the best. Therefore Major Renwick's prize went to C. E. Morris, of the North London Club.

*The Motor Cycle* award for the best protected sidecar outfit went to M. Brass, whose 8 h.p. Brough Superior outfit was fitted with ingenious and practical shields to protect the rider.

In the award for the lady who had ridden the greatest distance to the meet honours were equal between Miss Bel-

Despite weather! Mrs. Linfoot, of Middlesbrough, who secured the lady's prize for the smartest lady's machine. Her mount is a 2¼ h.p. Levis.

Youngest motor cyclist at the meet. Master Blackburn (age 14), of Middlesbrough. His great-grandfather (age 89) also rides a two-stroke, and was only prevented from attending by the heavy rainstorm.

**The Richmond Meet.—**
lerby and Miss Procter, both of the Middlesbrough Club (mounted on Harley-D. and Triumph sidecars respectively). Miss Bellerby drew the handsome silver tray presented by the Mayor of Richmond, and a further award is to be made to Miss Procter. Mr. Longfield's prize for the best kept solo machine was won by A. Hindson, of Darlington (2¾ Blackburne), and that for the best kept sidecar by A. Blackburn (Bat).

The greatest novelty award went to B. Meacock (Doncaster and District), for a set of lighting switches and combined mirror and door let into the dash of the Volta sidecar on an 8 h.p. Blackburne.

At the request of the Ilkley Club officials the Mayor concluded the meeting by presenting Harold Sellers with a handsome silver card tray as a recognition from the members of the Ilkley Club for his able services as secretary, and for his good influence generally in motor cycle circles in the North of England.

# EASTER TWO-DAY HIGHLAND TRIAL.

## Wretched Weather Conditions Make Holiday Event of Glasgow Western M.C.C. Unusually Stiff.

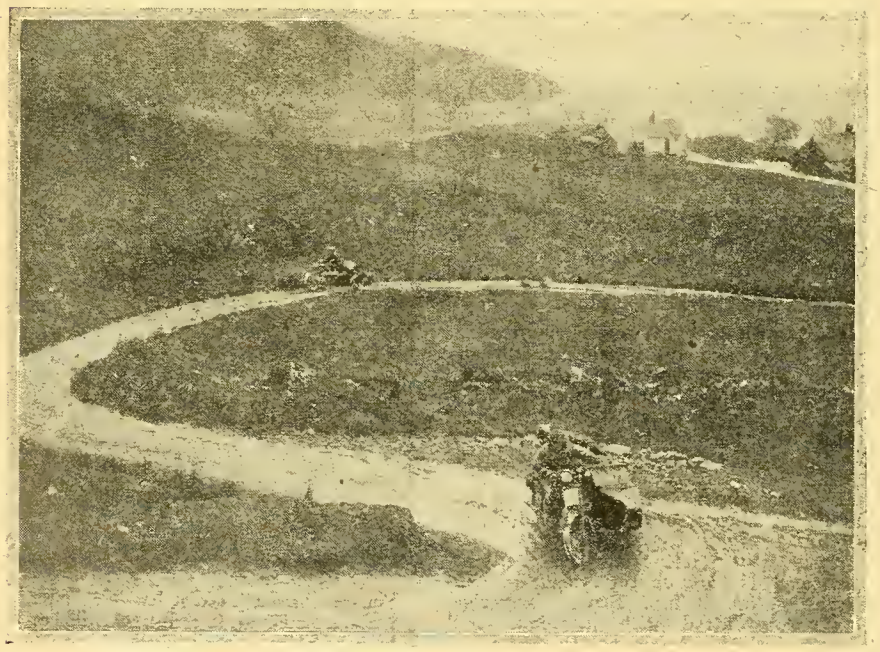
WHEN the Western M.C.C. does anything it is never by halves, and the trial arranged as an Easter two-day event was a real success. Sixty-five competitors started away from Canniesburn Toll, Glasgow, on Saturday last in rain which beggars description.

The course was for the most part a new one, and for almost the whole way the route was over loch-side roads. Loch Lomond, Loch Long, Loch Fyne, Loch Awe are amongst the best known lochs on the way to Oban, which was the last check of the day. In fine weather the scenery is amongst the best in Scotland; on Saturday, however, it was just a ride through a land of mountain and flood.

### On "Rest and Be Thankful."

To the first check at Inverbeg was covered without incident, but the non-stop section from there to the top of Rest and Be Thankful gave the competitors their first anxious moments. Here the first batch of golds vanished. The rain made itself felt, and caused trouble to magnetos and carburetters. Douglas Alexander was amongst the first of the unfortunates; his 3½ h.p. Douglas spluttered and stopped in sight of the check, and it was some time before it could be persuaded into action again. F. Ball (7 A.J.S. sc.) also fizzled out with water in his carburetter. Amongst the best performers was R. Wilson (2¾ A.J.S.), who rode into the flying check, watch in hand, dead on time.

Some idea of the nature of the trial may be gathered from this view of D. S. Barr climbing Ariehamish Hill on a Barr and Stroud engined Ner-a-car.



James Bell (7 A.J.S. sidecar) rounding an awkward right-hand hairpin included in Saturday's route.

Douglas Barr, who was riding a Ner-a-car fitted with one of his firm's B. and S. sleeve-valve engines, was going well all day, and on the very difficult hairpins at Ariehamish the cornering of this machine was excellent.

From the top of the Rest to the lunch stop at Inverary was plane sailing.

### Water-Bound Roads.

Weather conditions now became worse, if possible, and the stiffest part of the course was yet to come. From Gradish to Ford, down Loch Awe side, there was a lot of water on the road, and both riders and passengers were treated to a series of shower-baths; although nothing could make them wetter than the incessant rain had already done.

After Ford the route lay from Ariehamish to New York. There were hills and hairpin bends, some of them being

**Easter Two-Day Highland Trial.—**

1 in 4, a track which in parts is on a cliff high above the loch, and a road surface which for the most part was covered with grass. Failures on a road like this were no disgrace.

The section began with a hill at Ariehamish, which starts from a farmyard; there is a gradient of 1 in 4, and three hairpin bends so acute that the light cars could not round them without reversing.

The officials had arranged for helpers along this section, and they had a busy time of it.

**Belt-slip Prevalent.**

The belt-driven Ariels ridden by R. Lochead and Leo Helyer did not get far, and B. H. Cathruk (4 Dunelt) also suffered from belt-slip and was assisted up the first hill; further up he ran into the bank and gave up. T. J. Perry (7-9 Rudge) appeared to be overgeared; he took the corners at speed, but failed to keep his engine going.

Duncan Bell (2¾ A.J.S. sc.), who had made a fine performance up to this point, was unfortunate. His number-plate had fallen on the road, and while shouting his number to an observer he caught a boulder with his foot-rest, which brought him up very suddenly; he started away again without assistance. Geo. Grinton (7-9 Harley), J. M'Fadyen (8 Sunbeam sc.), and R. Brown (7 A.J.S. sc.) also went over this stretch in good style.

The last check of the day was at the Royal Hotel, Oban, the official hotel for the week-end.

After a change into dry clothes and a hot meal the weather was soon forgotten. In the evening a concert was arranged amongst the club members, and it is surprising what talent the club can muster when occasion arises.

Sunday in and about Oban was spent in various ways, and with the weather improving the prospects for the morrow were good.

**The Return Journey.**

Owing to Saturday's weather the number of competitors was very much reduced when they were checked out of Oban on the Monday morning. One-third of the numbers called failed to appear; the weather, however, this morning was ideal. Down through the pass of Melfort presented no difficulties, but after Kilmelfort it was back in the rough again.

After passing Loch Avich the competitors were back to Loch Awe side, the scene of many of Saturday's failures. Barnet Gold (2¾ Francis Barnett sc.) found trouble on the first hill, and baulked about half a dozen competitors, amongst them being R. MacRae (7-9 Harley-Davidson), whose sidecar collapsed shortly after. Next came the hill at Covaignaish, which proved to be the hardest task of the day; the competitors were sent up one at a time. Amongst the soloists, R. Wilson (2¾ A.J.S.) and H. Wilson (Edmund) were outstanding, and amongst the sidecars G. Grinton (7-9 Harley-D. sc.), who went up steadily, R. Watson (6 Martinsyde sc.), who was probably the fastest, and D. Bell (2¾ A.J.S.), whose climb was good, and the pluckiest performance of anyone in the trial. After Craigneish and Ford the course was round by Lochgilphead to the lunch check at Inverary. The Duke of Argyll came down to see them go away.

From Inverary to Glasgow saw but few failures, and at Cumnesburn Toll finished a good sporting trial.

# HILL CLIMBING IN YORKSHIRE.

THE Staxton Hill Climb, probably the most popular event of its kind held in Yorkshire, took place on Easter Monday in cold, wet weather, with a strong following wind for the competitors. There was a record entry, a big gathering of spectators, and plenty of incident at the starting-point, where the grease resulted in several spills. One competitor, Smith-Branhan, experienced trouble with his sidecar and ran into the spectators, fortunately without serious consequences.

The results of the various classes, which were run off smartly, follow :—

275 c.c. Class.

Stainforth (New Imperial), 37 sec.
Wood (New Imperial), 37⅗ sec.
Bower (New Imperial), 39⅕ sec

Amateur :—
Miss Wilson (Velocette).

350 c.c. Class.

Dance (Sunbeam), 31⅕ sec.
Wilkinson (A.J.S.), 32⅕ sec.
Hodgson (Sheffield Henderson).

Amateur :—
Sheppeard (Sheffield Henderson).

600 c.c. Sidecars.

Cawthorne (Norton sc.), 32⅖ sec.
Wood (Scott sc.), 33 sec.
Dance (Sunbeam sc.), 35⅖ sec.

Amateur :—
Boston (A.J.S.).

800 c.c. Sidecars.

Wood (Scott sc.), 33½ sec.
Cawthorne (Norton sc.), 35⅖ sec.
Searle (Sheffield Henderson sc.), 35⅗ sec.

Amateur :—

Bradshaw (Sunbeam).

Solo, Unlimited.

Dixon (Harley-Davidson), 28 sec.

Fastest time :—
Wood (Scott), 28⅖ sec.
Bower (Norton), 31 sec., amateur.

Solo Touring, 650 c.c.

Brabble (amateur) (Norton), 35 sec.
Stephenson (Zenith-Bradshaw), 35⅖ sec.
Turner (Norton), 37⅖ sec.

Cyclecar (970lb., 1,100 c.c.).

Moore (G.N.), 33⅗ sec.
Cave (amateur) (Morgan), 48⅖ sec.
Waters (G.N.), 50⅕ sec.

# EASTER TWO DAYS' TRIAL IN IRELAND.

A TWO-DAYS' trial to Tranmore, Co. Waterford, and back during the Easter holidays was held by the Leinster Motor Cycle Club. The weather conditions were most unpromising at the start from Dublin on Saturday morning, but nevertheless twenty-nine of the thirty-two entrants turned up and were duly despatched. The first portion of the outward journey was over a circuitous route in Co. Wicklow, and with the roads in a very heavy state owing to the previous day's downpour, it was exceedingly difficult to average twenty miles an hour. From Woodenbridge onwards the conditions were easier. Those who took part in the trial were as under :—

J. J. Boggan (8 Henderson); C. S. Maguire (4½ Humber); T. F. Slevin (2¼ Velocette); M. J. Doyle (2¾ New Imperial); W. J. Fagan (5 Indian); P. A. Bell (7 James sc.); J. Patton (2¼ James); J. Healy (4¼ James); H. E. Bell (3½ James); H. Briggs (2¾ Douglas); J. A. Carville (4¼ B.S.A.); E. G. Draper (4 Indian); Geo. Thomson (5½ N.U.T.); T. E. Greene (3½ Douglas); P. F. Moran (3¼ Velocette); T. F. [illegible] J. Browne (3½ Douglas); T. Henry (2¼ Velocette); F. Holmes (8 Matchless sc.); G. A. Daly (4 Triumph); R. Murphy (4 Triumph); W. E. S. Gilmour (4 Douglas sc.); Jas. Adair (4 Triumph); J. A. Adair (4 B.S.A.); H. Adair (4 B.S.A.); R. M. Murphy (4 Triumph); S. J. Redmond (7-9 Indian sc.); W. J. Burney (9 Belsize); J. G. Burney (8 Enfield sc.).

Of the above, Doyle, Fagan, Patton, Healy, Briggs, Draper, Moran, and Gilmour failed to complete the 153 miles of the first day's run. The second day's route was mostly over main roads.

# HOLIDAY EVENT NEAR DUBLIN.

THE original intention of the Dublin and District M.C. to hold the open trial for the Dunlop Cup on Easter Monday was abandoned so as to permit members to take part in the two-days event of the Leinster Club. An open trial without a premier award was substituted, and for this an entry of thirty-four was received. The course lay in Co. Wicklow, and, with favourable weather the outing was more or less of a holiday nature.

All of the entrants, with one exception, took part. The crossing of Wicklow Gap in the forenoon and the traversing of a "Colonial" Section between Laragh and Roundwood were the chief features of the trial. Of the thirty-three starters, the following completed the course on time :—

Major J. A. H. Waters (2¾ A.J.S.), Mrs. Waters (2¼ Velocette), Thos. Murphy (2¾ Douglas), R. R. Hill (2¼ Velocette), G. V. B. Cooke (3½ Sunbeam), E. Adair (3½ Premier sc.), E. McGuire (8 Royal Enfield sc.), L. A. W. Orr (2¼ Royal Enfield), D. Orr (2½ Sun Vitesse), G. Ellerker (2¾ Douglas), R. Talkington (2¾ New Imperial), Hugh W. Nesbitt (3½ Norton), G. W. Travey (8 Sparkbrook), Dene Allen (4 Norton sc.), A. Carton (3½ Norton), E. A. Tracey (4 Indian Scout), H. McGarry (8 Ariel sc.), H. McAllister (2¾ A.J.S. sc.), P. Grimes (8 Ariel sc.), W. H. Freeman (7 A.J.S. sc.), R. Watson (4 Triumph), P. H. Hurse (4½ Ariel sc.), M. McSlerry (8 Matchless sc.), A. L. Murray (2¼ Levis), J. F. McMillan (3½ Campion), A. Breslin (4 Triumph sc.), A. Maher (4 Douglas sc.), F. O'Connor (3½ Douglas), A. G. Coard (4 Indian), J. H. Patton (2¼ James), R. Gill (2¼ Radco), R. Humphreys (3½ Norton), J. Hanley (2¾ Raleigh).

# CLUB NEWS (continued from p. 504)

### Marlow and District M.C.C.

The club held its opening run on Easter Monday, the venue being Kop Hill, where an impromptu trial was held. Some good climbs were made, and a most enjoyable afternoon was spent.

Any motor cyclists in the district are welcome on any run, and the hon. secretary, Mr. A. F. H. Baldry, Marlow Common, Bucks, will be pleased to answer any inquiries.

### Coatbridge, Airdrie and District M.C.C.

Kyle's Garage, Bank Street, Coatbridge, presented an unusually lively and animated scene on the afternoon of Saturday last, when the club met for the opening run. The gathering, including about seventy members, attracted much interest and attention from the townspeople, crowds of whom lined the streets to view the proceedings. Enthusiasm and good fellowship prevailed everywhere throughout, and every member who left Coatbridge reached Lanark, despite the trying weather conditions. At the Bonnington Hotel, Lanark, the company indulged in an enjoyable tea, and afterwards listened to a short concert programme, which was much appreciated.

### Bradford M.C. and L.C.C.

In the form of a Despatch Riders' reliability trial the club held its second event of the year on April 9th. Competitors had to find their route by the map, as at each check a card was given bearing the next destination and mileage by the nearest route. The Sidney Cup (presented by Charles Sidney, Ltd., of Bradford), to be won outright, was the first prize. There were 30 entries, and the distance of the course was 90 miles, over some "tricky" roads. Result :—

1st: Sidney Cup: H. S. Lockwood (3¾ Scott sc.): Total error, 17 min. 35 sec.
2nd: Silver Medal: E. P. Dodd (3½ Sunbeam): Total error, 27 min. 36 sec.
3rd: Bronze Medal: H. S. Moorhouse (4 Triumph): Total error, 28 min. 50 sec.

*April 23rd.—Croydon and District M.C.C.—Opening Run to Burford Bridge.*

### Barrow and District M.C.

The successful competitors in the club's reliability trial on the 9th inst. were as follows :—

1st: W. Exton (5-6 Unique-Jap).
2nd: C. H. Oliverson (8-9 Belsize-Bradshaw l.c.).
3rd: Bryan Fisher (4 Norton).

### Southport M.C.

Over a course of 196 miles to the Lakes and back, the club held a twelve hours' reliability trial for the President's Challenge Cup and several special prizes. The entries included 17 solo machines, three sidecars, and two cycle cars. All the machines did very well at the Kirkstone Pass climb, Jones (2¾ A.J.S.) covering the three miles in 7m. 50s.; Hughes (Morgan), 8m. 55s.; Klein (Zenith-Bradshaw), 9m. 2s.; King (Zenith-Bradshaw), 9m. 5s.; Ecroyd (Morgan), 9m. 20s.; Allison (Sunbeam), 9m. 22s.; Killey (Triumph), 9m. 55s. Another creditable performance was that of Stott (2½ Bown-Villiers). On the return journey no marks were lost by the fourteen competitors who finished, and eleven of them had not lost a mark at any of the checks or controls. The winner of the President's prize was Klein on a Zenith-Bradshaw, and he also took a special prize for the best performance on a solo mount over 350 c.c. Jones (2¾ A.J.S.) won the special prize for solos under 350 c.c.

### West Kent M.C.

There were between 1,500 and 2,000 spectators at the very successful hill climb held by the combined Kent clubs at Vigo Hill on Good Friday. The timed distance was 550 yards, and the average gradient 1 in 5. G. Williams (3½ Sunbeam) made fastest time of the day, his speed being 54.2 m.p.h. Other results follow :—

350 C.C.

# T.T. NOTES AND NEWS.

SOME alterations and additions have been made to the list of entries already published in *The Motor Cycle*. In the lightweight races the 2¼ h.p Sheffield-Hendersons previously entered by Henderson Motors, Ltd., are now under the name of L. B. Henderson; the 2¼ h.p. Diamond ridden by F. J. Price previously in the lightweight class has been transferred to the Junior Race. New Imperial machines ridden by Calder, Prentice, and Kershaw have been transferred from the Junior to the Lightweight Race. In the Junior, other alterations and additions are J. Bance (2¼ O.E.C.-Blackburne) and J. A. Porter (2¾ New Gerrard.) Porter was previously down as riding a New Scale. Norton riders are now specified; they are H. W. Hassall, J. W. Shaw, D. M. Brown, R. T. Cawthorne, and N. Black. These are machines entered by the firm. In the Senior Race, J. A. Porter is down as riding a New Gerrard.

* * * *

Tarring is in progress near Union Mills and Crosby, and from Ballacraine to Ballig Bridge the roads have been re-surfaced.

* * * *

The hairpin at Governor's Bridge will in time be entirely eliminated, but unfortunately the modification will not be ready for the forthcoming races.

* * * *

Hope that a crane may be installed on the quay is not absolutely abandoned. Particulars of a small electric crane have been laid before the Steam Packet Co. and the Highway Board, and it is to be hoped that they may be persuaded to hire one for the benefit of competitors and visitors.

A change has been made in the situation of the A.C.U. office. This year it will be at the Peveril Hotel, where Major Dixon Spain will be in charge.

* * * *

Further improvement for the scoring board at the grand stand has been evolved. It consists of a clock arrangement above each competitor's number, on which there are six letters. These not only indicate certain positions on the course, but also correspond in numbers to the actual laps made in the Senior Race. The letters on the clock face, reading clockwise, are: F, Start and Finish; Q, Quarter Bridge; B, Ballacraine; S, Sulby; R, Ramsey; B, Bungalow. One hand is advanced round the dial letter by letter as the rider completes his laps, while the other is used to indicate the point on the course at which he was last signalled.

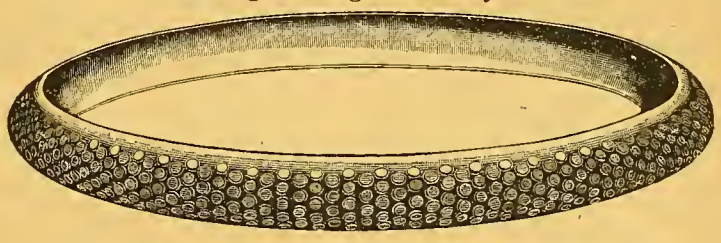
# "The Hermetic" Tyre Protecting Band

(Pat. No. 29575/20)

The "Hermetic" Band is made of good resilient rubber only with specially shaped and graduated rubber studs moulded upon its upper surface.
The Band is used *inside* the Tyre, between the air tube and the tyre lining.
The air pressure in the tube compresses the band against the tyre lining, thus forming a resilient supporting cushion which absorbs all road shocks and deflects any ordinary puncturing agent.

**It is a real Trouble Saver and Tyre Economiser. . .**

for the prevention of Tyre Damage resulting from road shocks and punctures and for strengthening weak tyres.



**Price 14/-. Easily Fitted or Detached.**
**One Band Outlasts Three Tyres.**
May be obtained through any Motorcycle or Cycle Agent.

Pamphlet on application:

The BARR & STROUD SINGLE SLEEVE Four Stroke Engine

*It's the Engine that Counts*

## MORE PROOFS.

WEEK by week proof accumulates of the efficiency of the Barr and Stroud 4-stroke Sleeve Valve Engine **(350 c.c.)**

In the A.C.U. Standard Stock Trial, on March 11th, Mr. J. J. Donaldson on a "Royal Scot," with "B. & S." Engine, won a Special Certificate of Merit.

In the Birmingham Victory Cup Trial, on March 18th, Mr. F. J. Price, on a "Diamond," won the Duke Cup (for best performance on a solo machine over 275 c.c.) and a Gold Medal.

The "B. & S." Engine is just as reliable in everyday use as it is in competition. It is remarkable for the ease with which it can be handled, the power it develops, its flexibility, silence and low running costs. Fuel consumption 140 m.p.g.; oil 2,500 m.p.g.

*The Single Sleeve of the Barr and Stroud Engine.*

## Booklet FREE.

BEFORE placing your order for a new machine, send to us for copy of *"The Book of the 'B. & S.' Engine"*; and write to the makers of Beardmore-Precision, Diamond, Edmund and Royal Scot machines for details of their models equipped with it.

"B. & S." Engines can be fitted to existing machines by Warnes, Ltd., Churchfield Road, Acton, W. 3.

# MISCELLANEOUS ADVERTISEMENTS.

## PRICES.

**ADVERTISEMENTS** in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable & Co. to ILIFFE & SONS Ltd., and crossed Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

## NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. *Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

## ☞ DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor. Carriage is to be paid by the buyer, but in the event of no sale each party pays carriage one way. The seller takes the risk of damage in transit. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, ½%. All deposit matters are dealt with at Dorset House, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

## SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

## MOTOR CYCLES FOR SALE.

### A.B.C.

A.B.C. 1921, September, Cowey, Challenge tubes, spares, perfect; £68.—Jakins, 247, High Rd., Lee. [1581

# Did you enjoy your Easter Holiday?

¶ If you are one of the unfortunates who endured a tedious railway journey or in some other way felt the lack of a motor-cycle, you will doubtless desire to at once remedy such an unsatisfactory state of affairs.

¶ There is really no reason why you should not immediately participate in the delights of motor-cycling, as we can supply a machine that exactly suits your needs.

¶ If it is not convenient to pay cash down for it take advantage of our system of deferred settlement, it is simplicity itself and has no irritating conditions.

¶ May we send you now our lists of new and second-hand machines? They include models of nearly every reputable make.

# TYRES

## IMPORTANT NOTICE.

Owing to the various cheap covers that are being offered, we desire to draw your attention to the fact that they do not represent the best value. If you require a reliable article you must pay a reasonable price. Cheap goods not only 'let you down' on the road but mean additional expense. The experienced motor-cyclist pays 'a little more' because he knows it is the cheapest in the end. Everything offered below is guaranteed to be thoroughly reliable.

***These covers are not old W.D. stock, but special clearance lines which we have purchased at slump prices and we are anxious to dispose of, to make room for a new Motor Cycle Cover of our own design we shall be shortly marketing.***

An Opportunity for Enterprising Agents.

THE MOTOR CYCLE

# Insurance Policies

**IMPORTANT AGENCY EXTENSION**

SERVICE to your clients should include the best and most reliable Motor Cycle Insurance Agency it is possible to obtain.

The Policies you recommend should carry a name that inspires confidence and gives an assurance of prompt and generous settlement of claims.

From your own point of view it is desirable that you should represent a company that enjoys the highest reputation among the motoring public, and be able to offer policies that are known to give complete and comprehensive cover.

**An extension of the Agency and Service arrangements for "The Motor Cycle" policies is now being made, and applications are invited from agents who realise the value of specialised experience and the importance of maintaining the goodwill of their clients.**

Here is your opportunity of handling policies that every motor cyclist knows and the value of which he fully appreciates.

WRITE TO-DAY FOR FULL PARTICULARS.

Address—Agency Dept.,

**The AUTOCAR FIRE and ACCIDENT INSURANCE COMPANY, LIMITED**

Head Office:

**77, Cheapside, London, E.C.2.**

*Telephone: City 9831 and 9832.*

*Telegrams: "Autoinsure, Cent. London."*

## Lesser Popularity of Speed Events.

LAST year more than 60 per cent. of the open motor cycle competitions took the form of speed trials or, what is much the same thing, timed hill-climbs; this year's fixture list of important dates consists mainly of reliability trials, speed events being almost rarities.

This is no doubt in part due to the stand which *The Motor Cycle* made regarding the unwieldy nature the latter type of competition tended to take, often making it wearisome to riders and spectators alike. Racing against the clock lacks any considerable element of the spectacular, and is only interesting if the course (in the case of a hill-climb) be difficult, if the number of classes be curtailed to a minimum, and if the onlookers are able to follow the times, etc., in a fully intelligent manner. If these considerations are kept to the fore, the limited number of open speed trials to be run during 1922 should gain in importance over anything of the kind previously organised, and the very fact that they are limited should further enhance trade and public interest.

## Unmechanically Fitted Sidecars.

SIDECAR attachments and the evils of bad alignment have been discussed in our pages almost *ad nauseam*, but machines are still to be seen on the road every week-end which are not only an offence in the sight of mechanically-minded people, but are actually ludicrous and even dangerous in appearance to the eyes of the everyday world.

Of course, the trouble is chiefly apparent on old machines, especially those not fitted with the maker's own sidecar. An outfit that has seen several years' service in various hands naturally may have suffered, for it is unlikely that the passenger attachment is secured to special lugs built into the frame.

Much of the pleasure of driving a sidecar is lost if the cycle leans in towards the attachment appreciably, for all responsiveness in handling is lost; moreover, the defect encourages a slovenly and ungraceful attitude on the part of the driver, who, to counteract the effect on the steering, often sits with one foot up on the sidecar chassis, his body twisted, and the saddle supporting any part of his anatomy than that for which it was designed. It is such machines and riders which bring discredit on the motor cycle movement generally, and as there is no need for even old machines to remain thus out of adjustment it behoves every self-respecting rider possessing such an outfit to see that it is lined up and gives an appearance of mechanical correctness before it is again seen on the road.

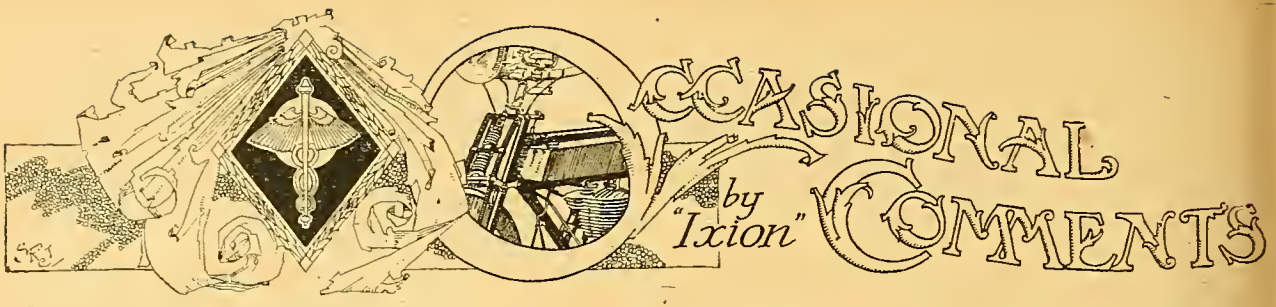
## The Amateur Road Race.

ON Friday last the Auto-Cycle Union reversed its attitude towards the Amateur Road Race which the Manx Motor Cycle Club proposed to hold during the T.T. week. Distinct encouragement was given to the Manx delegates when they first approached the governing body, and "permission was granted for the club to apply for a permit."

In the meantime other influences have been at work. When the Manx delegates formally made application for an open permit on Friday last, it was resolved, for reasons which are stated in another page of this issue, that no permit for an amateur road event on the Wednesday between the two T.T. races would be granted.

The greatest objection was that the committee felt that if such a race had been held between the two T.T. races it would have been to the detriment of the latter.

An index to the advertisements in this issue will be found on Supplement ii.



## Ambitious Amateurs.

LAST week brought me quite a batch of letters, running somewhat as follows :—

"DEAR IXION,

"Motor cycles are the only things I live for. I am at present employed in an office, which I hate.

"I have a 2¼ h.p. baby two-stroke.

"I have occasionally begged a ride on a friend's machine.

"Can you introduce me to some firm who would give me a mount in the T.T., or otherwise assist me to a start in the competition world?"

Obviously, any firm which has lots of young mechanics or apprentices on its own premises, lads who understand and possibly ride the firm's machines better than 80 per cent. of the concern's customers, are unlikely to look far afield for a recruit. So keen is the rivalry in the motor cycle world to-day that it is just as hard to excel in it as anywhere else. I can give no counsel to these discontented penpushers than the disappointing maxim that there is always room at the top. The only royal road into the inner circle of racing men is to tackle them at their own game, and hold your own with them. This is much harder than it used to be, for racing is so specialised that a crack concern will often employ (*a*) a special technical man; (*b*) a picked rider; (*c*) a small experimental workshop. Hence the sagest advice for most would-be T.T. winners is that they should stick to their present jobs until they earn enough to purchase a machine, and then enjoy motor cycles in an amateur status. Nevertheless, the really clever youngster, possessed of sufficient ready money to put in a season's hard work at competitions, may achieve sufficient success to secure a subordinate job on a trade staff.

## About Insurance.

THE rise in premiums coincided with a friend's purchase of a 3½ h.p. machine valued at £85. His meditations ran somewhat as follows: "Better have full cover, and I may lend it to a pal occasionally." The quotation from a tariff company (he fancies there must be some snag in the non-tariff rates) was £6 10s., plus 50% for covering any licensed rider; total, £9 15s. Subsequent reflections were to the following tune: "Dash it all, this is almost as expensive as electric lighting. Let's ask the agent where I can economise." The reply was that if he cared to be content with cover against the three worst foes of the unlucky rider, viz.:

1. Third-party risks.
2. Fire.
3. Theft.

the premium would be £2 14s. plus 27s. extra for covering any friend to whom he might grant a ride. So he decided to be churlish and never to let anybody else drive, so that he is actually paying £2 14s. But it is interesting to notice that covering an £85 500 c.c. machine against accidental damage costs £3 16s. It shows what a lot of petty accidents some folk have, and what almighty smashes occur to quite cautious persons who take the precaution to insure. I must confess that I had a fancy the motor thieves were principally to blame for the rise in premiums.

## The Prop Stand.

MY 200-mile-in-a-day runs are interspersed with other days in which I may not cover 50 miles, and may make as many as thirty stops. At some of these stops there is a kerb handy, against which to support the machine; at others, there is no kerb. My machine weighs 282 lbs. My rear stand is not spring operated, and is not remarkably well balanced, *i.e.* it is rather long and high, and its feet, when in action, are well forward of the rear spindle. So whenever I use it I have to wander round to the tail of the machine, stub the stand with one foot, and haul quite hard with both hands to pull the cycle up. It follows that my enthusiasm for the prop stand, which saves me so much time and exertion, remains undiminished.

## About Jets.

A HARD rider discourses interestingly about jets in a private letter to me. He eschews the various patent variable jets, because he has noticed them leaking on his friends' machines (incidentally, I have not yet sustained this trouble either with the old B. and B., the W.S.R., or the S. and P.). His only road stops are due to choked jets and punctures, so that in theory the variable jet appeals to him as being remediable without tools. He also uses benzole when obtainable, but often he cannot get it on tour, and is then reduced to petrol; and the closed-up 32 jet, which suits benzole on his Triumph, sets up pernicious knocking on pure petrol. So he has to carry a larger jet in reserve for use with petrol; and here, again, a variable jet would suit his needs.

This letter furnishes two strong arguments in favour of the variable jet, and indicates that the firms who market such devices should take steps to reassure a suspicious public against the dread of leaking joints. Short memories, my friends. Most trade riders used handle-bar controlled jets in the last A.C.U. Six Days.

**Occasional Comments.—**

## Mrs. Malaprop.

MY literature is very rusty nowadays, but I fancy it was Sheridan who invented the widow with a knack of using words in their wrong senses. Had the cynical playwright lived to-day, and sampled the fierce joys of motor cycling, how he would have enjoyed a neighbour of mine, who instead of saying "I accelerated" always remarks "I *exhilarated!*"

## The Trade and Trials.

THE correspondence columns of the trade papers indicate that there are sharp divisions of opinion both amongst manufacturers and agents as to the value of our numerous competitions, and the justification of the expense which they imply. Naturally in such a quarter the influence of competitions upon sales is regarded as paramount; and the support which trials receive from traders—an *increasing* support—shows that the majority of the trade recognise that competitions are valuable, even from this comparatively sordid standpoint. My own view is that a large percentage of adults take a very mild interest in freak trials and sprints. But you should catch your motor-cyclist young, if possible, as the Army and the Church try to catch their men young; and it is the competition side of the sport which bites the youngster every time. Any material reduction of the competition programme would be reflected promptly in sales statistics.

## A New Industry.

HERE'S a cutting from the *Barnet Press*:—

> Experienced motor cyclist in London, N.W. district, offers sporting ladies or gentlemen desiring exhilarating country rides the comfortable pillion seat on his special solo motor cycle, 6d. per mile; distance no object; passenger weight limit 9 stone.

I've given many sporting ladies pillion rides, but it never occurred to me to charge them 6d. a mile. Oh, and here's another; from the *Daily News* this time:

> An "Aerial Orient Express" from London to Constantinople is to be started on Saturday. The flight of 2,000 miles will take 40 hours. The fare is £37 10s.—roughly 4½d. per mile.

When I get my wages on Saturday, I will have a few sixpenny miles behind "Experienced Motor Cyclist"; but when I win a T.T. sweep at Douglas, I will have a few 4½d. miles in the air along the Balkan route.

## Dud Bulbs.

UNDER this heading I described what was to me a novel experience with an electric lamp, the bulb refusing to light up, though the filament remained intact, so that I presumed an internal short in the socket. A reader suggests that a leak may have destroyed the vacuum and admitted the air, in which case the filament might convey the current and complete the circuit, but would be so far cooled by the air leak that it would not become incandescent.

ON BEGGAR'S ROOST IN THE LONDON-LAND'S END TRIAL. Spectators gathered on the hill in the early hours of the morning of the 15th, expecting to see some fun. They were not disappointed, for many of the sidecarists were unhappy on the loose surface, although most of the solo riders made fine ascents. T. J. Ross (996 Matchless sidecar) and S. T. Glanfield (269 Cotton Villiers) are shown on a steep portion of the hill.

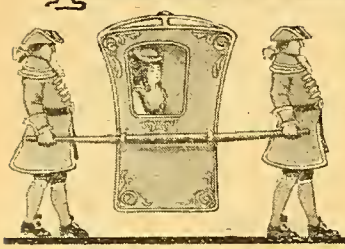
# Passenger Machine Topics



By Friar John.

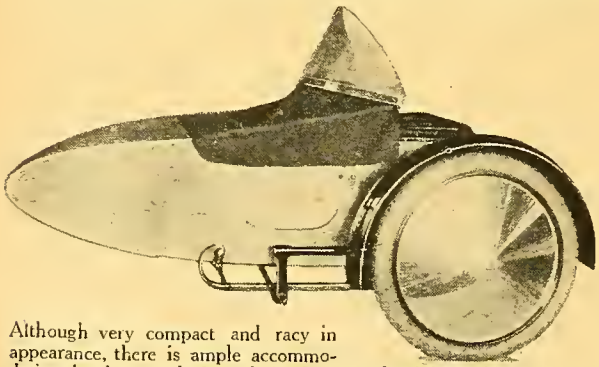
HOW suggestive, how full of optimism are the words "Preparing for the Tour"! No one, not even the grumpiest of individuals, ever prepared for a motor cycle tour except in the highest hopes and with the rosiest anticipation, not even "Wharfedale," who incidentally openly admitted, in his article in the Spring Number, to the luxury of being a pessimist. I, too, agree that one never finishes packing in an amiable frame of mind—that is, finishes packing a sidecar the occupant of which is to be his wife and perhaps a youngster to boot. But, dour "unlucky" "Wharfedale," how melting, how pathetic, how prophetic was the prelude to your final hints—"much-married men need no advice on the subject of what to take on a tour"; the responsibility is taken from them; theirs is but to pack, "theirs is but to do or die"—and the final sentence, how bitter and disillusioned. "Even then she will want to put the soap and sponge in your haversack." The advice, however, that "Wharfedale" offers on the subject of packing is sound; advice founded on practical experience, no matter how bitter or soul-searching, even on such a prosaic subject of packing luggage on the sidecar, must always be fascinating.

DYNAMO lighting has deservedly become popular on both sidecar and solo mounts, the majority of manufacturers offering at least one of their models so equipped. Everyone will admit, too, that the greatest bugbear of night riding—the keeping in order of acetylene sets—is totally eliminated by the use of a good dynamo lighting set. But for the sidecarist who cannot afford that luxury, or whose night riding is of short duration, a dry battery is certainly worth considering. A thoroughly sound production by Messrs. Siemens Bros. & Co., has been sent to me for testing purposes. It is one that should appeal to the rider who has to use his machine for, say, a quarter of an hour every night—at this rate the dry battery should last six months or so.

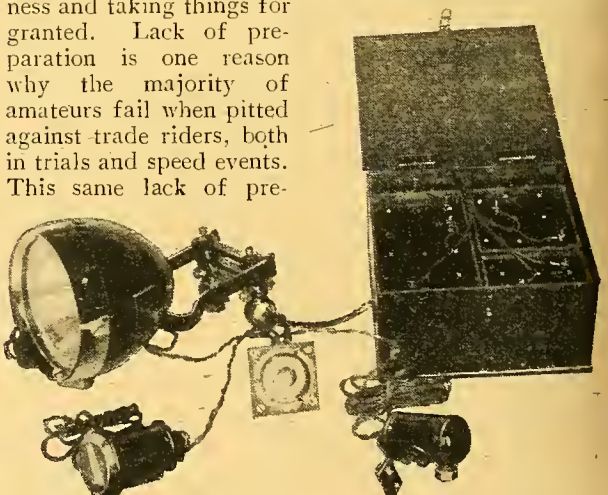
The set is sold complete with a plain but well-finished head, side, and tail lamps, and a switch which can be attached to any convenient place on the sidecar body, the batteries, of course, being carried under the sidecar seat.

When the light from the sidecar lamp shows decreased brilliancy a lower voltage bulb, say 3.5 volt 0.2 amp., can be utilised. Spare head and rear bulbs are included in the equipment.

THE first week of real warm spring-time weather will bring out sidecars that have been stored practically the whole of the winter, and with the sunshine will come the owner who prepares and overhauls his machine on the roadside. Year by year the motor cyclist grows better in this respect, but it must be admitted that the proportion of motor cyclists to car owners found effecting repairs on the roadside is unduly high. This can only be attributed to carelessness and taking things for granted. Lack of preparation is one reason why the majority of amateurs fail when pitted against trade riders, both in trials and speed events. This same lack of pre-



Although very compact and racy in appearance, there is ample accommodation in the rear locker of the Bowser aluminium sidecar for a tin of petrol and for the wind screen. The price is £32 10s. 0d.



A Siemens dry battery lighting set of interest to sidecar owners.

**Passenger Machine Topics.—**

paration at the commencement of a long spell of riding is the cause of half the worry on the roadside. Outfits are taken out after the most perfunctory overhauls, renewals and repairs only taking place when a particular weakness has manifested itself whilst riding. The astute owner, however, of an aged outfit will by now have had his machine thoroughly examined. Everyone is liable to a puncture or an accident, but little sympathy can be offered to the man who wastes his own time and sometimes other people's on roadside repairs which might easily be obviated by five minutes' careful scrutiny at home.

Here are a few things the sidecar owner ought to do if he is to ride with that feeling of security that adds to the pleasure of the road :—

Take out all inner tubes and carefully examine for loose patches and minute cracks.

See that spare tubes are in good condition. Renew the valve rubbers.

Stop all cuts and gashes in the tyre; see that the outfit is complete, and that the solution is not dried up.

The ends of the belt may be perished; examine carefully, and see if it has started to "pull out," even slightly.

Examine the chain, link by link, and do not risk a breakage; if very worn get a new one.

Adjust tappet clearances.

Grind in valves—see that the spare is the correct length and carefully packed, and not rattling about amongst the tools.

Carry a spare spring and cotter.

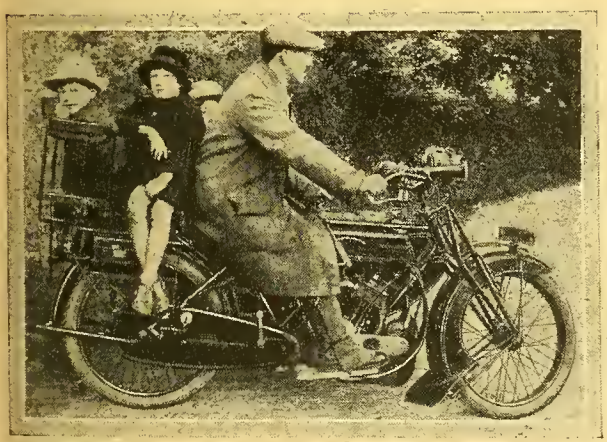
Oil bicycle bearings; even they require attention occasionally.

Don't forget the gear box.

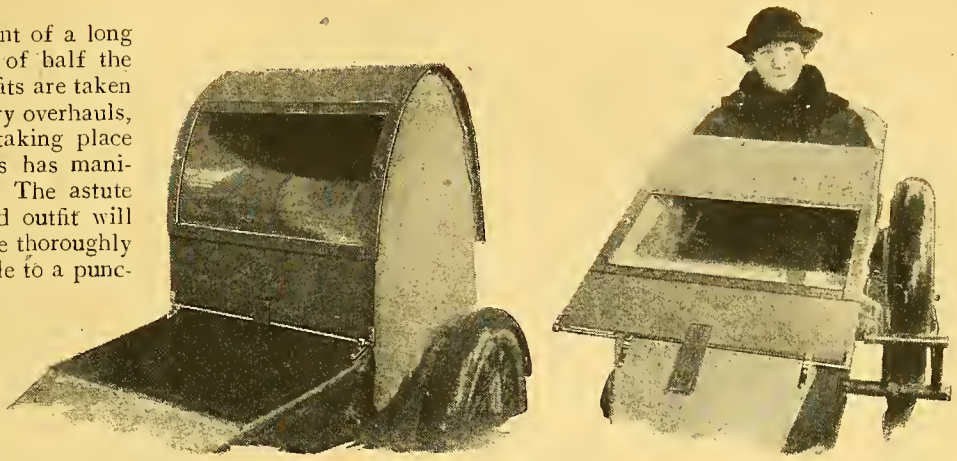
Carry spare carbide always, and see that the burners are in good order.

Flush out the tank with petrol by screwing out the waste cock, clean out float chamber and petrol pipes.

All these are very obvious hints, which is one reason why they are not followed as they should be.



A reader's happy idea for accomodating two juveniles on his outfit without the use of a tandem sidecar.



The latest Coupé combined hood and screen, a device light in construction but unconventional in appearance.

A HOOD and screen for £4, and weighing but 6½lb., is an attractive proposition; this is the price and weight of the new Coupé windscreen by T. A. Simpson, Portsmouth. The unconventional appearance of this little device should be no drawback to anyone requiring an effective and cheap protection for his passenger. Since the Coupé screen was described in *The Motor Cycle* (August 4th, 1921), detailed improvements have been made, an extra cross member has been fitted at the middle of the frame to prevent the water-pressed twill sagging overhead, and bends in front and back tubes are now eliminated.

THE double pillion shown on this page with the seats arranged jaunting-car fashion seems an excellent arrangement, especially from the point of view of the passenger, who has probably had enough of the "little dears" with her in the sidecar at one time or another.

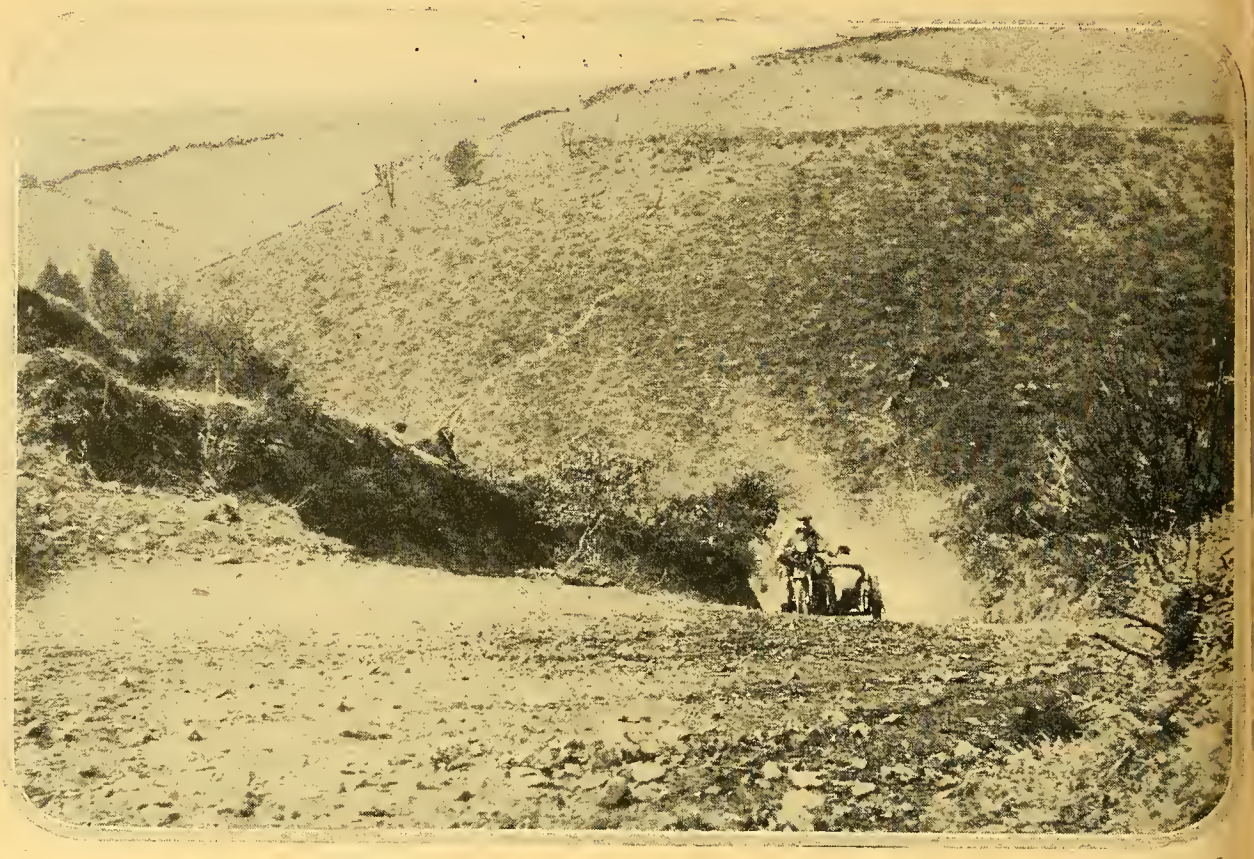
"Sweet recreation barred, what doth ensue,
But moody and dull melancholy."—*Comedy of Errors.*

SHAKESPEARE was indeed an optimist, believing firmly in sport. He took up his characters in the hollow of his hand and bade them dance his tune of tragedy or comedy in no high-brow spirit. Had he lived to-day he would just as likely have immortalised some lusty motor cyclist Adonis as he did the horsemen of his day, or a Venus in a sidecar as surely as he mirrored the milkmaid or the queen. But whoever the character that danced to his tune, and whatever tragedy overtook him, there would run the silver thread of humour through the play, and the spirit of sport and recreation would pervade the atmosphere.

No, perhaps this is hardly a passenger-machine topic, but how can I better remind those who are yet ignorant of the pleasures of the motor cycle (and there are many, even though they read *The Motor Cycle*) than that the great William penned those immortal lines knowing the ways of men and the absolute necessity of relaxation, and there is no recreation under the sun that can chase away "dull melancholy" like the sport of motor cycling.

# A RIVAL TO BEGGAR'S ROOST.

## Hill-hunting Expeditions in North Devon Provide a New Find between Lynton and Barbrook Mill.

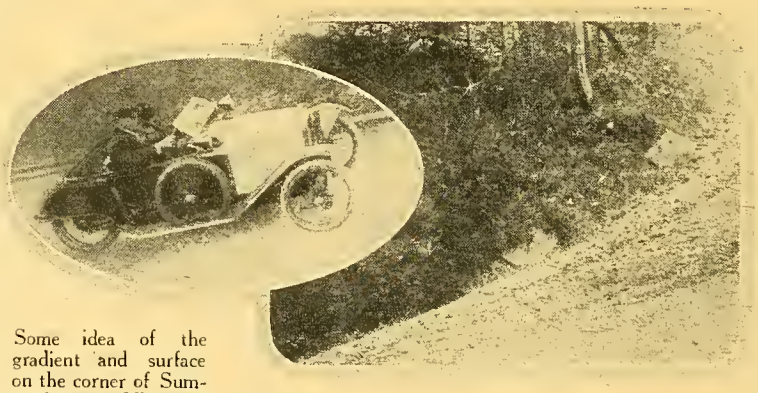


Breasting the 1 in 3·6 portion of Beggar's Roost in good style, R. W. Duke (7 James sidecar).

EXCEPT for the fact that the roadway is narrow, a defect from the competition point of view, there is a test hill near Lynton vieing in severity with Beggar's Roost. Known as Summerhouse Hill, and situated between Lynton and Barbrook Mill, it may be familiar to some of our readers. There are three bends, two of them acute; the gradient in parts must be quite 1 in 4, and the surface is loose, but passable.

We were introduced to the gradient by a group of members of the Birmingham Motor Cycle Club, who, knowing our penchant for hill climbing, dug us out of the comfortable fastnesses of the Lyn Valley Hotel, Lynmouth, to essay the new climb. The Birmingham riders were fresh from the Sangster Cup Trial to Weston-super-Mare; incidentally, they had experienced a terrific gale in that event, trees being encountered across the road in three places, necessitating a detour.

With sun shining on the lower reaches, there was actually thick snow at the top of Summerhouse Hill. First F. Hayes, driving a 10 h.p. New Hudson three-wheeler with a low ratio of 12 to 1, essayed the climb and succeeded comfortably. R. W. Duke on a 7 h.p. James sidecar followed, repeating the success; L. A. Bees (4¼ Beardmore-Precision) came next, with his passenger on the carrier to give extra



Some idea of the gradient and surface on the corner of Summerhouse Hill may be gained from this illustration. (Inset) F. Hayes' New Hudson climbing well.

**A Rival to Beggar's Roost.—** adhesion for the driving wheel; and then P. Bourke (4½ New Hudson sc), whose engine was in wonderfully good fettle. Although all the quartette are well known and experienced hill-climbing exponents, the 100% success somewhat minimised the severity of the climb, so a move was made to Beggar's Roost for purposes of comparison. Again all got up the hill which stopped nearly 50% of the London-Land's End competitors, Bees this time succeeding with his passenger normally seated. All were agreed that Summerhouse Hill, thanks to its two bends, ranks in severity with Beggar's Roost. Still not satisfied, A. J. Dixon, who had joined the party, led the way to the station hill at Lynton, and P. Bourke piloted his New Hudson sidecar up this precipitous ascent to prove to Dixon that the latter's opinion that the hill was unclimbable was wrong.

L. A. Bees (4¼ Beardmore-Precision sidecar) climbing Summerhouse Hill.

P. Bourke (4½ New Hudson sidecar) rounding the second bend of the same hill.

Those who require proof of the efficacy of Ferodo-lined single-plate clutches should invite Hayes to demonstrate the New Hudson clutch. Running downhill with the reverse engaged and brakes off, he will engage the clutch and bring the machine to rest, and straightway run backwards without touching brakes at all. Indeed, he "seesawed" in this fashion for our benefit with both hands above his head—a demonstration the like of which we have never previously witnessed or even heard of.

## TAKING A MOTOR CYCLE TO FRANCE.

SINCE the publication of our article entitled "International Touring," which appeared in *The Motor Cycle* of February 16th, page 199, some alteration has been made in the duties and licences to which visitors are liable.

Motor bicycles may be introduced into France free of duty and without the necessity of paying any cash deposit equivalent to the duty, on the production of a special customs card issued by the A.C.U. or A.A. and M.U. Motor cycles with sidecars attached are liable to the following duties, which must be deposited with the organisation previous to visiting the country.

| | *A. Francs. | *B. Francs. | *C. Francs. |
|---|---|---|---|
| Motor cycles only; per 100 kgs. net .. .. .. .. | 250 | 880 | 220 |
| Sidecars only; charges on body only, weighing less than 125 kilos net. .. .. .. | 150 | 480 | 120 |

The charges for motor cycles must also be multiplied by the coefficient 1.9.

The charges for sidecars must also be multiplied by the coefficient 3.5.

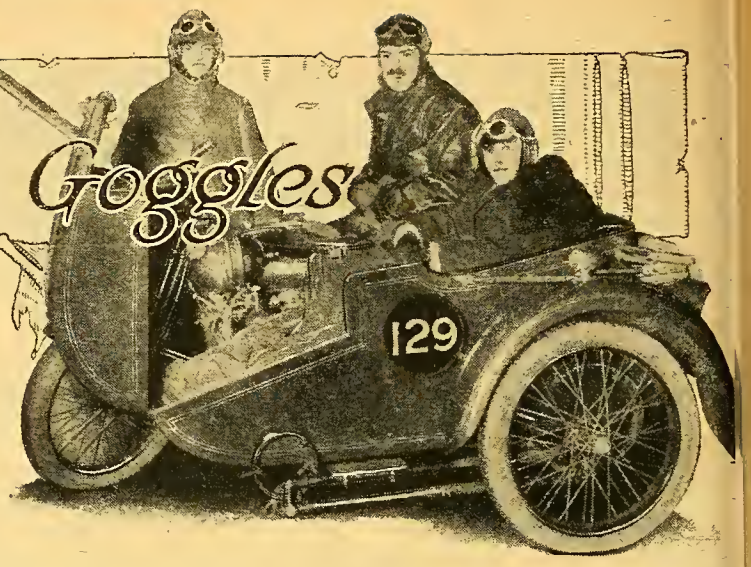
* A.—American makes.

* B.—German, Austrian, Czecho-Slovakian, Greek, Russian, and Portuguese makes.

* C.—Other makes.

On landing the motor cyclist is advised to ask for a *laisser-passer* available for three months at the cost of 2 francs; owners of motor cycles with sidecars should ask for a *laisser-passer* for either 48 hours, which costs 3 francs, for one month (25 francs), or two months (50 francs). Visitors with motor cycles who wish to make a longer stay than these periods must take out the yearly tax of 20 francs in the case of a motor bicycle (which cannot be paid quarterly) and 12 francs 50 centimes per quarter in the case of a sidecar outfit. The latter tax can be paid for the whole year in advance if desired at the cost of 50 francs. This yearly tax can be paid at any tobacconist's, while in the case of a motor bicycle a *plaque de contrôle* is issued and fixed to the machine, which is in the shape of a metal disc. If the owner desires to take a passenger on the carrier he must pay an additional 20 francs.

# Through Feminine Goggles



## London-Land's End and the Ladies.

By MAB. LOCKWOOD TATHAM.

AS I drove up to Slough at about 10 p.m. on Good Friday the scene which met my eyes fired my imagination with the idea that I had stepped into another world—a world peopled by strange creatures in gnome-like head gear, with big glass eyes, a wild manner, and a strange language in which they addressed their various weird chariots. The wild stormy night, pouring rain, and fitful moon lent colour to the fancy, and the cold, inadequate light of arc lamps only seemed to show blacker shadows here and there.

Coming back to earth I proceeded to examine with interest the three hundred and twenty-two entrants for the trial. The excitement was intense, and both building and yard hummed like a hive. Spasmodic pops and bangs and roars came from every quarter, tyres were violently pumped up, nuts and bolts tightened here and there, and refreshments tucked away in handy places. Only one oasis of calm did I see in all this. It was a four-seater Westwood containing two gentlemen coolly eating sandwiches, all tucked up ready to get away, quite half an hour before the start!

### Little Things of Note.

As my interest was in motor cycles and sidecars, I must not say too much about the car entries, but there were one or two ideas on the latter which appealed to my feminine mind. A little oil-cooled Belsize, though not carrying a lady passenger, had a maximum of comfort in every way, down to an air cushion, coffee in a Thermos, and sandwiches. One of the Morgans was carrying Mr. and Mrs. Morgan on their first London Land's End trial, and was excellently equipped for the journey. Both driver and passenger had air cushions, and they each had a hooter, while Mrs. Morgan was wisely furnished with a dinky little stone hot-water bottle. She was the only lady I saw wearing an ordinary little hat (of cerise suède)—all the other lady passengers had on orthodox driving helmets. Nevertheless she informed me that she was carrying one of the latter in case of necessity.

An A.V. 8 h.p. twin, though of rather an extraordinary appearance, seemed most comfortable. It is very low, and the engine is situated beyond the back axle. The bonnet concealed—nothing! and leg-room extended right to the end of it. In fact, there was nothing to prevent the passenger from going to sleep at full length.

### Sidecar Comforts.

There were fewer lady passengers both in cars and sidecars on this trial than in the London-Exeter at Christmas. It is undoubtedly a strain, this long, cold trip through the "wee sma' hours" when most people are tucked between the sheets, but I do not think I have ever seen more complete arrangements for comfort under the circumstances. Many ideas were worthy of standardisation, being thoroughly practical and obviously the outcome of much experience.

One of the Brough Superiors had a "Kangaroo" sidecar, so named, as readers may guess, because it carried the luggage in front. The entire front lifts up to allow the passenger to enter and a valise, etc., to be put in, and in this case it had a complete car dashboard fitted with switches, light, mirror, clock, and voltmeter. There were pockets on either side, and the lady passenger carried an electric torch. Thermos flasks containing respectively eggs and milk (which it was hoped would not curdle!), Bovril, and nuts ready cracked, were prepared for the interior comfort of the pair, and a nice little kangaroo mascot surveyed the world at large from the sidecar nose.

### Splendid Isolation.

Another outstanding feature was a hood on the Matchless sidecar occupied by Mrs. Collier. In this case the luggage was carried on the back, and the waterproof hood came right over it and buttoned on to the windscreen. A side curtain had its place on the engine side, and the whole thing looked wonderfully neat and comfortable. The only drawback seemed to be that the passenger could not speak to the driver with the hood up. An extra cushion and lots of chocolates completed this workmanlike outfit.

Nearly all the machines carried spare tyres with Parsons chains for the negotiation of Porlock Hill—the latter as usual the source of much anxiety—and Ingersoll watches predominated for timing. Most of the outfits carried three or even four watches, but I admired the faith of one Harley-Davidson driver—he carried one Ingersoll Midget. This driver (G. Dyer) had had a *brilliant* idea, and mounted an aero inspection lamp on the toolbox (on the tank) with a bolt. It was connected with the battery.

**Through Feminine Goggles.—**

Many of the machines had special legshields, but I think the cutest idea I saw was on the Dunelt. The large, round number plates on either side of the front forks were simply bent outwards to give the necessary protection. The passenger in this sidecar was of the male persuasion, and he looked quite happy on the cushions of corduroy velvet, and the ample waterproof apron seemed to obviate the necessity for a windscreen, which was missing.

FASHIONS FOR THE LADY MOTOR CYCLIST. The top left and right drawings show two styles of sleeveless leather waistcoats, one in yellow kid trimmed with brown suede and fastened with a belt and possessing pockets, the other in washable white doeskin without any trimming and fastened at the waist at both sides with one button. The centre sketch is one of the short fur sports coats that are being worn. For motor cycling grey lambswool is the most suitable material. Below are two hats suitable for either rider or passenger. (Left.) A close fitting turban cap of scarlet kid embroidered with oxidised thread and finished with a tassel. (Right). A light weight hat of green oiled silk with a front brim that affords protection from the glare of the sun. The trimming is a conventional design stencilled on the crown and a strap is fastened under the chin.

**Two Minutes with a Veteran.**

As I strolled along on my tour of inspection I saw a familiar figure on a Levis without whom no trial is really complete. It was "Pa" Appleby—cheery, weather-beaten, and ready for the road in his well-known sou'-wester turned back off his face. A black furry cat in a green ribbon ornamented the handlebars. "Pa" announced that he wasn't going to knock himself up this run, because of the coming T.T. I have seldom met so great an enthusiast.

**Feminine Kit.**

I should think the most critical of men have never seen a more sensibly garbed collection of ladies—and this without any loss of charm. Leather, wool, waterproof materials, and fur predominated. One lady was particularly neat and workmanlike in a brown leather coat, gauntlet gloves, gaiters, and a beaver-lined driving helmet. I should think it would be almost impossible to get cold in such a costume.

Another wore a Burberry over her leather jacket. Many wore just ordinary shoes and stockings, trusting to a travelling rug for warmth round the ankles. I only saw one lady with a muff—a most sensible thing to carry, as it is so much easier to slip one's hands out of than gloves, and is much warmer. Woolly scarves or mufflers were *de rigeur* round the neck, no furs at all being worn except in the form of a fur collar on a cloth or leather coat. Woollen, rather than skin, gloves also seemed popular.

**The Sporting Spirit.**

Although the drivers were all chivalrously concerned about their fair passengers' comfort, and anxious for them to rest or even sleep part of the time, I was glad to note the keen interest taken by the ladies in the active part of the run. Few intended to sleep at all during the night, and all were more or less responsible for the timing—not such an easy job as it sounds. Methods of carrying the route card were many and various—it was clipped in some cases to the sidecar windscreen, some hung from the driver's belt, some loose, but nearly all covered in celluloid and framed in leather. One driver had his strapped to his left arm—rather exposed, I thought, in the event of rain.

I think some of the ladies would like to have been driving their own machines, but, of course, such a thing is not yet permitted, though the reason is not obvious on trials of this description. After all, there is none of the danger of racing, and even ordinary speeding entails disqualification.

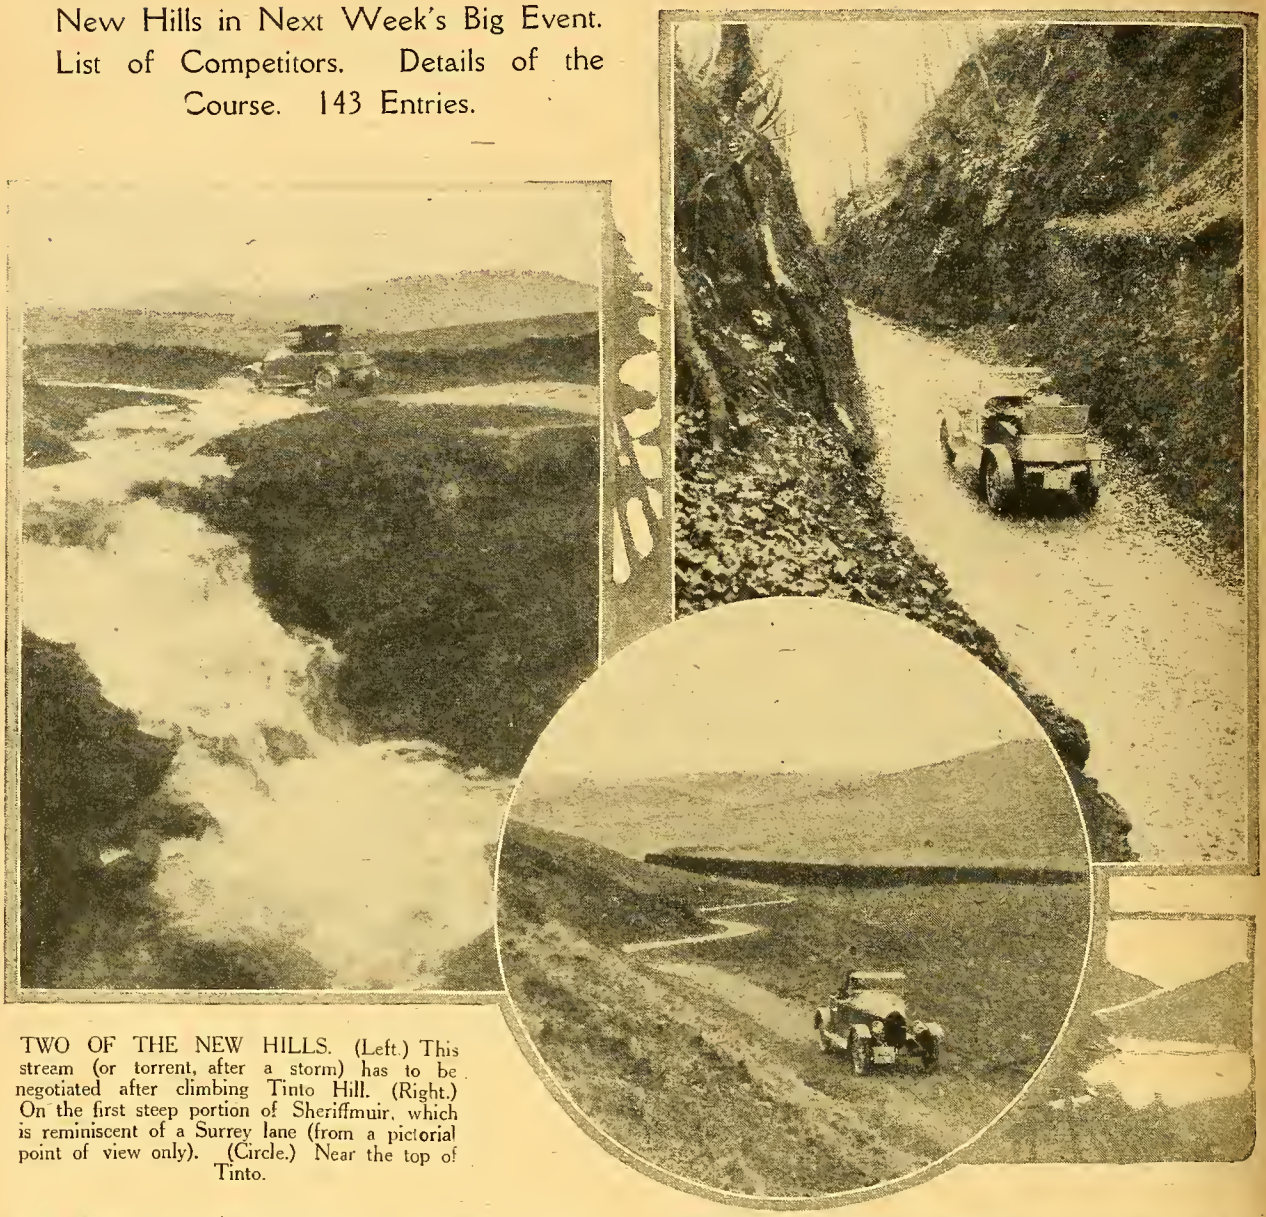
## DRIVING LICENCES IN FRANCE.

ALL candidates for driving licences in France must submit to a practical examination before a Government inspector. If the inspector is a practical motorist the examination is of real value; but if, as sometimes happens, the inspector's knowledge is entirely theoretical, and his time well filled up with other business, the candidate may get his *carte rose* without having given many proofs of his capability. The Government now seems inclined to rid itself of this task of granting driving licences and a Bill has been brought forward in Parliament and sent through to the Senate by the terms of which motor clubs and sporting associations will be entrusted with the duty and responsibility of conducting these examinations and granting certificates.

The change is not altogether an innovation, for already one or two French clubs are authorised to examine candidates for driving licences.

# THE SCOTTISH SIX-DAYS TRIALS.

## New Hills in Next Week's Big Event. List of Competitors. Details of the Course. 143 Entries.



TWO OF THE NEW HILLS. (Left.) This stream (or torrent, after a storm) has to be negotiated after climbing Tinto Hill. (Right.) On the first steep portion of Sheriffmuir, which is reminiscent of a Surrey lane (from a pictorial point of view only). (Circle.) Near the top of Tinto.

ON Monday next the Edinburgh Motor Club's Six Days Trials start from Edinburgh. As usual the event has attracted a large and representative entry. Owing to the earlier date than usual, this year the riders will not be taken very far north of the Caledonian Canal, but several new hills have been included, exclusive photographs of which are given on this page.

It is said, however, that the organisers of the trial are conscious that they have still found nothing to beat Amulree and Glendoe. During the wet Easter week-end a Scottish correspondent visited Sheriffmuir. This new hill, in the first day's run, is the start of a four-mile track leading to Sheriffmuir Inn, the scene of the battle of that name. The hill itself is hardly a mile long, and the only serious gradients are concentrated in three very short portions. The surface is very light soil with a foundation of rocks which jut through in places, some stones, and the usual cart-wheel ruts. It should be quite easy unless there is heavy rain at the time. After the hill proper there remain several sudden rises, with loose stones and lumps of rock, and there are two or three awkwardly concealed gulleys which make speeding inadvisable over this portion; also one bad water-splash.

Tinto Hill—a by-road over a shoulder in the famous low-land group of that name—is surely the easiest observed hill ever included in a "Scottish." Except for a short portion of loose stuff at the bottom, it is practically a top gear rise.

The following are the observed hills on the respective days:

First day. Sheriffmuir (special awards only), Amulree, Trinafour, Kenmore.

Second day. Cairn-o'-Mount, Rinloon, Cockbridge.

Third day. Abriachan, Glendoe, Inverfarigaig (special awards only).

Fourth day. Bridge-of-Brown, Cabrach.

Sixth day Talla, Tinto, Blackford Hill.

A map of the route is given on the next page.

## The Scottish Six Days Trials.—

## List of Entrants.

Rex G. Mundy (B.A.C. l.c.).
R. E. Fairley (A.B.C. l.c.).
H. Goring (2¾ Hawker).
H. S. Perrey (6 B.S.A. sc.).
B. L. Bird (6 B.S.A. sc.).
J. H. Walker (6 B.S.A. sc.).
A. F. Downie (7 A.J.S. sc.).
N. W. Downie (3½ Ariel).
A. L. Downie (2¾ Raleigh).
W. G. Donaldson (Royal Scot).
H. Mortimer Batten (3 Barr & Stroud Precision).
H. Greaves (2¾ Barr & Stroud).
A. G. Cocks (4¼ Beardmore-Precision sc.).
J. R. Alexander (3½ Douglas).
A. H. Alexander (3½ Douglas).
H. Alexander (7 Matchless sc.).
D. S. Alexander (7 Matchless sc.).
Maj. Johnstone (7 Jowett l.c.).
R. S. Macrae (7 Harley-Davidson sc.).
Miss Pullinger (Galloway l.c.).
P. Pehrson (4 Dunelt sc.).
B. H. Cathrick (4 Dunelt sc.).
C. W. Vallings (4 Dunelt sc.).
Geo. Grinton (7-9 Harley-Davidson sc.).
L. S. Sealey (4¼ B.S.A.).
M. C. Breese (4¼ B.S.A.).
A. A. Farr (4¼ B.S.A.).
D. S. Milne (10 B.S.A. l.c.).
A. W. Brittain (10 B.S.A. l.c.).
T. G. Ellis (10 B.S.A. l.c.).
H. Gibson (2¾ Raleigh).
J. Shepherd (8 Chater-Lea sc.).
D. C. Sangster (3½ Sunbeam).
J. A. Newman (3½ Douglas).
E. W. Choldcroft (2¾ A.J.S.).
W. H. Hardman (3½ Wilkin).
W. A. Hadfield (2¾ Raleigh).
E. Foster (5-6 Raleigh).
A. Rollason (3½ Ariel).
R. N. Lochhead (3½ Ariel).
L. Newey (8 Ariel sc.).
J. L. Stocks (8 Ariel sc.).
W. Woodcock (8 Ariel sc.).
Geo. Nott (7 Matchless sc.).
Mrs. Knowles (2¾ A.J.S.).
R. M. Knowles (3½ Norton).
B. Jowett (7 Jowett l.c.).
W. Jowett (7 Jowett l.c.).
R. B. Clark (3½ Zenith-Bradshaw).
T. T. Sibley (3½ Rudge sc.).
J. H. Mathers (3½ Rudge).
R. R. Grindlay (3½ Rudge).
W. L. Danskin (7-9 Rudge sc.).
G. W. White (7-9 Rudge sc.).
E. S. Astley (7-9 Rudge sc.).
D. A. Aitkin (2¾ Francis-Barnett).
E. A. Barnett (2¾ Francis-Barnett).
S. M. Greening (2¾ Francis-Barnett).
G. M. Black (3½ Norton).
J. D. Price (3¾ Scott).
W. Moore (3¾ Scott).
W. L. Guy (3¾ Scott).
G. W. Scott (3¾ Scott).
R. W. Stansfield (3¾ Scott).
R. Carfrae (3½ Rudge).
E. R. C. Scholefield (9-10 New Hudson).
D. Parsons (7 Matchless sc.).
E. H. Gifford (3½ Martinsyde).
A. A. F. Symes (6 Martinsyde sc.).
W. H. Bashall (6 Martinsyde sc.).
J. T. Bashall (6 Martinsyde sc.).
B. Kershaw (2¼ New Imperial).
D. B. Calder (2¼ New Imperial).
G. K. Hubbard (2¾ New Imperial).
J. M. Philpott (2¼ Velocette).
W. Westwood (3½ Triumph).
A. Brown (8 Ariel sc.).
John Stirling (2¾ A.J.S.).
R. Lewis (4½ P. and M. sc.).
P. Cunningham (4½ P. and M. sc.).
G. M. Townshend (4½ P. and M. sc.).
Armstrong Graham (Harper Runabout).
R. O. Harper (Harper Runabout).
J. A. Porter (3½ New Gerrard).
J. G. Porter (2¾ New Gerrard).
R. M. Wishart (3½ New Gerrard).
W. Wilkie (American Henderson sc.).
Mrs. Hardee (7 Matchless sc.).
H. H. Vaughan-Knight (G.W.K. l.c.).
— Pope (G.W.K. l.c.).
— Jackson (G.W.K. l.c.)
A. B. Fairley (3½ Douglas).
J. B. Sanderson (2¾ Hawker).
C. A. Heashaw (4¼ Hawker).
W. C. Brookes (7-11 Marseel l.c.).
D. Brown (10 Salmson l.c.).
R. Spence (3½ Sunbeam).
L. Paynter (3½ Norton).
H. Collins (3½ Norton).
H. P. Horwood (3½ Ariel).
R. Humphries (2¼ Velocette).
W. S. C. Walker (6 Douglas sc.).
E. Wardlaw Ramsay (2¼ Velocette).
Geo. Brough (8 Brough Superior).
J. A. W. Bourne (8 Brough Superior).
F. B. Dickson (8 Brough Superior).
J. Richardson (5 Lea-Francis sc.).
A. Lea (3½ Lea-Francis).
R. P. Ransom (3½ Lea-Francis).
W. E. McKechnie (5-7 McKechnie).

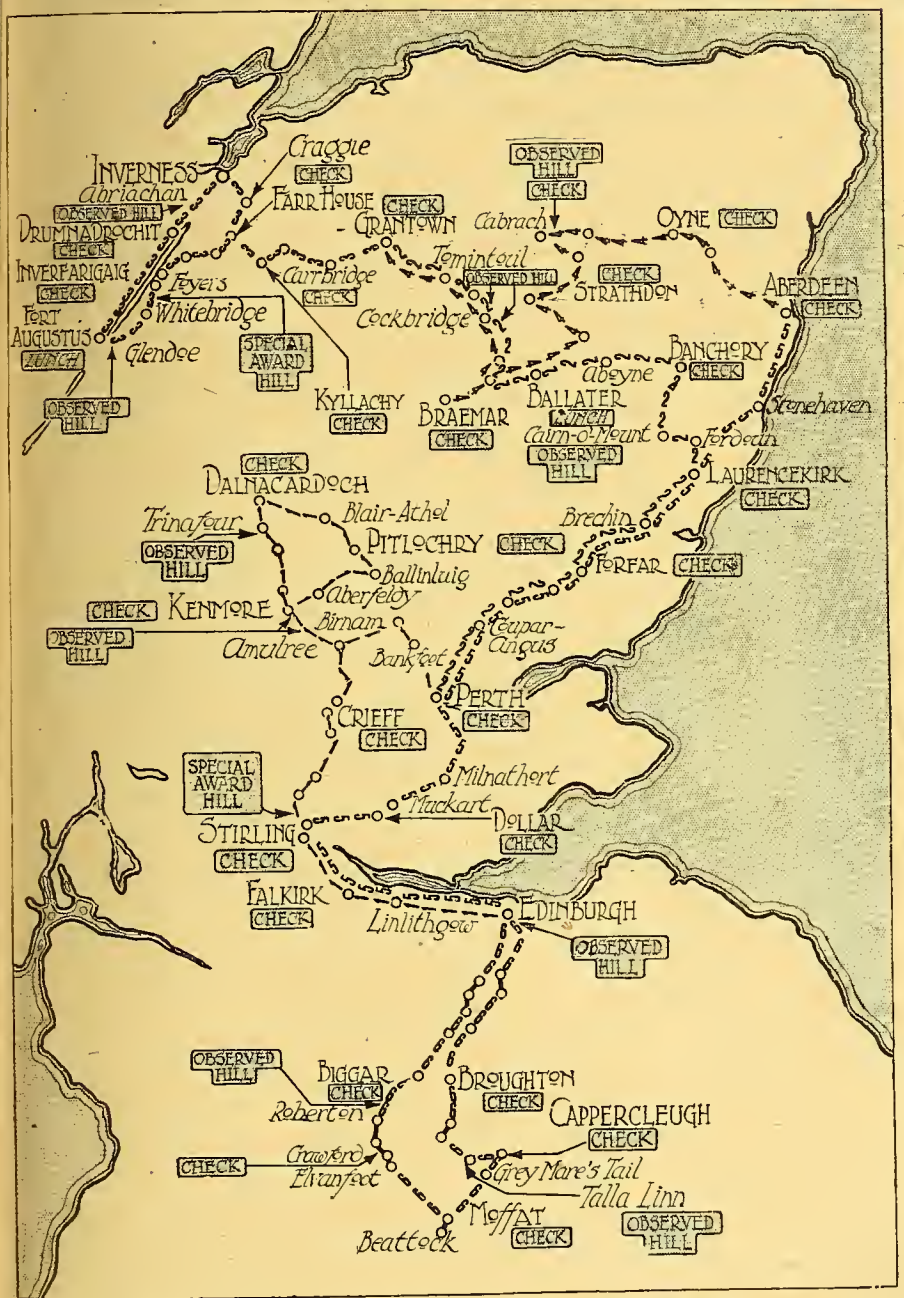
R. H. Forrester (11 Riley).
V. Walsgroove (11 Riley).
J. R. Fellows (3½ Sunbeam).
C. Guthrie (5 Raleigh).
W. E. Smithie (3½ Norton).
—— (2¾ Royal Scot).



The Scottish Six Days Trials route in detail. The course for each day is indicated by the appropriate figure.

Considering the expense of participating in an event of six days' duration this is a wonderful entry, and testifies doubly to the popularity of the trials as a testing ground for manufacturers and as a holiday for private owners—providing, in the latter case, that the weather is better than it usually is in May!

# Road Impressions of the Scott Squirrel

Comfortable Riding Position, Acceleration and Smooth Running are Features of the Sporting Scott.

By H. MORTIMER BATTEN.

THOUGH at one time the Scott was far and away the writer's favourite mount, and many thousands of miles were covered annually on the famous two-stroke, it so happens that during the last three or four years this make has been conspicuously absent from the chosen few. This, of course, was merely a matter of chance.

But old friends do not meet as strangers, though on the surface of things the specification of the Scott Squirrel with its hot-stuff engine and gear ratios of 3·75 and 5·4 seemed rather forbidding!

The approach to the Scott works is rather typical of the kind of thing that the sporting Scott crew revel in. Leaving the works one progresses for a hundred yards or so over a stretch of road evidently begotten of a volcanic disturbance, thence through a knee-deep quagmire round a right-angle corner and straight up a severe and rutty gradient to the greasy tramway sets.

Once astride the machine, however, there was absolutely no further thought as concerned the road conditions. As a rule it takes a little while for one to feel completely at home on a strange machine. Not so the Squirrel. The most nervous rider could not help but lose all sense of nervousness immediately he found himself gripping those extremely businesslike bars.

### In Traffic.

Owing to fog and the appalling condition of the roads, I had decided to take the way of least resistance, namely, *via* Otley, Wetherby, York, and thence north and east. By the time I had arrived at Otley, however, my blood was up. Why funk Sutton Bank and the stretch of colonial road thence to Helmsley?

### Main Road Impressions.

One thing that strikes one immediately is that the Squirrel engine is a much better engine than anything of the kind that has preceded it. Not only is it more controllable and more efficient, but the balance is better—or at any rate there is considerably less vibration. This is due to some extent to the modifications in the frame design. There is no whip on the new frame. It is rigid. Also, of course, the engine is smaller, and the reciprocating parts are lighter — aluminium pistons, etc. Vibration is no more noticeable in the case of the Squirrel than it is in the best opposed twins, and though the chains were distinctly on the slack side, the old irritating snatch was gratifyingly absent.

Skirting Harrogate, the road *via* Ripley, Ripon, and Thirsk contains some fine speed stretches, but the engine being so new prudence forbade anything approaching full throttle. At 45 m.p.h one was progressing at a comfortable purr. One had no impression of a high road speed, as the cornering of the machine and the riding position are in accordance. Fifty on the Squirrel does not seem so fast as thirty-seven on the ordinary roadster, and on anything like a main road it should be possible to *average* 35 m.p.h. without taking a single risk and without any sense of strain.

In Thirsk a cab horse, complete with cab and old lady, meandered out of a side road on the wrong side, and proceeded to shuffle across the thoroughfare. Ordinarily one would have applied both brakes and come to a sudden stop, with appropriate glances at the cabby. Not so on the demoralising Squirrel. One opened the throttle, looped the loop round the growler, and roared off with rumbling exhaust amidst the wide-mouthed gaze of the populace. At least, that is how one pictures the populace.

### The Shadows of Sutton.

There is always an atmosphere of romance in approaching Sutton from the fertile but thinly peopled stretches of the plain. The great bank, crowned with a shimmer of blue pines and wildly timbered along its boulder-covered slopes, rises like a survival of another age from the agricultural lands, and on striking it civilisation dwindles to the rear, and beyond lies—the tundra! Wild moorland country, for the most part, yet providing endless surprises in its hidden-away little valleys, which for simple beauty have a charm quite their own.

By now the fogs of manufacturing Yorkshire were left far behind, and Sutton looked more than ever mysterious—languid with a damp and chilly beauty which was distinctly of the winter. From half-way down to the summit white strata of cloud streaked the slope, and the summit rose like a giant's castle from above the clouds, the effect being rendered more grotesque by the bright sunshine which reached only to the topmost ridges.

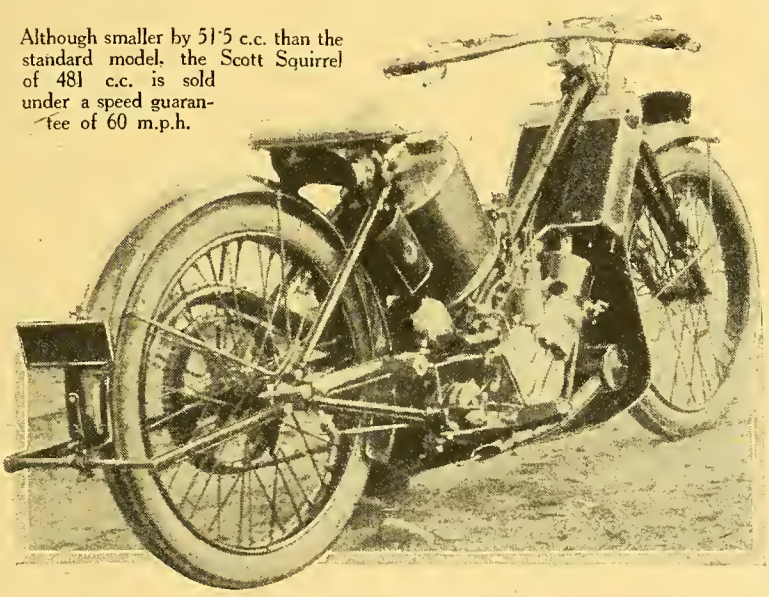
**Road Impressions of the Scott Squirrel.—**

At Sutton village I asked a cyclist what the hill was like. He said that he had never seen it worse, and that no motor vehicle had attempted it for several weeks. He recommended an alternative route, but the climb was finally tackled.

Those who know Sutton in the summer time have probably no great opinion of it. Its worst gradient is 1 in 3.96, but the road is more or less a main road. I have climbed it easily on an opposed twin which was missing continually on one cylinder, but this day I was to have the surprise of a lifetime. The hill was just about equivalent to Park Rash, but with deep mud instead of stones.

On the first attempt I failed miserably. One piston seemed rather inclined to grip, so I got the wind up and closed the throttle. Having sat for a minute or two, throwing snow at the radiator, I descended and made a second attempt. This time I got fully half-way up the first bad stretch on top gear, changed down, and climbed the 1 in 4 section easily. Fearful for the new engine, I rested a minute or two, restarted on the 5.4 to 1 gear without difficulty, and crept in a comfortable and easy fashion to the top.

Here, for the next ten miles or so, the roads were truly colonial—deep ruts, wet, bottomless sand and the like, supplementing a return of dense fog, while the way is tortuous, with many stunning little ascents and descents which take one by surprise. It was for such conditions as these that I had thought the high gear ratios would prove farcical, but it was surprising how the engine pulled and kept on pulling at a low rate of revolutions and over the most trying going—including deep, sodden snow. This improved flexibility is a great point about the latest Scott.



Although smaller by 51·5 c.c. than the standard model, the Scott Squirrel of 481 c.c. is sold under a speed guarantee of 60 m.p.h.

**Gear Ratios.**

A word now regarding the gear ratios and all they involved. My bottom gear was higher than the standard for Squirrel machines, which is 6.9, but despite the fact that most of my riding is in hilly moorland country, I think I would prefer the 5.4 bottom to the 6.9. In the first place it is much more sporting, and seems adequate even for abnormal conditions. In the second place it is safe and practical to ride the Squirrel at much higher speeds over difficult country than one would ride any ordinary machine, so that whereas 5.4 would be hopeless on most machines, even though one possessed a more powerful engine, the unique qualities of the Squirrel render it quite a practical ratio. The machine climbs wonderfully on its top gear, and, since it will do 45 m.p.h. on bottom, the change down can be made advantageously at 30 m.p.h., and that speed maintained without much regard for grease, corners and the like.

Summing up, the Squirrel is a very delightful solo mount, and though a considerable distance has now been covered on it, I have no criticism to offer. Among sporting machines it is distinct in that it is not solely and essentially a speedman's mount. It is the safest machine I have yet straddled, and though an inexperienced rider would be ill-advised to go in for the very high ratios, which might lead him into the abuse of his engine, I can imagine no safer and better type of motor bicycle for the man of nerves than a suitably geared Scott Squirrel.

## ROMANCE AND THE SIDECAR.

APROPOS the sidecar as a means of transport, and in proof of its popularity in Italy, we reproduce the following translation of a "Eulogy of the Sidecar," which recently appeared in a number of the *Sport Illustrato* of Milan:

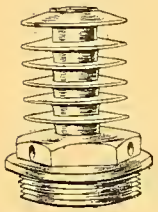
"'Tween the mud and the tempest, amid the hidden snares of the night, the 'sidecar' has won her battle; the timid anxieties of the critics have been calmed by a triumph which even the warmest supporters of the motor cycle and sidecar did not dare to hope for.

"All praise to the 'combination.' She represents a practical means of transport; she asks for but very little spirit for her nourishment; and yet she ascends swiftly to every summit, overcomes every obstacle, carries man and his companion everywhere where the fever of commerce and the desire for fresh beauties impel and entice.

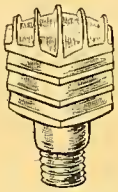
"Here is the picture: the handsome knight, enclosed in his armour (read 'overalls'), in a statuesque posture holds the reins of the impatient horse of steel which devours the road in a cloud of dust. Reposing in the sidecar, like a jewel in its case, the whole being of the little lady palpitates in the delicious throes of 50 and 60 miles an hour.

"We delight in the intoxicating speed, in the solitude (for two), under the fascination of the magnificent sights which Nature offers."

## Exhaust Valve Cooling.

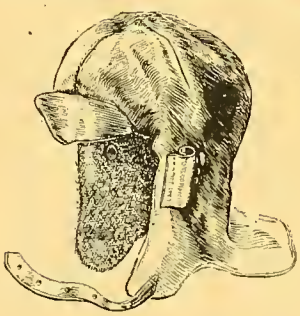


Radial holes in the hexagon portion leading to a hollow central column assist heat dispersion in the Airco exhaust valve radiator. 10s. (A. W. Gamage, Ltd., Holborn, London. E.C.1.)



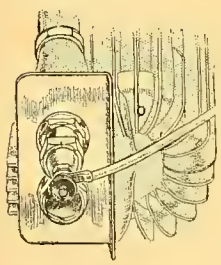
It is claimed that the fin area of the E.W.L. radiator is greater than any other type at present in use; it has a ¾-in. Whitworth thread and is intended to be screwed permanently into the valve cap. 3s. (The E.W.L. Accessories Co., 102, Lanchester Road, Shrewsbury Road, Forest Gate, London, E.7.)

## Head Protection in Winter.

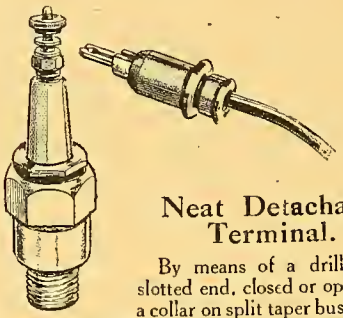


Made of very supple leather and lined with wool, this racing helmet is sold by A. W. Gamage, Ltd., Holborn, London, E.C.1, at 9s. 6d.

## Cooling the Cylinder Head.

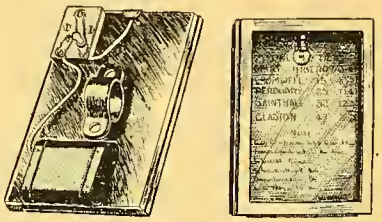


Simply a rectangular piece of sheet aluminium with two holes and a bent edge, the device illustrated forms a neat and inexpensive radiator for Douglas valve caps. (M.E.A., 25, Charlotte Mansions, Baron's Court, London, W.14.)



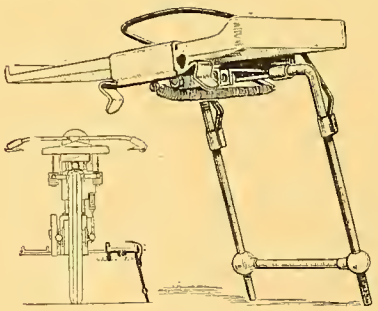
## Neat Detachable Terminal.

By means of a drilled and slotted end, closed or opened by a collar on split taper bushes, the Grose plug terminal is both quickly detachable and very secure when in position. (James Grose, Ltd., 4, Old Jewry, London, E.C.2.)



## For All-Night Competition Riding.

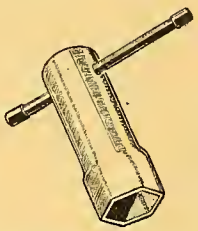
Competitors in all-night trials will appreciate the advantages of this waterproof, enclosed and dry-battery illuminated route card holder marketed at 15s. 6d., by E. S. Ramstedt, Seymour Road, Gloucester.



## Improvements to a Prop-stand.

Already illustrated in *The Motor Cycle*, the Bellairs prop-stand has undergone certain modifications. The diagrammatic inset shows exactly how the device is fitted and operated. (Mowbray, Bellairs & Co., 24, Little Chester Street, Belgrave Square, London, S.W.1.)

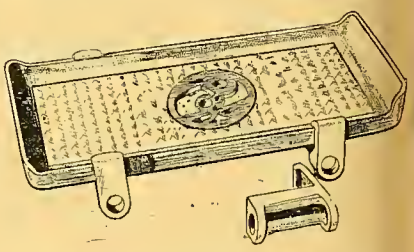
## Sparking Plug Box Spanner.



Where there room to use it, th Runbaken sparkin plug box spanne certainly provide more humane treat ment than does th popular "6-inch ad justable." It is well made article 2s. 9d. (The Run baken Magneto Co., Ltd., Cheetwood Lane Derby Street, Manchester.)

## Safe Solution Storage.

There has been considerable discussion recently as to the best method of carrying rubber solution in the tool-bag; as a result, A. W. Hirst of Chardin Road, Turnham Green Terrace London, W.4, has now introduced a special tubular brass holder with screw-top and metal tongue at 9d. and 1s. (nickel-plated).



## Conversion from Rests to Footboards.

Illustrated is one of an attractive looking pair of footboards designed for machines having footrest rods of various dimensions; the aluminium clamps may be placed in any position. 16s. 6d. (The Service Co., Ltd., 289, High Holborn, London, W.C.1.)

## Foiling the Motor Cycle Thief.

So mystical are the rites necessary to open this simple-looking combination lock that it might mar the efficiency of the device if we attempted an explanation; suffice to say that a key is only supplied to change the combination. 7s. 6d. (The D.O.T. Keyless Locks Co., Ltd., Northampton.)

# T.T. Notes and News

## Latest Jottings from the Isle of Man and the Competition Stables.

AT the moment of writing, the T.T. entries stand as follows: For the Lightweight class, 32; for the Junior event, 38; and for the Senior race, 67, making a total of 137 in all.

* * * *

Considerable activity is being displayed by various competitors on the track, and many experimental features are already being tried out at Brooklands.

* * * *

The two larger New Hudsons will closely resemble the 4½ h.p. model, but the bore will be reduced to 79.5 mm. (100 mm. stroke). These machines will be ridden by B. Bourke and E. Mundey; one of these riders, probably Mundey, will ride in both events.

* * * *

There is likely to be something of a sensation upon the appearance of the 350 c.c. New Imperial, and though at the present moment we are not permitted to give details, it is safe to say that the engine will have overhead valves. D. Prentice will, of course, defend his title in the lightweight race, and H. Le Vack will ride both in the 350 c.c. race and in the 500 c.c. race; in the latter event he will be mounted on a 350 c.c. model.

* * * *

Very few modifications have been made in the Norton for the forthcoming race. The engine remains as before, and a short wheelbase frame similar to that used in last year's race will be employed. A separate oil tank is attached to the saddle tube, and the pump is operated by foot; a Webb brake in front and a slightly modified internal Vee brake at the rear will be relied upon for deceleration. 550×65mm. tyres will be fitted.

* * * *

A considerable amount of experimental work is being carried out with the Levis T.T. machines, but the details of the engine have not yet been decided. With the exception, however, of comparatively small items, there will be no change from last year.

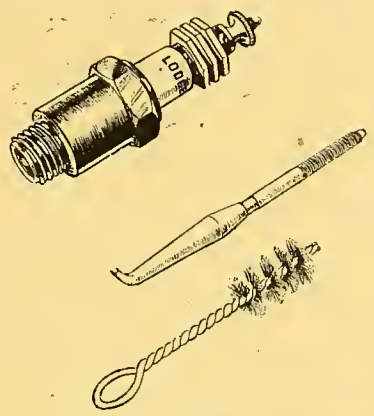
* * * *

Chain-driven Coulsons will make their first appearance in the forthcoming Tourist Trophy Race. These will be the forerunners of an all-chain model, which will probably appear on the market for 1923. One 350 c.c. machine and two 250 c.c. machines will compete, all three being fitted with overhead valve Blackburne engines. But little alteration has been made to the Coulson frame, though the wheelbase is somewhat shorter and a separate oil tank is fitted. All machines are shod with 26×2½in. tyres, and there is a distinct probability that some form of mechanical lubrication will be embodied in the design.

A special department has been set aside at the New Hudson Works for preparing the competing machines, and great activity prevails. In the 250 c.c. class the New Hudson will be represented by a two-stroke which varies but little from the standard machine, except that ball bearings will be fitted to the crankshaft.

* * * *

The engineers' lock-out will be responsible for at least one disappointment to keen motor cyclists, since owing to this cause Barr & Stroud, Ltd., will in all probability be unable to complete their special sleeve valve Tourist Trophy engine, and consequently several entries of this type have been withheld. This



A new Lodge racing plug showing cooling fins, heavy copper electrode (detached) and cleaning brush.

is most unfortunate, since the performance of the sleeve valve engine would have been keenly watched.

* * * *

Mechanical lubrication by a special pump will be a feature of all the New Imperial machines. In the 250 c.c. class, side-by-side valve J.A.P engines will be employed with the semi-unit system associated with the New Imperial name. The three-speed gear box is carried on the rear engine plates, and the whole unit is slung in a special loop frame. A tool box is clamped down on to the top of the tank, gripping the top tube; oil is carried in a separate compartment and an auxiliary foot-operated oil pump is incorporated in the design. Cox carburetters, Brampton forks, and internal expanding brakes, those at the rear being operated by a pedal from each side of the machine, are further features. It is not at all unlikely that an overhead valve-engined machine will take part in this race. Engine shaft shock absorbers will be fitted in all cases.

All Fellows magnetos fitted to T.T. competing motor bicycles will be painted red.

* * * *

Indians remain the only overseas entries; after continued fine performances they deserve good luck.

* * * *

Additional entries at ordinary fees have been received from Roberts and Hibbs (New Scale), driver R. Gray, and E. H. A. Humphries (O.K. Junior), driver W. L. Handley.

* * * *

It is now ruled that machines competing in the Lightweight class which perform so well that they qualify for an award in the Junior race must be entered in that event also before an award can be given. This accounts for the extra entries being received at ordinary fees.

* * * *

N. Hall, F. C. North, and W. L. Handley have been chosen to ride the O.K. Junior machines. A very neat little machine has been evolved which is engined with a 2¾ o.h.v. Blackburne. Most of the frame lugs are machined from steel billets, and a very powerful parallel action, internal V, rear brake is operated by pedals from either side of the frame.

* * * *

Already the Norton contingent is looking round the course, and a few trial runs have been made by R. T. Cawthorne (Leeds), J. W. Shaw (Belfast), and W. Mansell. Mr. J. L. Norton was there also, but the bad condition of the surface prevented them making proper "lap-time" tests. The weather was good, but there was snow on the mountain road. One of the Nortons is of the o.h.v. type.

* * * *

A 250 c.c. Francis-Barnett will be ridden by R. W. Loughton. This little machine, which has already been dispatched to its owner, has a 65.5×76 cm. side-by-side valve J.A.P. engine similar to that employed by last year's winning New Imperial. A three-speed Sturmey-Archer gear box with five plate cork clutch is fitted, the drive being by chain throughout. Frame and fittings are to all intents and purposes Francis-Barnett standard practice, but the tank is enlarged to hold nearly two gallons.

* * * *

Another private entry is that of J. Joynson, who will ride a 250 c.c. Invicta-Jap, a pretty little machine with chain drive throughout, large saddle tank, Webb front brake, and Sturmey-Archer gear.

* * * *

It is a promising symptom to find that both Francis-Barnett and Invicta lightweights are fitted with 26×2½in. (Palmer) tyres.

The Island is literally buzzing with steam-rollers, and everyone is doing his best to make a success of the T.T.

* * * *

One of the youngest riders in the races is Hamlet Burrell, who is only 18½ years of age. He is one of the Rudge stable.

* * * *

As in former years, coffee will be provided to every competitor during the early morning practising by the Dunlop Rubber Co., Ltd.

* * * *

The entire marshalling of the course, both for practising and racing, will be undertaken by the Manx M.C.C., whose work was so efficient last year. Dr. Pantin will be the official doctor at the start.

* * * *

An appeal is made by the A.C.U. for marshals at various points of the T.T. course. Those who are anxious to offer their services are requested to apply to the Secretary, 83, Pall Mall, London, S.W.1.

Chocolate, red and green, the colours worn by the Tanks and Armoured Car Corps, have been adopted as the official colours for the T.T. races by Humphries and Dawes, Ltd., for their O.K. Junior motor bicycles. The headquarters of the firm will be the Villiers Hotel, Douglas.

* * * *

Great indignation is felt by the Isle of Man authorities that the crane which it was stated would be erected before this year's T.T. races will not be forthcoming. The entire blame is put upon the British Government, who refuse the sanction for it for this year until they are certain that the pier is strong enough to stand the strain and the weight. The £5,000 involved is I.O.M. money, and the Manxmen are most indignant that they are not allowed to spend it.

* * * *

Naturally great interest is being displayed with regard to new comers to the Tourist Trophy and equally in the machines produced by firms who have not been represented for some years past.

A. E. Taylor, who rode a B.S.A. in the 1921 T.T., where he made some very fast laps but could not finish owing to engine trouble, is now riding under the Rudge colours.

* * * *

The standard Nortons are fast enough to win, and the appearance of a new o.h.v. model which has already done wonders on Brooklands will be keenly watched.

* * * *

The Rudge machines will be ridden by W. L. Danskin, J. A. Watson-Bourne, R. B. Ewens, J. H. Mathers, H. Riddell, O. Baldwin, and A. E. Taylor.

* * * *

A new racing plug by the famous house of Lodge has recently made its appearance, and is likely to be seen in the Isle of Man. It has a particularly heavy copper electrode, which is easily detachable. The gap is adjustable, and brass fins are fitted at the top. A small "flue" brush is supplied for internal cleaning purposes.

# WEATHER PROTECTION ON TWO WHEELS.

## Well known Scottish Competition Rider Designs a Single Track Carette.

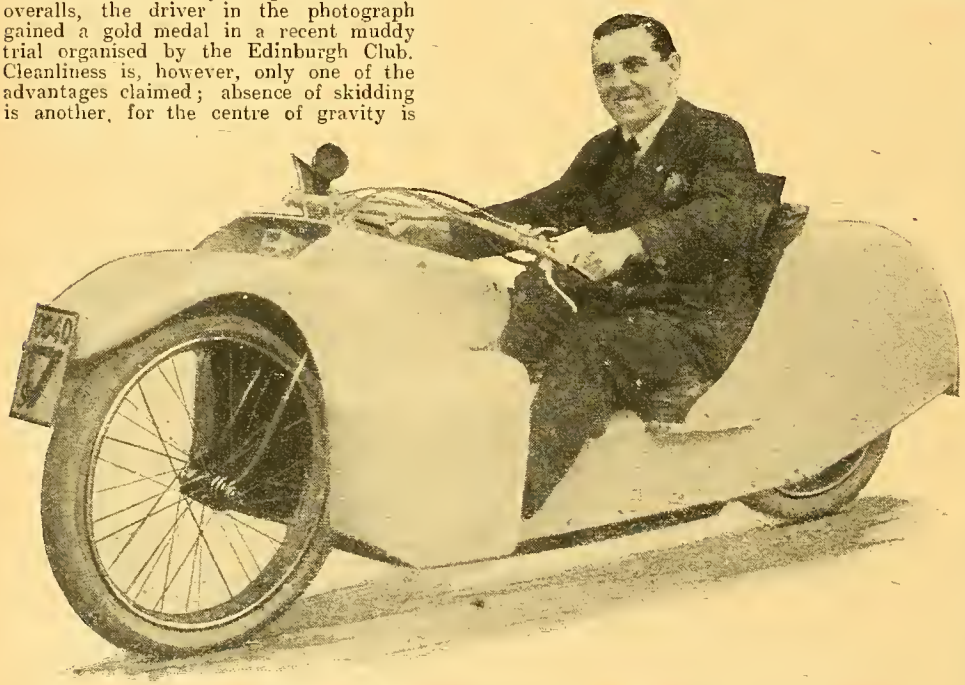
"CAR comfort on two wheels" has become so trite a phrase that we hesitate even to use it, but nevertheless it conveys more adequately than otherwise possible the aim of Alexander Motors, Ltd., in producing the vehicle illustrated. Incidentally, the designer, Mr. A. H. Alexander, is the well-known Scottish competition rider.

### Trials Riding in Ordinary Clothes.

At the outset, it may be stated that, clothed in an ordinary lounge suit without overalls, the driver in the photograph gained a gold medal in a recent muddy trial organised by the Edinburgh Club. Cleanliness is, however, only one of the advantages claimed; absence of skidding is another, for the centre of gravity is low; and cheapness of production should eventually be a third, for the only "finish" consists of enamelling the outer shell, the other parts being "waterproofed," as on a car. Finally, comfort for the rider figures largely in the design, which is sprung front and rear, and provided with a large cushion seat and backrest; and, if that is not enough, windscreen will be added, and probably a waterproof apron.

At present the design is, of course, in an experimental state, but its possibilities have been proved on the road; and it is hoped that it will not share the usual fate of the unconventional.

The pressed steel frame is of rectangular form, 12in. wide, to which is attached an ordinary type ball head, into which fits a pair of front spring forks somewhat resembling the original Indian type. The rear wheel is fully supported on a hinged fork, which is held up by a pair of leaf springs; owing to the width of the bearing, 11in., absolute rigidity is claimed. The petrol tank is set over the top of the very wide front mudguard enclosed in a housing of sheet metal, which forms a large air duct through which the air passes on to the top of the cylinder past the engine and out at the back of the under-cover. Engine and gear box are enclosed in sheet metal covers which are easily detachable, and are entirely protected from mud or rain.



Clothed as he is, without overalls, H. E. Fairley drove this carette through a muddy Scottish trial.

### Accessibility.

A pressed steel guard of considerable width encloses the rear wheel, the centre panel folding up on hinges, permitting extremely easy access to the wheel tyre, and final chain. The wheel can be detached and lifted out from above.

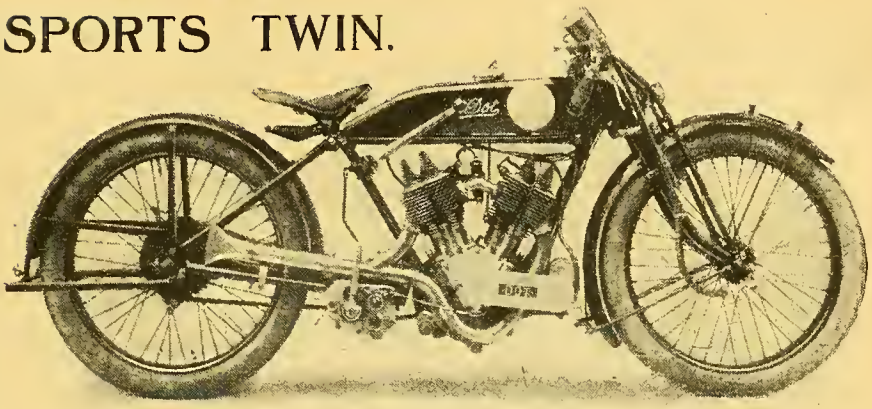
On the present model the wheelbase is 60in., but this was purposely lengthened to see whether it made any difference to the stability.

Final choice of engine, probably a 500 c.c. single, and gear box will be made later; and, surprising as it may seem, the possibility of fitting a sidecar has been seriously and favourably considered.

# AN 8 h.p. SPORTS TWIN.

## New Dot Model for Solo or Sidecar.

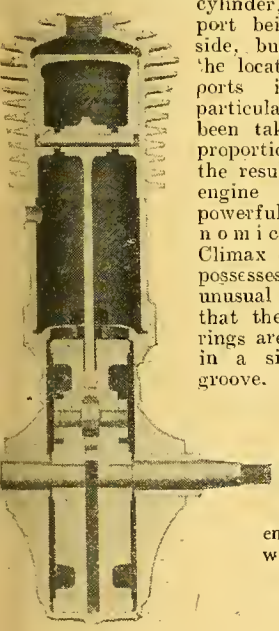
) NE of the most attractive-looking big twin sports models that we have yet seen is now being placed upon e market by Dot Motors, Ltd., Arundel reet, Hulme, Manchester. Fitted with e latest side-by-side valve 8 h.p. J.A.P. gine, three-speed Sturmey-Archer gear d all-chain drive, it is eminently suited · fast solo work. A saddle tank and a ecially constructed frame with duplex ver tank rails are distinctive features. Saxon forks, Amac carburetter, and I.C. magneto form part of the specifica-n, and sidecar lugs are incorporated in e frame. The machine may be supplied her with or without carrier.



A sporting twin of big capacity: the 8 h.p. Dot.

## A TWO-STROKE WITH INSIDE FLYWHEELS.

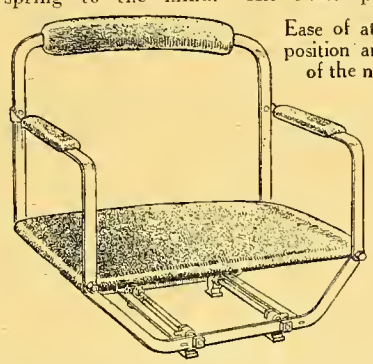
) NE of the few two-stroke engines to hold long-distance records at Brooklands is the little 293 c.c. Climax, · on July 12th last this plucky tle power unit fitted to a New Comet ptured the four, five, and six hours' and e 200 and 250 miles records in Class B/S or 350 c.c. machines with sidecar). In outward appearance the Climax has e outstanding feature, for it is practi-lly the only two-stroke in existence th inside flywheels. The crankshaft is the normal built-up construction, ving a single row roller big end and ng plain main bearings. It is claimed the manufacturers that these inside wheels provide remarkably smooth nning, and from our own experience we n testify that the engine is very smooth action. All three ports are cast in the cylinder, the inlet port being at the side, but although the location of the ports is normal particular care has been taken in the proportions, with the result that the engine is both powerful and economical. The Climax engine also possesses one other unusual feature in that the only two rings are contained in a single wide groove.

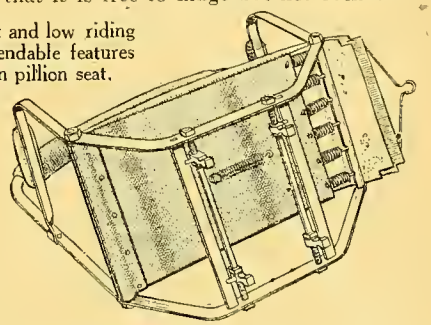


Section of the 350 c.c. Climax two-stroke engine, fitted with inside flywheels.

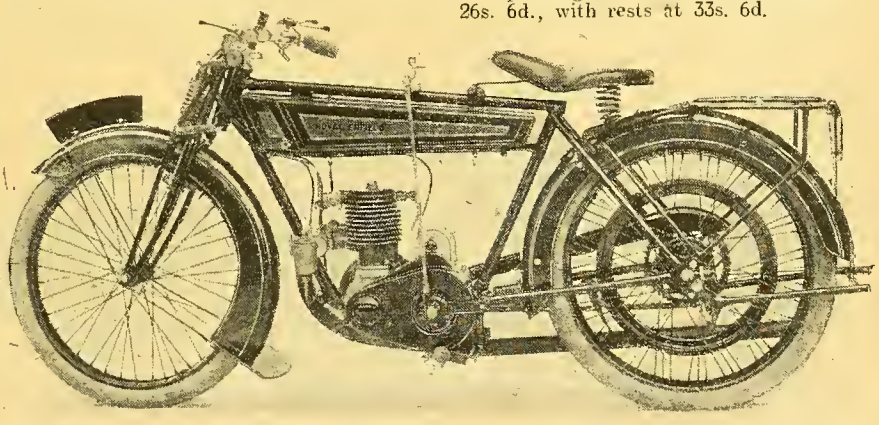
## A SIMPLE PILLION SEAT.

IF a pillion seat is to be attached to the carrier of a motor cycle there are certain important points to be considered. Comfort, absence of side rock, low position, and ease of attachment are obviously amongst the desiderata that spring to the mind. All these points have been carefully studied in the construction of the new Austin pillion seat, marketed by W. H. Jenks, 63, Snow Hill, Birmingham. To begin with, the strip steel framework is attached to the carrier by screw expanded blocks, which take but a minute to adjust. Secondly, the well-padded seat lies on a spring steel plate, which extends for the full width and the greater part of the length of the frame. This plate is folded over one of the frame cross-bars and is riveted in position so that it is free to hinge but not rock sideways. The opposite end of the plate is attached to another cross-bar by six tension coil springs, and when unloaded the whole arrangement lies flat and occupies but little room. The seat weighs 6lb. The complete device is well finished and upholstered with saddle leather and felt padding. The seat alone retails at 26s. 6d., with rests at 33s. 6d.



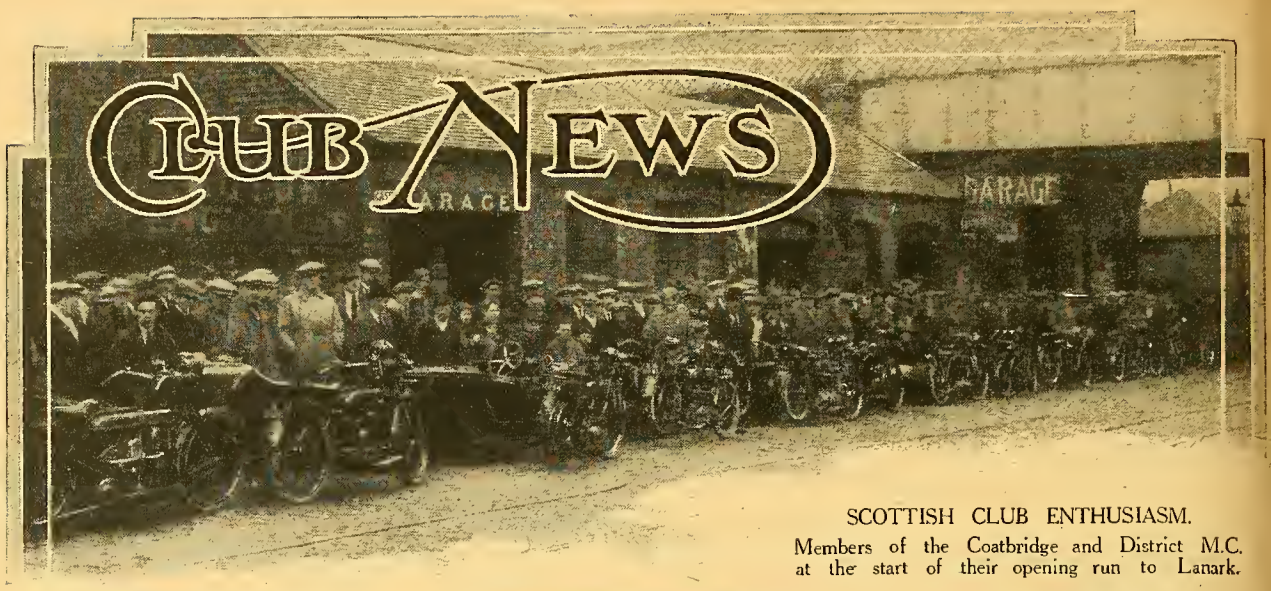


Ease of attachment and low riding position are commendable features of the new Austin pillion seat.



A TWO-STROKE SPORTS MODEL. This addition to the Enfield range possesses larger ports than the standard two-stroke. T.T. handle-bars and adjustable footrests combine to make it quite an attractive-looking machine.

# CLUB NEWS



SCOTTISH CLUB ENTHUSIASM.
Members of the Coatbridge and District M.C. at the start of their opening run to Lanark.

### West Birmingham M.C.C.

Notwithstanding the stormy weather experienced, seventeen members turned out to the opening run, a paper chase, organised by the captain and vice-captain. The latter were the hares, and led an intricate trail across Clent to Kinver, thereby successfully frustrating the followers. Though many went widely astray, all but one finished in time to enjoy a welcome tea at the Stewpony Hotel.

### West Sussex M.C. and L.C.C.

With a view to stimulating interest in its activities, the Club, which has just completed a very successful inaugural year, recently held a dinner at the Globe Hotel, Chichester. Mr. E. Harrison presided, and there was a delightful absence of formality about the proceedings of the evening.

### Rugby M.C.

If the entry list in the recent hill-climb at Edgehill was not a long one, the event did not lack interest in the matter of the speed of the machines entered, or as a sporting meeting. The course measured about five-eighths of a mile, and the fastest time recorded was 50 seconds, being made by G. Le Champion on a 3½ h.p. Sunbeam. As the hill had not been closed to ordinary traffic, the waits between individual performances were apt to be overlong, for competitors were obliged to give precedence to any passing traffic. # Letters to the Editor

The Editor does not hold himself responsible for the opinions of his correspondents.

**Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address.**

## *IS THE GAME WORTH THE CANDLE?*

Sir,—Having read many letters on this subject, I should like to relate my experience in the "Mellano" Cup Trial. It was a very naughty, sporty course.

I had finished the morning section with 30sec. error, had done everything I was told to in the afternoon section, and was about 150 yards from the finish when a large car, travelling at speed, knocked me out, and all my hopes went west.

But I am looking forward to my next stunt, hill-climb or otherwise, and still most emphatically consider that competition riding is the finest of all sports, and well worth the candle. REG. GREEN.

## *LIMITED SADDLE ADJUSTMENT.*

Sir,—May I make a plea for greater latitude of adjustment of the saddle? I have never yet ridden a machine on which it was possible to have it too low; but with plenty it is not nearly low enough.

The chief adjustment should be horizontal, so that its distance from the handle-bars can be suited to the rider. For me the handle-bars are nearly always just 2in. too far away. People say "Bend the handle-bars." That is certainly a compromise; but not nearly as good as moving the saddle. It does not give the same control. R.E.C.

Ilfracombe.

## *RADIATION OF HEAT.*

Sir,—I have read, with interest, P. Brewster's reply to "E.N.J.'s" article on "Radiation of Heat," and being acquainted with the subject in general, I should like to give him my views.

His first statement, to the effect that very little heat is dissipated by radiation, needs no further comment, but it is his later statements that I should like to say something about.

First of all, glass is *not* transparent to radiant heat, since the latter consists of wave-lengths several times bigger than those encountered in the visible part of the spectrum. Glass is opaque to such wave-lengths which are first met with in the infra-red portion of the spectrum. A practical example of this is a greenhouse, which may be termed a heat-trap, since the glass is transparent to the sun's rays, which are of the visible light, but the radiant heat emitted by the objects inside the greenhouse is unable to pass back again through the glass, since, as stated, it consists of wave-lengths of greater length than those that entered as the sun's rays, and glass will only transmit wave-lengths whose size is about $5.9 \times 10^{-5}$cm., this being the wave-length of light corresponding to what is known as the D line of sodium, and whose colour, as is known by most people, is yellow.

The next paragraph is, however, where his mistake is most evident. Here it is stated that "The real cooling effect is due to convection . . . each particle of air being heated by direct contact with the cylinder as it passes in the stream caused by the motion of the machine." Surely Mr. Brewster means *conduction*—not convection, for as can be read in any text-book on heat, in *conduction*, the matter receiving the heat is in contact with the matter from which it receives it, this being a standard definition of the process of conduction.

The process of convection only occurs when the engine is stationary, and not when in motion, to any appreciable extent. W. E. MARSH.

## *COMPLICATED COASTING.*

Sir,—Over the signature of Louis Field Norton motor cyclists are advised to coast down hill ". . . with the throttle shut and the air wide open," so that "the engine is sucking clean, cool air into the cylinder," etc.

Unfortunately, in about 99 per cent. of carburetters in use on motor cycles, shutting the throttle also has the effect of shutting off the air, even though the air slide may be wide open.

Only on such carburetters as have the air inlet between the mixing chamber and the induction pipe (Binks, for example) is it possible to carry out your correspondent's advice, unless an additional air inlet is fitted. R. J. HARDMAN.

Bishop Auckland.

## *4 H.P. AEROPLANES.*

Sir,—I have read with interest "Ixion's" remarks on the £100 aeroplane, also "Nutansplitpin's" letter, and as I, too, would very much like to see such a machine put on the market, I venture to ask whether any of your readers can tell me what happened to a little machine I saw at Messrs. Farman's aerodrome at Toussous-le-Noble, near Paris, in the early part of 1919. It was a small, single-seater monoplane, fitted with a Fiat twin A.B.C. engine of—I think—36 h.p. The exact wing-span and length I cannot remember, but the main planes consisted of the tail-plane of a Farman "Goliath," the elevator portion being used as ailerons, and running the whole length of the planes. One could lift the fore part of the machine with ease, and one man could pick up the tail and wheel the 'bus anywhere. I was told that she was good for 60 m.p.h., and would do two hours on a tankful of petrol, *i.e.*, two gallons. Also that it was possible to get up to 4,000 feet, and that it was intended to put the machine on the market at 4,000 francs, which at the then rate of exchange worked out at about £148.

Surely, now that production costs are down, such an outfit would sell at about £100, and do all that the private owner would desire.

If my information as to consumption was correct, this little machine's juice bill would compare very favourably with that of an 8 h.p. sidecar outfit, and, with a simple flat twin engine, the maintenance costs should work out at rather less than with a sidecar outfit.

For "Nutansplitpin's" amusement, I may add that as a boy of 16 I built a 22-foot glider, and becoming elated with moderate success, eventually installed a 4½ h.p. F.N. engine with a very home-made prop. The results were catastrophic, needless to add, both to myself and the glider; one glorious ten minutes of frantic taxi-ing, culminating in a bump-off and a very bad landing, being enough to dissolve the whole bag of tricks into its component parts, and to necessitate six stitches being put into my noble brow!!

Cornwall. "NUTHERUMPH."

### ALUMINIUM PISTONS WITHOUT THE DISADVANTAGES.

Sir,—I was astonished to read "Ixion's" remarks in your issue of March 30th re aluminium pistons. But perhaps he has not yet heard of "Specialloid" pistons.

These pistons, as their name signifies, are made of a special aluminium alloy. This is unique, in that it possesses a very high tensile strength and at the same time a degree of expansion under heat very nearly equal to that of cast-iron. Thus this enables Specialloid pistons to combine all the advantages of ordinary aluminium pistons without the attendant disadvantages, *i.e.*, piston slap, risk of stiffness or seizure, etc., which are all a direct result of high expansion.

I could say a great deal more, but will remember that your space is valuable.

In actual practice over a considerable mileage during the last eighteen months I have found that they do all that I was told that they would do. This is especially noticeable as regards speed, economy, and cool running. Piston-slap is non-existent, and after the most brutal treatment as regards over-driving I have never had a stiff engine.

I may add that I have no connection with the makers, Messrs. Specialloid, Ltd., whose address is, I believe, Western Rd., Mitcham, Surrey. D. C. D.

London, N.8.

### COMPLETE SPRINGING.

Sir,—I have read your article on "Spring Frames" with much interest, but was greatly disappointed to find no mention of the "Wooler" spring frame therein.

No spring frame could be more typical of Class I., "That in which the whole frame . . . is sprung," and no spring frame could better comply with your contributor's remark, ". . . a spring frame is best designed as a whole with the front and rear springing on the same lines."

The Wooler front and rear spring parts are interchangeable, and the rear springing adds only about two pounds of unsprung weight, in addition to that of the wheel.

There is none of the "usual disclaimer" business about this letter; but basing my remarks on (I should be afraid to say how many) tens of thousands of miles riding on various types of Woolers, during which time I have never had the least trouble with the springing, it does seem to me a pity that this system of spring suspension was omitted from your otherwise excellent article.

The Wooler springing was first patented by Mr. John Wooler in 1911, has remained exactly true to type ever since, and is standard on all models. JOHN F. HULL.

### STEAM.

Sir,—"W.G.E.E.," writing on the subject of "Steam," asks why it is not given a trial on motor cycles, in view of its many advantages. The answer of an experienced motor cyclist would be that its advantages count for nothing until its disadvantages are overcome, which, so far, they have not been. Is this because the difficulties are insuperable, or because they have not been seriously attacked?

I believe it is for the latter reason, because no ordinary individual will face the trouble and cost of building a machine which must be, admittedly, heavier than a petrol machine of the same power, and more difficult to sell in after years. Nevertheless I am sure a thoroughly practical steam cycle could be built and would be just as reliable as the best modern machine, a better hill-climber, more suited to passenger work, pleasanter to drive, and better capable of maintaining its tune (not to mention fuel at 1s. 6d. a gallon).

Correspondence on this subject crops up regularly, but we can get no further by theory I would suggest that if some motor cyclist, who is also a "model engineer," were to build an experimental machine he would derive great pleasure and satisfaction from it, and would be doing a great service to the pastime by publishing his experiences.

Anyone who has seen Mr. Hindle's design in the *Model Engineer* (April 11th and 18th, 1918) must agree that he has overcome the more obvious difficulties very neatly, and one could not go wrong by following it.

J. R. HARDING.

Sir,—"W.G.E.E.'s" idea struck me as distinctly humorous. I can imagine the average motor cyclist seated astride a tank of water at a temperature of about 300° C; between his legs is a fire-box burning coke. (Coke carried in special coke carrier at rear.)

Every two or three miles A.M.C. must perforce dismount to stoke up.

When he stops his engine the safety valve, which would be situated *à la* top tube, would fly open, thereby considerably damping A.M.C., and also causing the recital of numerous words and phrases which are not fitted as standard on most modern makes of dictionary.

I am only seventeen, and am therefore very ignorant of these matters, but I know that until some genius invents a rig-out of nether garments of 3in. steel, asbestos lined, this child will stick to really inefficient i.c. engines. M.E.M.

Leicester.

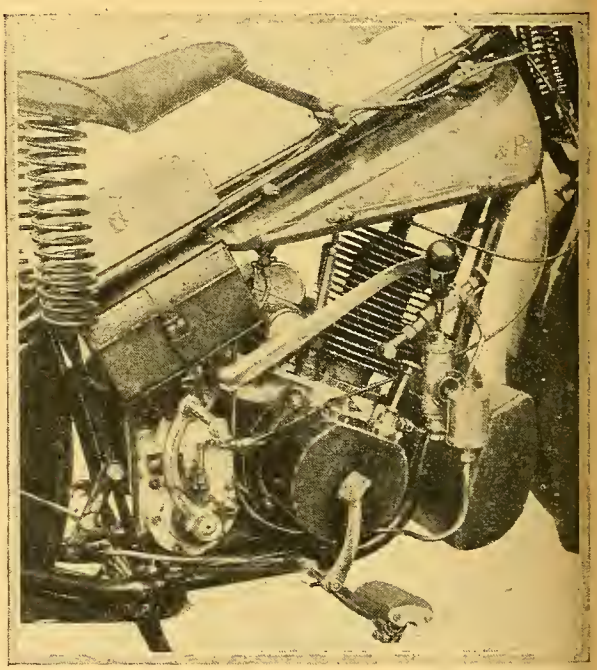
### SHAFT DRIVE'S UNPOPULARITY.

Sir,—Replying to Mr. Morris's query, the reason for the shaft drive being left severely alone by manufacturers is simply because it is not, and cannot be made, as efficient as the chain drive. The difference is anything from 15% to 20%, according to design, and may be even greater after prolonged wear. As a mechanical job, however, where transmission loss is not of importance, it is decidedly preferable.

The success of the modern motor cycle is undoubtedly due to the fact that for its power it is capable of doing much more work than any other machine on the road, and this is chiefly because of its higher transmission efficiency. No better proof of this can be obtained than by merely going back to the shaft-driven bicycle of a few years ago (or "chainless" as it was called). These machines died a natural death, in spite of a lighter and neater appearance, so soon as they were tried out on the racing track by experts, and in competition with the chain-driven machine.

The margin of power available from the average motor cycle engine does not permit of inefficient transmission systems simply on the score of cleanliness or appearance.

W. A. WEAVER,
COVENTRY VICTOR MOTOR CO., LTD.



Without departing radically from the orthodox, the experimental Poppe & Packman 250 c.c. two-stroke possesses several unconventional features, as the illustration shows, in the lay out of the power unit, frame construction and saddle suspension. A full description of the machine appeared last week.

### CORRECTION OF COMPASS ERROR.

Sir,—Your correspondent, Mr. K. N. Howard, asks for a means of correcting the error of a compass fitted to his motor cycle. The best method of doing this is to procure one or two small bar magnets and place them under the compass, being free to revolve independently round their centres (being an imaginary extension of the axis on which the needle works), and to be moved nearer and further from the needle. (One magnet would do, but would not be as accurate as two.)

The machine, in normal running condition, should then be placed in a level position and away from metal buildings or electric wires. The corrector magnet should then be set so that the compass needle shows a minimum average error all round; this can only be found by experiment. It is impossible to obtain absolute accuracy by this method, or for that matter by any other, and if Mr. Howard desires greater accuracy he will have to prepare a card setting down the error at a number of equal points round the compass. Obviously, the more points taken the better the results he will obtain.

It is almost impossible to say what the best position for the compass would be, as it depends on the machine itself, but above all, it should be placed as far from electric wires, magnetic speedometer, and the framework of the machine as possible. The sidecar would probably be found unsuitable owing to its bouncing propensities when empty.

Derby. STREAMLINE.

Sir,—I should advise Mr. Howard to procure one of the excellent treatises on this subject by Captain Craig Osborne, of the Admiralty Compass Department; these can be obtained by any bookseller. But I can assure Mr. Howard that it will be quite impossible for him to correct perfectly his compass under the conditions in which he wishes to use it. He will be able to correct for the magnetism in the wrought iron and steel parts of his machine by means of small correcting magnets, placed at right angles to each other, in a special receptacle under or above the compass, but he will not be able to correct for the magnetism in the soft iron parts of his machine. The only known way at present of making this latter correction is by means of soft iron balls placed either side of the compass, and owing to their size and weight this would be out of the question on a motor cycle.

A. G. STORY,
Late Compass Officer, R.A.F.

Sir,—With regard to Mr. Howard's compass showing an error of about 30° on northerly and southerly courses, it is quite clear that it is suffering from the effects of an athwartship magnetic attraction. I gather from his letter that the error is zero in east or west courses up to north or south. Now there is a position on his machine where the magnetic forces on one side of this position would be equally balanced by the forces on the other side; consequently a compass placed in the determined position would not be affected by the side pulls. On the other hand, if he placed the compass in this position it is quite possible that it would now be affected by fore-and-aft attraction, resulting in errors appearing when heading east or west, but not north or south.

I would suggest that he leave it in its present position, and get a small magnet and correct the error. NAVIGATOR.

Lee, Kent.

### SIXPENNY PILLION RIDES.

Sir,—Relative to my advertisement offering pillion rides at 6d. per mile, and your short comment, it may interest your readers to know that same was the outcome of a wager at the club with a view to disproving, if possible, an assertion of a fellow member. VIC.

Hendon.

### AMATEUR ROAD RACE DETAILS.

Sir,—The idea of an Amateur Road Race seems to be a most excellent one. I, amongst many, are most certainly in favour of such an event.

It will no doubt be well patronised by motor cyclists and others. TERRIER.

London, S.W.19.

Sir,—There is a clause in the condition of the proposed race to which I as an amateur very strongly object, viz.: It is stated that any riders who have entered this year's open T.T. are not eligible to enter the amateur event this year should such a race take place, although I notice it is suggested that amateur riders who do not gain a gold medal in this year's open event will be eligible to enter the race next year should one take place.

What is the reason for this clause? Are we amateur riders to understand that all the entrants in this year's open events are considered to have had assistance rendered to them in some form or other by the manufacturers? It looks very much like it when they are debarred from entering the amateur event.

I am an amateur absolutely, and have no connection in any shape or form with the trade, not even as a shareholder in any of the concerns. I have entered this year's open event, but I did so as it is, or was, the only means of taking part in any Tourist Trophy event. I have never won anything at all in any open competition of this kind, and I most certainly consider it most unjust and unfair that I should be excluded from taking part in this proposed amateur event.

If I had known that the amateur event was to take place I should not have gone to the expense of entering the open T.T. C. WATERHOUSE, Jnr.

### TWO-STROKE EFFICIENCY.

Sir,—In reply to "R.T.F.," it is not my intention to continue a technical discussion on thermal conductivity and emissivity in your correspondence columns. I would only say that I cannot agree with him. May I remind him—

(1.) That the rate of flow through metal is large compared with the rate of flow from metal to air, and the surface getting rid of the heat is through the whole of the outside cylinder surface, not the head only.

(2.) The loss of heat from the working stuff to the walls takes an appreciable time, and continues throughout the stroke, not merely at the instant of ignition.

In further reply to your correspondent, "R.R.," who raises the question of the Alecto long-distance records: whilst not wishing to disparage the excellent performance of the Alecto in these records, I would point out that one swallow does not make a summer, and he will find that my statement generally holds good. Innumerable instances might be quoted which would seem to support it, but these do not really do so, *i.e.*:—

The 500 c.c. class was won by a 350 c.c. four-stroke in the T.T. last year.

The 350 c.c. Sunbeam, at the first 1922 Brooklands meet equalled the time put up in the 500 c.c. class.

Berger, on a 220 c.c. Velocette, in France, got the premier award in the Tour de France, over a course of 2,300 miles.

M. C. JENNISON.

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### Where to go on Saturday.

London and Home Counties enthusiasts should note that the big open hill climb, to be held next Saturday on Kop Hill, Princes Risborough, starts at 12 noon.

### Silence—in Two Continents.

Cut-outs have been prohibited in Great Britain for the past nine years. In the United States just now an appeal is being made to manufacturers to abandon the fitting of cut-outs altogether.

### Postmen Motor Cyclists.

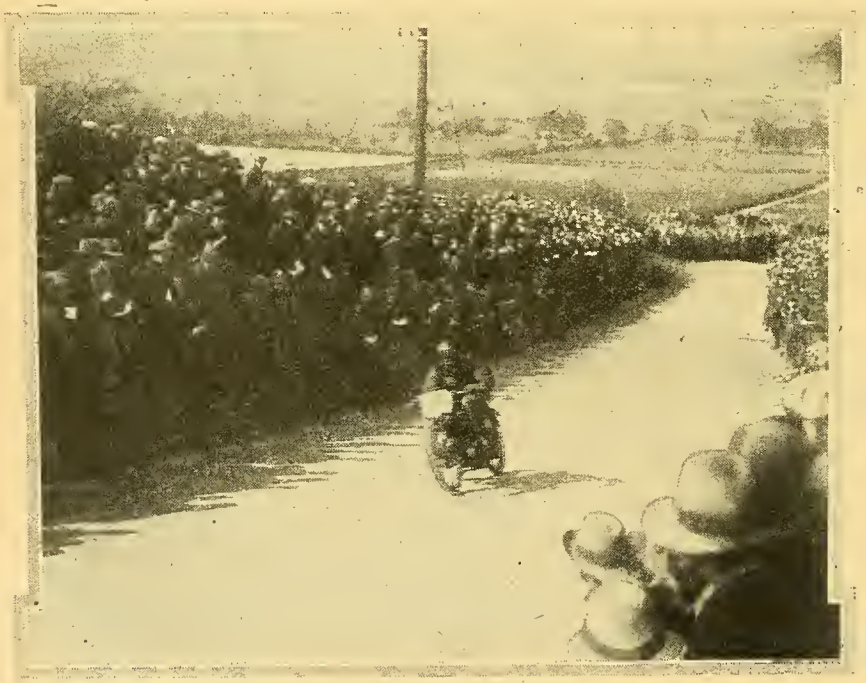
In the American town of Riverside motor car mail vans are being abandoned and motor cycles have taken their places.

### South African Imports.

For the twelve months ending December 31st, 1921, 1,424 motor cycles were imported into South Africa, to the value of £131,685, comparing rather unfavourably with the figures for 1920—3,314 motor cycles, value £274,593.

### Are they the Best?

According to Sir Henry Maybury, our finest roads are the granite-paved ones in Glasgow. The setts are blocks of granite like kerb-stones, 3ft. 6in. long, set in bitumen, but the price is prohibitive. For heavy transport vehicles they are, no doubt, very satisfactory, but what about solo riding thereon?



No keener sportsmen are to be found than Yorkshiremen, and no matter what the event crowds are sure to gather, as shown by the photograph taken at Staxton hill climb. The rider is E. Searle on a Sheffield-Henderson.

### Pillion Riding.

In view of the favourable comment on pillion riding in the Inter-Departmental Committee's report, the daily newspapers have given a distinct fillip to this method of carrying a passenger.

### Not so Bad as we Think.

There are bad roads in England, and plenty of them, but there are also some of the best in the world. According to the Director of Roads of the Ministry of Transport, French and other foreign road-makers frequently come over to study our methods.

### Driving Mirrors.

On a recommendation of the General Purposes Committee of the Derbyshire County Council, the clerk was instructed to draw up a bye-law compelling motor vehicles to carry driving mirrors. In the opinion of the Ministry of Transport, such a bye-law, before coming into force, would require confirmation by the Home Office, and such a contingency is, we understand, extremely unlikely.

### Regulations for the Grand Prix.

Official rules for the French Motor Cycle Grand Prix, to be run at Strasbourg, on July 12th, have just been published, and merely confirm the outline already given in these columns. This race, the most important event of its kind in France, is open to 250, 350, and 500 c.c. machines complying with the international regulations regarding weight and tyre sizes. The Strasbourg circuit is 8.31 miles round, and will have to be covered 20, 25, and 30 times respectively by the 250 c.c., 350 c.c., and 500 c.c. classes. The entry fee is 400 francs per machine, whatever the class. Entries close on May 15th, or at double fees on June 15th.

### Lake District Open Trial.

Organised by the Cumberland County M.C.C., the Northern Centre A.C.U. will hold an open reliability trial on Saturday, May 13th, starting from the Crown and Mitre Hotel, Carlisle, at 9 a.m. Valuable prizes and trophies will be awarded to the winners, including the "Alan Trophy," value 65 guineas, for the best individual performance; the "Cumberland County Trophy" for the best performance in the solo class, the "Barron Trophy," for the best performance in the passenger class (excluding light cars), and the "New Imperial Trophy," for the best performance on a machine up to 250 c.c. Further particulars and entry forms may be obtained from the hon. trials secretary, Mr. R. L. Williamson, 19, Cecil Street, Carlisle.

EVERY THINKING MOTORCYCLIST JOINS THE AUTO-CYCLE UNION.

# THE AUTO-CYCLE UNION

## What is the best method of ensuring that every Motor Cyclist in the Kingdom shall become a member of the A.C.U. ?

To do so means, firstly, making known the unquestionable advantages of membership—already known and appreciated by tens of thousands. If we are to create a really powerful national organisation these benefits must be made known individually to the whole of the half-million motor cyclists in the Kingdom.

If such a powerful organisation be not created, then we must continue to suffer at the hands of uninformed officials in matters of law and its administration, and also continue to be at the mercy of monopolists in matters which touch our pockets, and so restrict the free use of our machines.

How, then, can we bring home to every individual motor cyclist the necessity of joining, both for his own personal profit and in order to create *that great national body which all must recognise as so necessary to-day ?*

It is a simple matter to reply:

**"Advertise!"**

This is a valuable aid—

But it isn't *original*, is it?

# WE WANT ORIGINAL IDEAS.

## Therefore the following prizes are offered :—

**1st Prize - £100 in cash**

**2nd Prize - £50 " "**

**3rd Prize - £10 " "**

**and twenty Consolation Prizes of £1 each.**

### WHAT YOU HAVE TO DO TO WIN A PRIZE.

**Submit to the Secretary of the Auto-Cycle Union, 83, Pall Mall, London, S.W.1, suggestions as to the best method of inducing 250,000 motor cyclists to enrol in the A.C.U. by the 30th September, 1922; stating what additional benefits, if any, the Union might usefully offer.**

**These are the simple rules governing the Competition :—**

1. Your scheme must be expressed in not more than 500 words, but should set out in detail exactly how you would operate it.
2. It must be forwarded to the Secretary A.C.U., 83, Pall Mall, London, S.W. 1, not later than the 15th May, 1922.
3. No correspondence will be entered into with entrants.
4. The decision of the Judges, who will be members of the Committee of the A.C.U., assisted by Commander F. P. Armstrong, R.N.V.R., Acting Secretary, Royal Automobile Club, and the Editor of "Motor Cycling," as to the award of prizes will be final and binding on all entrants.
5. The Committee reserve the right to make use of or adopt any scheme or part thereof whether a prize has been awarded to its author or not—but in the event of such use will award a special honorarium to any competitor who is not an actual prize winner.
6. The result of the Competition will be published in "The Motor Cycle" and "Motor Cycling" on or before 15th July, 1922.
7. In order to rule out other than serious competitors, no suggestion will be considered unless accompanied by the application form at the foot of this page, together with a remittance of 1/- in stamps or postal order.

(Members of the Staff of the A.C.U. and R.A.C. are not eligible as Competitors.)

I desire to enter the A.C.U. Membership Competition and enclose 1/= entrance fee herewith.

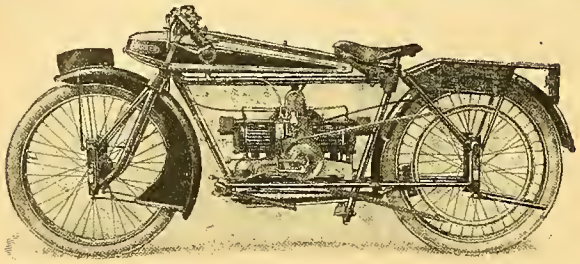
**Economical to Run,**
**Easy to Handle, Delightful to Drive.**
**Ranging in Price from - - - £65.**



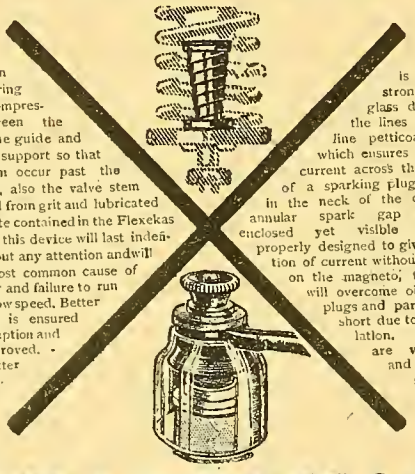
THE DEDERICH-WOOLER ENGINEERING Co
ALPERTON, LONDON.

*Write for particulars.*

**WOOLER Motor Cycles always are Value for Money and fulfil the most exacting requirements.**

# FLEXEKAS

Flexekas is simply an airtight spring fitted in compression between the bottom of the guide and the spring support so that no leak can occur past the valve guide, also the valve stem is protected from grit and lubricated with graphite contained in the Flexekas. Once fitted this device will last indefinitely without any attention and will cure the most common cause of bad starting and failure to run evenly at slow speed. Better carburation is ensured and consumption and power improved. Valve clatter is also eliminated.



Sparxekas is a dome of strong tempered glass designed on the lines of an H.T. line petticoat insulator which ensures no leakage current across the insulator, of a sparking plug. Embodied in the neck of the dome is an annular spark gap completely enclosed yet visible externally; properly designed to give amplification of current without any strain on the magneto, this device will overcome oiling up of plugs and partial internal short due to dirty insulation. Sparxekas are very neat and give a striking effect.

# SPARXEKAS

**FLEXEKAS fit any engine and are supplied with special heatproof graphite paste at 2/6 per valve. Extra cartons of paste to be used when overhauling are 1/6 each.**

**SPARXEKAS fit any plug and are supplied complete and ready for fitting under existing terminal nut at 2/6 per plug.**

*Obtainable from Halford Depots, James Grose Ltd, principle garages or direct from*

**CLIFFORD PRESSLAND, A.M.I.E.E.**
**Engineer, HAMPTON-ON-THAMES**

# HOBART—

## VALUE and EXPERIENCE—

these points are essential to you. In the lightweight motor cycle class, two-stroke or four-stroke, there's a HOBART model to meet your requirements.

VALUE—in price to the utmost limit, is represented in every HOBART model.

EXPERIENCE—in manufacture since 1884 is put into every HOBART Motor Cycle.

## THE MOTOR CYCLE FOR YOU—

Two-stroke—Villiers or Morris engine.
Four-stroke—J.A.P. or Blackburne engine.
Gear Box—Sturmey-Archer, 2 or 3 speed.
Transmission—Chain-cum-belt or all-chain.

**PRICE from £42 0 0 upwards.**

*Full specification post free on request.*

**HOBART CYCLE CO., LTD.,**
**COVENTRY.**

### Cheaper Benzole.

Most of the roadside garages during the week-end announced benzole stocks at 2s. 11d. per gallon.

### The Great North Road.

Gradually the condition of the Great North Road is improving. From London to Doncaster is generally good, the only really bad section being at Alconbury Hill. North of Doncaster, Aberford, Ferrybridge and Wetherby districts retain their old unenviable reputations, but signs of improvement are apparent here and there.

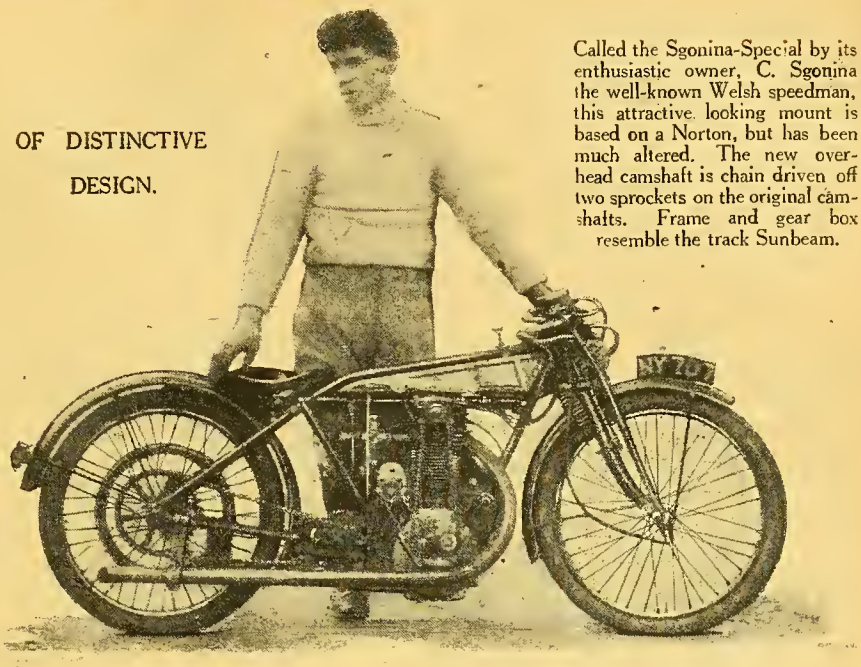
### South African T.T. Race.

It is wonderful the influence the T.T. Races have had throughout the world. The Natal M.C.C. has been accustomed to run a South African T.T., but at the request of the Motor Cycle Union of South Africa it has agreed to forgo the title of "South African," owing to the fact that the Union contemplates organising an event for the whole of South Africa, to be known as the South African Tourist Trophy Race.

### Sue the Manufacturers!

Sheffield magistrates reluctantly fined eight offenders £2 each for using motor cycles which were too noisy. In several of the cases it was evident that the noisy machines were used as sold by the manufacturers, and the presiding magistrate said that he was surprised that reputable firms sold machines in such a condition. The defendants were advised by the magistrates' clerk to sue the firms selling the machines for damages. We have already hinted in *The Motor Cycle* that the silencing arrangements on certain sporting models are, if used (to employ a common expression) "simply asking for trouble."

OF DISTINCTIVE DESIGN.



Called the Sgonina-Special by its enthusiastic owner, C. Sgonina the well-known Welsh speedman, this attractive looking mount is based on a Norton, but has been much altered. The new overhead camshaft is chain driven off two sprockets on the original camshafts. Frame and gear box resemble the track Sunbeam.

### Value of International Trials.

All the British competitors who took part in the International Six Days' Trial last year agreed that, on account of the unfamiliar nature of the Alpine roads traversed, the event was one of the most instructive in which they had ever ridden. The principal British makes represented were the A.J.S., Brough Superior, Douglas, Sunbeam, Scott, Raleigh, Triumph, and Norton; the two latter were entered by Swiss representatives.

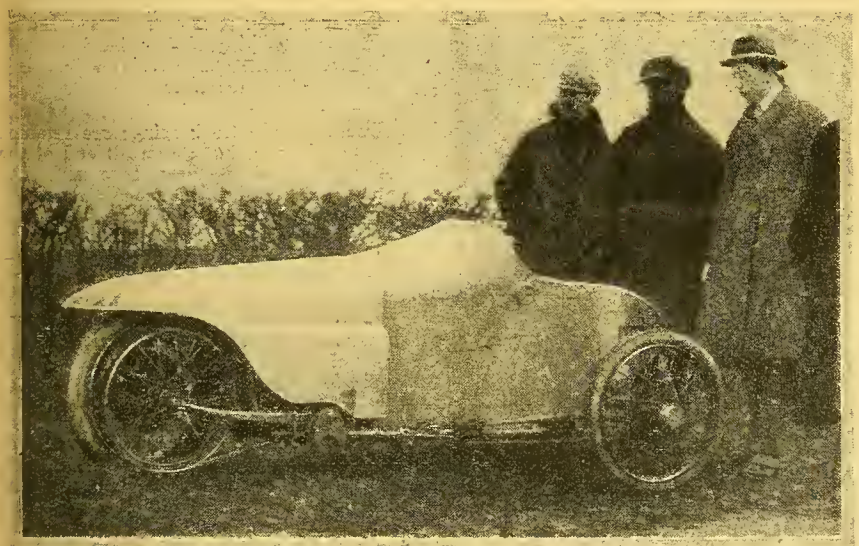
### Amateur Road Race Abandoned.

So as to avoid embarrassing the A.C.U., the Manx M.C.C. definitely decided last week-end to abandon the Amateur Road Race for this year. Particulars of the A.C.U.'s refusal of an open permit are given on page 549.

### Racing Track for Blackpool.

The Blackpool and Fylde Motor Club is receiving the enthusiastic support of motorists throughout the North of England for the proposal that a new motor racing track should be included in Blackpool's new park scheme. The A.C.U. and the Lancashire A.C. are to consider the question at their next meeting. Meanwhile a large number of important motoring clubs have written to the Town Clerk in favour of the proposal.

After all, why should not Blackpool have a motor race track? There are few seaside resorts in the country with a better claim and few places more popular amongst northern motor cyclists



FRONT WHEEL DRIVING AND STEERING. A Yorkshire product, the 8 h.p. Jap-engined Bramham monocar. Similar in layout and transmission to the Stanhope cycle cars, it was entered in last Saturday's Sutton Bank hill climb, which was postponed owing to rain.

THE NEXT STAGE!

*MOTOR CYCLISTS interested in small or large cars should read*

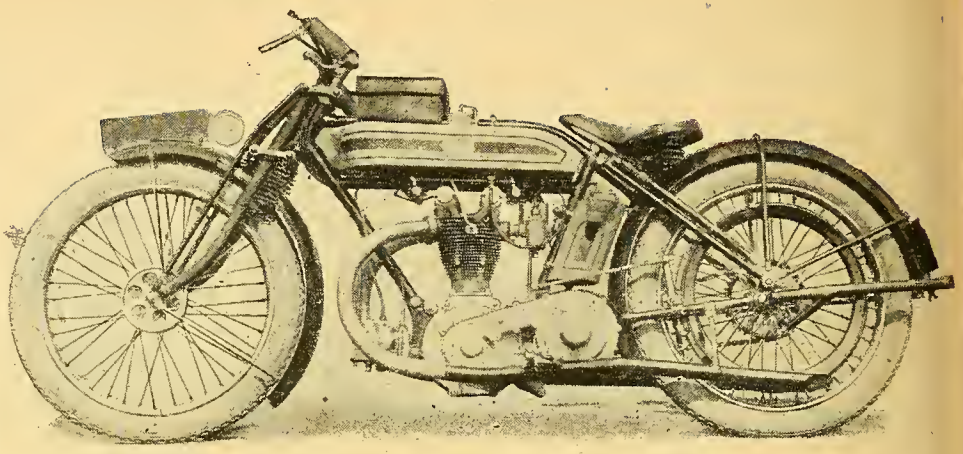
The Autocar

Every Friday 4d.

*the forerunner of all motoring journals. Founded in 1895, it remains the largest and most successful automobile paper, and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.*

# TRIUMPHS FOR THE T.T.

## Four-valve Engine; Three-speed Gear Box; No Kick-starter; Detail Modifications. 26×3in. Tyres Retained.



At a glance the Triumph for the T.T. resembles the standard four-valve model, but on closer examination there are one or two obvious modifications, none of which, however, is in any way freakish.

WHAT first impresses one about the Triumph for this year's T.T. is that it would make a most delightful standard solo mount of the super-sports type. For although it embodies advanced features of design it bears not the slightest suspicion of being a racing freak.

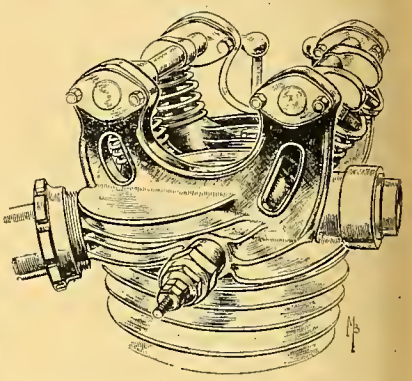
It may be described as a blend of last year's four-valve I.O.M. design, and this year's marketed model with several important modifications.

The cylinder dimensions now are 85×88 mm., the reduction in stroke permitting ample ground clearance, but at the same time allowing full scope for the design of an efficient cylinder head and overhead gear with two inlet and two exhaust valves without increasing the overall height, and, consequently, raising the centre of gravity of the machine. We were assured that there was no other reason for this reversion after a year in the long stroke class to a more "square" cylinder.

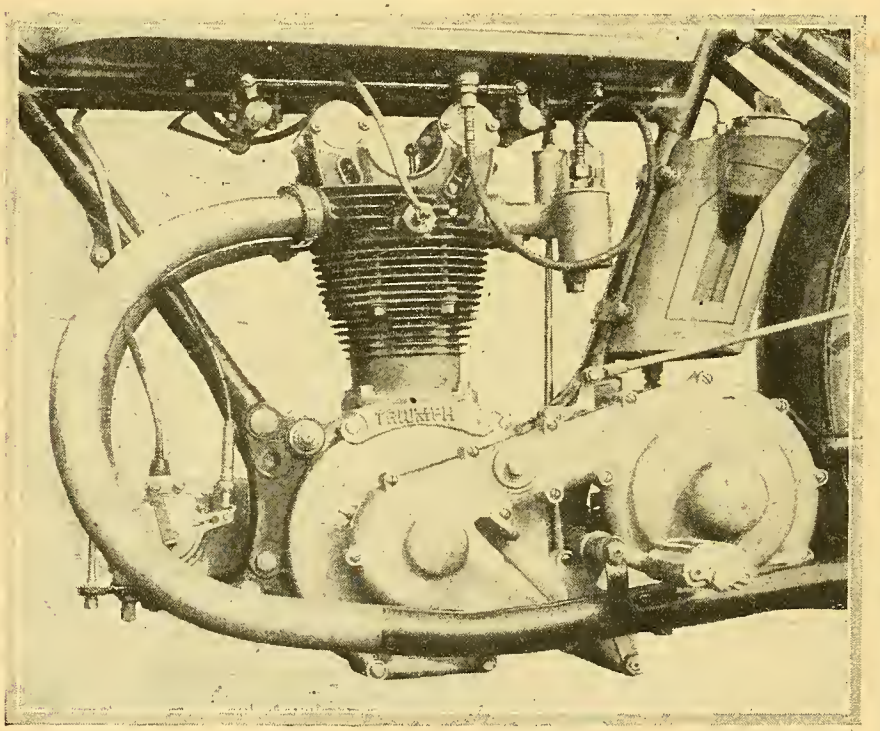
At a cursory glance, the cast iron cylinder, cylinder head, and the overhead valve gear, all resemble the marketed sports model, but actually there have been some modifications. The valve area is approximately 25% greater, the two exhaust ports are set out at an angle instead of being parallel on their centre lines, and the sparking plug has been transferred to the side. This last change was made purely on the score of increased accessibility and an alternative position is retained in the centre of the head.

As before, the inlet valves are "masked," but generally the whole valve gear is on more generous lines than hitherto.

The timing gear, too, has been altered on the lines of last year's I.O.M. Triumph, the cams are smaller but wider, and the decompressor has been dispensed with.



Overhead valve gear and cylinder head. The sparking plug may be fitted at the side as shown or in the old position in the centre.



The 85 × 88 mm. edition of the four-valve engine to represent Triumphs in the I.O.M.

Double-row roller bearings are retained for the big end, but the small end of the connecting rod is now hardened, and carries the floating gudgeon pin without the customary phosphor-bronze bush.

The lubrication system is not unchanged, but a detailed description of this must form the subject of a future article.

About 18 h.p. at 5,000 r.p.m. is expected from the engine. At present the compression ratio is about 5¼ to 1, but the removal of the standard compression plate would increase this considerably; whether this will be done has not yet been decided.

Transmission has also undergone detail alterations. A three-speed close ratio gear box on the usual Triumph lines has been designed so compactly that the actual casing is the same size as last year's T.T. two-speed box. The clutch area has been increased but both clutch and shock absorber are of the same design as previously. Clutch operation, however, is effected by a rod passing through the hollow main shaft. No kick-starter is fitted. The oil bath primary chain case

**Triumphs for the T.T.—**
is cut away in the centre, permitting the footrest bar to be fixed in the correct position for greatest controllabilty.

Several sets of alternative gear ratios are under consideration, the final choice depending on whether 80 m.p.h. is regarded as possible on the Island course. As the machine stands, a top ratio of 4.45 to 1 gives 5.48 and 8.23 as second and first; with a 4.75 top the others would be 5.84 and 8.78; while a third alternative, necessitating, of course, a change in the box, would give 4.75, 5.84, and 7.12.

Excess care has not been devoted to the engine and transmission at the expense of the bicycle parts, and the few details where improvement seemed possible have all received attention. The excellent rear brake remains as before, but the control rod has been modified so that the brake pedal lies directly under the rider's foot when normally placed on the rest. In front a neat external band brake has been fitted.

Since the main tank carries petrol only, and is of a wider build, the capacity has been increased to about 2¼ gallons. No carrier is fitted. 26in. × 3in. Dunlop Magnum tyres and Druid forks, of course, find a place in the specification as does the new square type M-L magneto. The final choice of a carburetter will probably fall on the racing Amac, but, naturally, not without experiment.

We should imagine that the Triumph team will be among the first favourites at the start on June 1st.

# A TRIAL FOR WORKS STAFFS.

## The Men who Assist in Making Motor Cycles hold a Trial of their own.

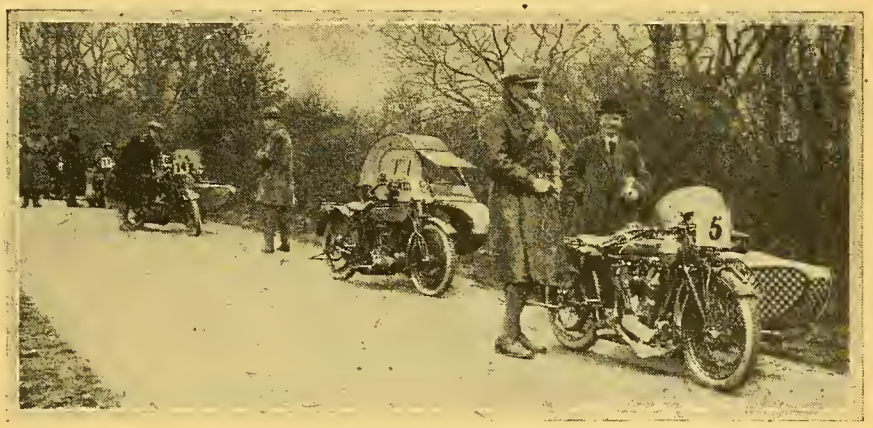
AS its name implies, the Coventry and District Works' Motor Association is a body whose membership is drawn from local works' staffs. That this energetic institution is growing rapidly is shown by the fact that no fewer than sixty-one entries were received for the half-day reliability trial held on Saturday last.

Unfortunately, various circumstances prohibited the participation of many entrants, and only thirty-five actually faced the starter. Of these thirty-two finished the course, which was approximately fifty miles in length, and was intentionally of an easy nature. This trial was intended as a form of training for stiffer tests in the near future, and it must be remembered that though the members are recruited from Coventry motor works, well-known competition riders are comparatively few and far between. In fact, the majority of competitors on Saturday last were genuine amateurs, riding and owning their own machines, many of which were faithful friends of some years' standing. This accounts for the fact that there were three failures on the very modest little hill turning off right-handed some three-parts of the way up Warmington hill. On this, the most severe up gradient on the course, there were several excellent performances, notably, W. Montgomery (8 Brough Superior sc.), J. Herbert (5 Lea-Francis sc.), E. Marshall (4½ Humber sc.), T. Gibbins (8 Rex-Acme sc.), S. Walker (6 Excelsior sc.), J. Bratby (4½ Humber), W. Dono (4 Triumph), and J. Richards (4 Triumph sc.).

For the rest, the only difficulties lay in the negotiation of some rather greasy but very smooth three-track field roads between Gaydon and Warmington. On one gradient in this section there was a certain amount of wheel spin, but the most serious trouble was the number of gates to be opened, which materially delayed competitors in the non-stop section.

Both start and finish took place just off the Coventry-Kenilworth Road, and in spite of a wet morning not a drop of rain fell throughout the trial. There might have been more direction arrows employed, but there was no real excuse for the few who left the course.

Results will not be available until next week.



A study in sidecars at the Coventry and District Works' Motor Association's Trial on Saturday. In the foreground is W. Montgomery's brilliant chessboard sidecar attached to a Brough Superior; immediately behind is J. Biddle's Rudge and compact little coupé.

Although associated all the week with the manufacture of motor cycles, the majority of the members of the Association are as keen amateurs as are to be found in any club. The illustration depicts the start of their trial last Saturday.

# A TRIAL FOR PRIVATE OWNERS.

## Surbiton Motor Club's Third Annual Team Contest.

Five of the winning team in the Surbiton Club's inter-team trial. From left to right they are A. Shillito (8 Matchless sidecar) R. C. Staunton (4 Triumph), R. A. Green (Norton), E. R. Showell (6 Martinsyde sidecar), R. Charlesworth (3½ Zenith-Bradshaw); the other member of the team was W. Henry Wells (7 A.J.S. sidecar). They represented the organising club.

DESPITE the very unpleasant weather conditions, there was no lack of enthusiasm on the part of the private owners who competed in the team trial organised by the Surbiton Club, which took place last Saturday. Team captains were supervising last minute preparations, checking watches, and issuing final instructions so that nothing should be left to chance, and so interfere with the teams' prospects of winning the Maudes Shield. The weather conditions being so bad, the organising club called a conference of club captains, who decided that instead of doing three circuits of the course, two would suffice.

### Not a Freakish Course.

The event being open only to amateur riders, the executive wisely decided to exclude anything of a freakish nature on the course, which lay through Guildford, Albury, Farley Green, Smithwood Common, Horseblock Hollow, Shere, Gonishall, White Downs, Crocknorth, Horsley Towers, Ockham, and back to Ripley. Bright Street, Guildford, Horseblock Hollow, and White Downs were the three test hills. Most of the competitors had plenty in hand on Bright Street, some of them making particularly fast climbs. The "star performances" were the two Brough Superiors, driven by H. D. Dobson and J. Clutterbuck; also the entire Oxford team.

From Bright Street the course was followed with some difficulty; it would have been considerably better if the club had augmented the blue dye with arrows, the continuous rain having washed most of it away.

Horseblock Hollow was the next test hill; having a gradient of about 1 in 5, and rather loose, it is quite a "stiffish" climb when dry, so it was not surprising that a few failures resulted. R. W. Greaves (Enfield sc.), B. E. Belfield (James sc.), and F. V. Edwards (4 Harley sc.) were among the unfortunates.

An excellent ascent was made by D. F. C. Fitzgerald (4 Norton); a sidecar failure directly in his fairway necessitated a swerve into the greasy gutter; this gave him a bad wobble, but, making a good recovery, he proceeded to the top at speed.

A circuitous run over muddy lanes brought the riders to Shere, and so on to White Downs. This accounted for quite a few stops, some due to bad luck, but none to absolute lack of power. Easy going through Ockham back to Ripley completed the circuit of 33.3 miles. Only four of the teams were intact for the next circuit, Woolwich leading on the first round, followed by Surbiton, Brighton, and Oxford. They continued in this position until Crocknorth, where F. Ellis, the Woolwich captain, riding a Triumph, had a fall and broke his handlebars, and so ended the Woolwich team chances.

The three remaining teams, finishing complete, made it a question of time as to which was the winner. Half an hour's work on the part of the officials found the Surbiton Club first.

D. H. Williams (2¾ A.J.S.) making light of White Downs Hill.

# THE AMATEUR ROAD RACE.

## A.C.U. Refuses Permit for Open Amateur Event between Junior and Senior Trophy Races.

AND so the open amateur race is not to be after all. The news will be received with regret by the hundred thousand odd keen motor cyclists in this country and riders the world over.

After giving the proposal its blessing, the A.C.U. Competitions Committee reversed its attitude last Friday, when formal application was made by the delegates of the Manx Motor Cycle Club, and, by a majority of one only, turned down a race it originally encouraged.

### Objections Not Convincing.

It will be recalled that at the previous meeting between the Anto-Cycle Union and the representatives of the Manx Club, the A.C.U. stated that the proposal was "sympathetically received," and "permission was granted to apply for a permit," but since then other influences have been at work.

The membership of the A.C.U. is very largely composed of private motor cyclists, and they will inevitably require an explanation for the refusal to grant a permit for an event so exclusively of interest to that particular class of rider.

That an amateur race would be popular has been amply proved in our pages. No one will deny that there are obstacles in the way, but some of the objections trumped up by the several interested parties were considered petty in the extreme.

### Of Political Significance.

Two Manx representatives came over specially for the A.C.U. meeting—G. J. A. Brown and H. Cowin—and returned to the island unconvinced as to the merit of the objections put forward, their report being presented to the Manx Motor Cycle Club last week end.

True the time in which to arrange the race has been short—and this may be regarded as one of the chief objections on the part of those who wished to see the race a success—but, from the moment the proposed event was announced in our pages, it appears to have become a political matter of greater significance than is generally realised by the enthusiast.

The position of the A.C.U. is rather a difficult one. It is first the governing body of the sport and pastime, representing the motor cycling public and doing its best to foster development along right lines. In order to do this, events such as the Tourist Trophy races are promoted. The committee are, therefore, race promoters. Now a race is proposed which, although not probable, is at least possible ultimately to rival the A.C.U. event, and antipathy is perhaps natural. This revives a question often asked by private owners, i.e., whether the governing body is in a position fairly to adjudicate in such matters, where an unbiased view cannot be expected.

### Trade Objections.

It was not the A.C.U. objections, however, which were entirely responsible for the rejection of the amateur race. It is no secret that there was strong opposition on the part of the trade, who, through Major H. R. Watling, of the Manufacturers' Union, approached the A.C.U. with a list of objections.

From what we know of the objections of both the A.C.U. and the trade, we can say that some at least were petty and unconvincing; but there was one objection shared by both the A.C.U. and the trade, and, we will admit, also by ourselves. *An amateur race sandwiched between the great blue riband Junior and Senior events would undoubtedly tend to minimise the importance of the latter.*

Some of the other objections are regarded in the Isle of Man as merely excuses. For instance, the view was advanced that such a race would have no scientific value. (Comment is unnecessary.)

Another objection was that an extra 25 or 50 men on the course would be detrimental to the roads, yet the A.C.U. was open to receive entries up to 200 for the T.T. races, and less than 150 have been received.

There is no doubt that the idea of an amateur race was not congenial to the A.C.U. management—as distinct from the competitions committee—a representative and sporting committee, it so happens. Thus the committee had the difficult task of deciding whether they were to be swayed by outside considerations or endorse their previous feeling and grant a permit, and so satisfy the insistent call of keen amateurs for a race all their own. As we have intimated, there was a majority of one—7 for and 6 against. A narrow rejection.

### Suggestion—Too Late.

We are informed that the feeling of the committee appeared to be that had a formal application for a permit been made in respect of the Friday after the senior race it would have been granted. It transpires, however, that this suggestion did not eventuate until after one or two members of the committee had left, and on the Isle of Man delegates making an application for a permit for the day mentioned, it was found that another meeting would have to be called. There is now no time for this to be done, so the I.O.M. delegates returned to the island with two alternatives to discuss:

1. Postponement until next year.
2. To run the race as a closed event.

It is some time now since we first termed the A.C.U. the Motor Cyclists' Parliament, but it was not until this affair that the true likeness to parliamentary methods became apparent.

Keen amateurs who want the race are bound to consider that the A.C.U. has been influenced by the trade in a matter over which the private motor cyclist considers the trade has no jurisdiction. It is argued that an amateur race on the lines suggested by the Manx Club is surely just the very event where trade considerations should be entirely absent.

Personally we should have liked to have seen the race materialise, but not at the expense of the T.T. races. Possibly the Manx Club will organise an event later in the year. Certainly an event at a later date would attain greater prominence than if held at a time when so many important competitions are engaging the attention of all interested in the motor cycle movement.

### "The Motor Cycle" Cup.

*The Motor Cycle's* offer to present a cup to the winner was contingent upon the official A.C.U. permit for the event, in order to preserve harmony in the motor cycle world, but it is renewed for an amateur race under A.C.U. ægis, if the Manx Club can arrange another date satisfactory to all parties.

---

## THIS YEAR'S LONDON-EDINBURGH RUN.

PARTICULARS of the fifteenth London-Edinburgh run organised by the Motor Cycling Club are now issued. As previously announced, the start will be from a private road adjacent to the London Country Club, Hendon, on the evening of Friday, June 23rd, and Kirkstone Pass will once again be included. The first breakfast will be at Grantham, the second breakfast at Ilkley, lunch will be served in Carlisle, while there will be a stop at Moffat for tea.

Entries cost £2, including a deposit on the number plates, which must be returned to the club after the trial. The final date for the closing of entries is Saturday, May 13th.

Gold medals will be awarded to competitors who comply with the regulations, who are not more than 15 minutes early at any point on the journey, or more than 10 minutes late at any point, and who complete the section from Ambleside over Kirkstone Pass up to Patterdale as a non-stop run.

Silver medals will be awarded to competitors who are not more than 15 minutes early or 30 minutes late at any point on the journey. Bronze medals will be awarded to competitors who are not more than 15 minutes early and who complete the journey in 25 hours.

Anyone not a member wishing to compete should apply to the honorary secretary, Mr. Southcomb May, 34, Gower Place, London, W.C.1, for a membership application form. These applications must be completed by Saturday, however. Entries for the run must be sent to Mr. F. T. Bidlake, M.C.C. Trials Secretary, 84, North End Road, Golder's Green, London, N.W.11.

# LONDON TO HOLYHEAD.

## Strenuous Week Event Traversing Welsh Mountain Passes Organised by the Ealing and District M.C.C.

FIFTY-FIVE entries, including motor cycles, three-wheelers, and cars, were received by the Ealing and District M.C.C. for its third annual trial from London to Holyhead.

The first man was despatched from Cranford Bridge at 12.1 a.m., the rest following at minute intervals. The route lay over main roads through Reading and Faringdon, where the first check was held, to Gloucester, where W. B. Gibbs was in charge of the second check; he also supplied the riders with coffee and sandwiches, which were appreciated.

G. E. Cuffe (5-6 Metro-Tyler) was dogged with ill luck throughout the trial, having suffered a burst rear tyre before reaching Faringdon; then his spare tube, which he carried in a haversack on his back, caught in his rear chain sprocket, throwing him off. F. R. G. Spikins (3½ Triumph) was passed on Birdlip with his carburetter dismantled, and was not seen again; also the Zenith-Bradshaws experienced oiled-up plugs after the descent of Birdlip Hill. Although rumour had it that the road surface from Gloucester to Hereford was in a shocking condition, it did not appear to be at all out of the ordinary, but misfortune in different ways befell many.

### About Dawn.

Cyril Pullin (350 Douglas) was observed sitting on a gate drinking coffee from his Thermos, but he was not seen again; F. J. Youngs (2¼ O.K.) discovered his platinum (alleged) points had burnt out, so fitted a new spare contact breaker complete, which he carried, and Mrs. Janson (2¼ Ner-a-car) burst her rear tyre, which made her late at Hereford, where one hour was allowed for breakfast.

Main roads led on to Rhayader, but before reaching this place F. S. Spouse (8 T.B.) retired with engine trouble, and Cuffe's front brake seized on, which resulted in a nasty fall. G. H. Goodall (8 Morgan) broke his rear brake band, and H. Beart (10 Morgan) had continuous trouble with his chains throughout the trial. Before reaching Rhayader several snowdrifts at the side of the road were passed, but fortunately this was all that was actually encountered, although the mountain tops were white in many parts. Within eight miles of the Rhayader check the first observed hill was ascended, but it did not cause much trouble, being dry and stony. It was announced in the final regulations that a secret check would be held somewhere between the last-named place and Bala, a distance of 88½ miles, which naturally made the competitors endeavour to keep to their schedule time. This, however, was difficult, as the road surface was in places appalling, added to which some nine water-splashes had to be negotiated. A. G. Wall (3 A.B.C.) hit a boulder and crashed with nothing more serious than water in his magneto, which he soon dried out; but H. C. Nias (3½ Ariel) made a splendid crossing.

### On the Mountains.

Passing by way of Devil's Bridge, the next check was held at Llanidloes, and then the most difficult section, scheduled at only 15 m.p.h., was started to Machynlleth, where one hour was allowed for lunch. Mrs. Janson (2¼ Ner-a-car) ran short of petrol near Stay-a-Little, but managed to obtain a supply. Hereabouts the route lay through several gates, which were closed, and over the mountain of Plynlimmon, with its rock-strewn, so-called road. Great havoc was wrought amongst the cars, the motor cycles coming through well, although several checked in late at Machynlleth. This section was doubtless severe, but in previous years the roads were wet, which added vastly to the difficulties in such circumstances. A good road now led on through Dinas Mawddwy to the dreaded Bwlch-y-Groes, where several gold medals were lost, as is usual on this hill.

W. S. Schooley, W. D. Pugh and V. Gayford, all on 3½ h.p. Zenith-Bradshaws, H. C. Nias (3½ Ariel), J. Hall (2¾ Trump), M. O'Reilly (3½ N.U.T.), H. W. Glendinning (4 Powell sc.), G. E. Cuffe (Metro-Tyler), S. A. McCarthy (8 Morgan), P. Pehrson (4 Dunelt sc.), all made good, steady climbs with all the solo Zeniths fast. Mrs. Janson (2¼ Ner-a-car) stopped, but with a great deal of foot slogging ultimately got up. A. Ward (2¾ Sirrah-Blackburne) put up a similar performance; S. E. Longman (3½ Zenith-Bradshaw sc.) was obliged to stop and shed his passenger. A. G. Wall (3 A.B.C.) was good, and F. J. Youngs (2¼ O.K.) came up slowly, emitting clouds of smoke. The secret check was at last found just over the summit from where the road was followed through Bala to the tea check at Bettws-y-Coed.

### Minor Collisions.

About here G. E. Cuffe in passing F. J. Youngs caught the latter's handle-bar grip, which resulted in the latter falling and hurting his leg; however, after straightening up footrests, handle-bars, etc., they were both able to continue. V. Gayford (3½ Zenith-Bradshaw), endeavouring to avoid someone on the road, hit a car while he was indulging in fast riding, which might have had very serious consequences. As it was, he was thrown from his machine with great force, but luckily only suffered a shaking. After tea the route continued on to Bangor (where Cuffe was at last obliged to retire with more tyre troubles) over the Menai Bridge and on to the final check which was held on the milestone reading "Holyhead two." In this trial the "sealed watch" system was used, as is usually done in the big Midland events. At time of going to press the results have not been announced, but the following are those who checked in at Holyhead:

S. E. Longman (3½ Zenith-Bradshaw sc.).
W. D. Pugh (3½ Zenith-Bradshaw).
V. Gayford (3½ Zenith-Bradshaw).
H. C. Nias (3½ Ariel).
Mrs. G. M. Janson (2¼ Ner-a-car).
T. A. Ward (2¾ Sirrah-Blackburne).
J. Hall (2¾ Trump).
W. S. Schooley (3½ Zenith-Bradshaw).
P. Pehrson (4 Dunelt sc.).
A. G. Wall (3 A.B.C.).
M. O'Reilly (3½ N.U.T.).
H. W. Glendinning (4 Powell sc.).
F. J. Youngs (2¼ O.K. Junior).
S. M. Greening (2¾ Coventry-Eagle).
G. H. Goodall (8 Morgan).
H. Beart (10 Morgan).
S. A. McCarthy (8 Morgan).

# A ROYAL MEETING AT BROOKLANDS.

ON May 20th the Essex M.C. will organise a race meeting at Brooklands, under the patronage of H.R.H. the Duke of York, K.G., who will be present during the meeting. There will be six car races and three motor cycle events: The Duke of York 3-lap junior handicap, for motor bicycles not exceeding 500 c.c.; the Duke of York 3-lap senior handicap, for motor bicycles not exceeding 1,000 c.c.; and the Essex 3-lap passenger machine handicap, for sidecars not exceeding 1,000 c.c. engine capacity, and cycle cars under 1,100 c.c. The distance in each case will be about 8½ miles. For the 1,000 c.c. solo race entries may be limited to machines capable of 70 miles per hour or more. Specially designed medals, commemorative of the occasion, the exclusive design of which will be approved by H.R.H. the Duke of York, will be awarded to the winners.

### Proceeds to Charities.

The proceeds of the meeting will be devoted to the funds of the Middlesex Hospital and the Industrial Welfare Society. The Appeal Committee consists of the Earl of Athlone, G.C.B., G.C.V.O., C.M.G., D.S.O., and Wing-Commander Louis Greig, M.V.O., representing the Duke of York, and a number of ladies and gentlemen prominent in the motor and motor cycle worlds. Tickets can be bought before the day for 4s., and the price of admission at the gates is 5s. To encourage advance booking a free gift of a 4 h.p. Harley-Davidson motor cycle, presented by Mr. Duncan Watson, will be awarded to a purchaser of an admission ticket before the day. Particulars of the scheme under which this machine will be awarded have not yet been announced. The hon. sec. is Mr. A. G. Reynolds, 95, Fillebrook Road, Leytonstone, London, E.11.

# OUR MIXED CLIMATE.

## Sutton Bank Hill Climb Postponed. Heavy Rain Makes Surface Impossible.

HOPES WASHED OUT. Disconsolate competitors, committee men, press men and spectators held repeated inquests on the state of the weather at the foot of Sutton Bank, the venue of the Yorkshire Centre A.C.U. hill climb last Saturday. Finally it was decided to postpone the event for one week.

SOUTHERNERS—and there were a number—who trekked northwards on Friday last in order to compete in the Yorks Centre Sutton Bank hill-climb on Saturday enjoyed a glorious ride under perfect weather conditions.
